Enter a CD universe. Where gameplay is larger, deeper, faster and broader. The new Sony architecture. Keen vision. Rich sound. Incredible graphics. Synapse-speed response.

Characters move freely in full 3-D environments. When your viewing angle changes, so does the background. That's true interactivity. If it's not real time, it's only a game.

Exclusive next-generation titles. All-time best-sellers. At launch and beyond. In spades. All taking advantage of the PlayStation's advanced power. And Sony will see to it that everyone knows.

All the technobabble: Double speed CD ROM, 32-bit, custom multiple processors for 3-D graphics and CD stereo quality sound. Full frame video at 30 frames per second. 16.8 million colors. 360,000 polygons per second. Dedicated custom 32-bit RISC CPU. 16 megabits of RAM, 8 megabits of V-RAM.
