This document refers to a box of technical reports in the Computer History Museum's collection, described under catalog number 102754121.
The following technical reports in this box have accompanying descriptions:

How to write a long formula
"Standard mathematical notation works well for short formulas, but not for the longer ones often written by computer scientists. Notations are proposed to make one or two-page formulas easier to read and reason about."

The third annual video review of computational geometry
"Computational geometry concepts are often easiest to understand visually, in terms of the geometric objects they manipulate. Static figures are not always adequate."
