

# Cincom Systems now leads in the world of Data Base and On-Line Control Systems.

Cincom's TOTAL is perhaps the most widely and successfully used Data Base Management System in North America. TOTAL is also said to be the system most closely paralleling the recommendations of such groups as the Guide-Share and the CODASYL Data Base Task Group.

And ENVIRON/1 is likely the finest performing and most advanced On-Line Control System available anywhere.

But successful products are just the beginning.

Cincom's ongoing commitment to service and support is unparalleled. And our people are often said to be the most knowledgeable and experienced anywhere in the industry.

Cincom, now in its fifth year of specialty in this important field of integrated information systems, *continues* to expand its support and service capability.

With support centers already strategically located throughout all of North America, Cincom now announces the formation of Cincom Systems International in order to directly serve our rapidly expanding European User Group.

But most of all, we're proud of the success of our clients — now more than 250 worldwide.

If you're thinking Data Base, or On-Line processing, or if you're thinking of an exciting career with the leading company specializing in advanced information processing systems, give us a thought. Better still give us a try.

**Cincom Systems Inc: We create efficiency.**
