Adobe Systems Incorporated 1989 Annual Report

Note Ref Bird in

Adobe Systems creates, markets and supports computer systems software and application software. The company's PostScript[®] page description language and extensive type library are industry standards, used for device-independent communication among computers, software, printers and typesetters.

Adobe's software products have made high-quality visual communication possible in personal computing. Technology developed at Adobe has effectively brought 500 years of printing and publishing techniques to computer users.

About the Front and Back Cover and page 12 illustrations:

Adobe Systems has grown into a true multinational company that is changing the way people print and publish around the world with its innovative technology and advanced products, as exemplified by these designs. Created by San Francisco designer Michael Cronan, the collages began as quick sketches. Assisted by Robert Schwarzbach, Cronan designed a simple template using Adobe Illustrator[™] software to unify the artwork, then added photographs to the template, and adjusted their color using the Adobe Photoshop[™] program. The images include visual references to Adobe Illustrator, Adobe[™] Collector's Edition: Patterns and Textures, and Adobe Streamline[™] software. To create the world of Adobe Systems, Cronan also incorporated images from this annual report and by photographers Doug Menuez, Rob Outwater, Rick Smolan and Russell Brown.

Fiscal Year Ended (in thousands except per share data)	Dec. 1, 1989	Nov. 30, 1988	Nov. 30, 1987	Nov. 30, 1986	Nov. 30, 1985

"Adobe continues to have a major impact on the integration of graphic arts and computers."

To Our Shareholders:

January 17, 1990

Software from Adobe has revolutionized computer printing and publishing. Products based on the company's PostScript language are now used routinely by individuals and corporations all over the world. Adobe continues to have a major impact on the integration of graphic arts and computers.

Our business environment is exciting. In 1989, Adobe announced significant new products. Relationships with current customers changed. And new customer relationships and markets formed.

More than 66 printer products based on PostScript software are currently shipping. These include a wide range of machines from over 30 manufacturers. In fact, nearly every major computer systems, printer and typesetter manufacturer now offers printing solutions from Adobe.

Adobe's Display PostScript[™] software is shipping in volume on both NeXT[®] and Digital workstations. This product brings our high-quality graphics technology to workstations and personal computers. With the industry-standard PostScript imaging model driving both printers and displays, computer screens match printer output as closely as possible. The machines are device independent, so customers gain the advantage of PostScript language file portability between applications running on a variety of different computers.

Adobe Type Manager[™] software, which is new this year, will bring Adobe typefaces to a very large new market. For computer systems and printer vendors, the software provides high-quality font scaling. Now these manufacturers can offer a consistent font strategy that works across all of their products—from low-cost printers through high-end PostScript printers and typesetters.

In the retail market, the Adobe Type Manager program brings high-quality scalable font software to customers' Macintosh® displays and low-cost, dot matrix and ink jet printers. Adobe Type Manager is compatible with the Display PostScript system and all PostScript printers.

The competitive environment for Adobe changed in 1989. Early in the year, Apple Computer announced that it would develop and release its own font scaling technology. In July, Apple sold its 3,423,792 share investment in Adobe, which it had held since 1984, and realized at least a 3,000percent gain on the transaction. Later in the year, Apple and Microsoft announced joint plans to support the Apple font technology. They did not announce products or provide availability dates.

In the face of these competitive events, Adobe accelerated its development of Adobe Type Manager software for the Macintosh and shipped the product in October. In the first six weeks, we shipped over 100,000 units. User support for the program has been exceptionally strong. We believe that the size and quality of the Adobe[™] Type Library, the quality of our type rendering, the device independence of the technology, and the broad appeal of Adobe Type Manager software will contribute to Adobe's continuing leadership position in both the Apple and the IBM[®] PC markets.

The Adobe Type Library nearly doubled in 1989, to include software for over five hundred typefaces. Adobe Illustrator[™]-Windows Version, for IBM personal computers and compatibles, began shipping in January 1989. We also introduced Adobe Streamline[™], software for the Macintosh and IBM PC that converts scanned artwork and other bitmapped images into PostScript language format.

In March, we announced a license agreement with Canon Inc. of Japan, the world's largest maker of laser printing engines. Adobe also agreed to license its font production technology to five major suppliers of high-quality typefaces: AGFA Compugraphic, Autologic, Monotype, Morisawa and Varityper. This will broaden the number of typefaces available for PostScript printers and typesetters.

The company acquired Photoshop, a color image processing program for Macintosh computers, last July. Adobe Photoshop[™] software, scheduled for release in February 1990, will enable graphic artists and desktop publishers to produce elaborate special effects photography.

Early in 1989, Adobe formed a subsidiary with an office in Tokyo. This subsidiary supports a strong systems business in Japan, as well as software developers working on applications that take advantage of the new PostScript Kanji printers. A Kanji version of Adobe Illustrator was introduced in May. As more software developers address this market, we expect to see steady, continued growth.

To strengthen ties with our customers in Europe, the company established a United Kingdom subsidiary in London. This office will complement Adobe Systems Europe B.V., our international subsidiary in Amsterdam. As Adobe and its customers bring our products to new markets, PostScript software is becoming an integral factor for electronic printing and publishing throughout the world.

New Products and Markets Contribute to Adobe's Growth

Adobe Type Manager smooths out "jaggies"—in print and on displays

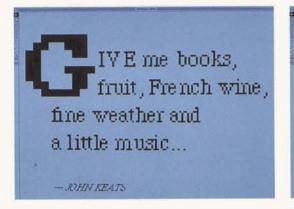

A new product for the Macintosh, the Adobe Type Manager program, brings PostScript outline font software to a broad range of printers and computer displays. Text on displays becomes sharp and readable at large and small point sizes.

PostScript software technology expands

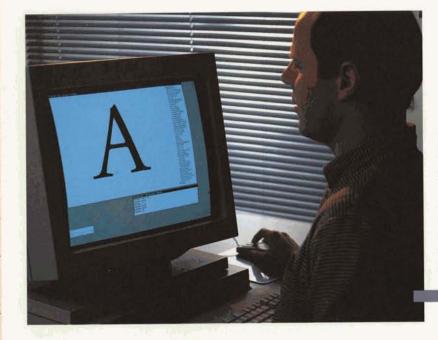

The company's advanced development team is working to improve quality, performance and language capabilities. They also design controllers to provide PostScript solutions for increasingly sophisticated workstations and printing systems.

Display PostScript ships

Adobe's Display PostScript system shipped in volume on both Digital and NeXT workstations in 1989. With the PostScript imaging model driving both displays and printers, screens match printer output.

Original typeface families increase design options

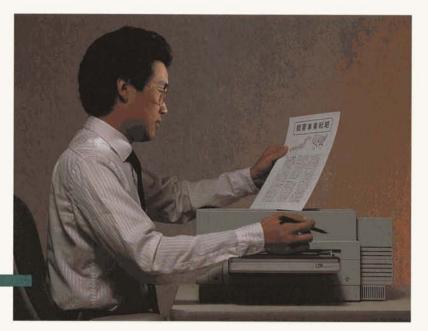

Adobe introduced Adobe Originals," a new line of professional typeface software designed by Adobe font developers. Quality type design is both an art and a science. Adobe type designer Robert Slimbach, pictured here, researched many renditions of a 16th-century design before creating the Adobe Garamond." typeface.

New products improve customers' text and graphics

These new application software products are helping Adobe continue to play a leading role in the electronic publishing market. Adobe's retail products build on the advantages of the PostScript language, and bring Adobe typeface software to a broad range of customers.

Adobe opens new markets in Japan Adobe formed a subsidiary with an office in Tokyo early in 1989. In May, the company shipped a Kanji version of the Adobe Illustrator 88 software program. Throughout fiscal 1989, several Adobe OEM customers, including Apple, Digital, Fujitsu and NEC, shipped PostScript Kanji printers.

Adobe Collector's Edition produces high-quality pattern art

Adobe Collector's Edition: Patterns and Textures shipped in January 1989. A fast, convenient alternative to the time-consuming process of applying rub-down or hand-drawn patterns to drawings, this software works with Adobe Illustrator 88 to enable architects, geologists and cartographers, as well as graphic artists, to shade and fill electronic art.

Color PostScript software debuts in new printers QMS introduced the first PostScript color printer in 1988. Agfa introduced the first color PostScript slide maker in 1989, and color printers featuring Adobe's PostScript software were announced by DuPont, Océ and NEC. Now artists, designers and publishers can produce and proof color compositions on a personal computer, then make color separations on a high-resolution PostScript typesetter.

The Impact of Adobe's PostScript Technology on Visual Communications

Ten years ago, this copy would have been written on an IBM Selectric⁻⁻⁻ typewriter. It would have been edited with a pencil, and perhaps retyped to be legible. The typed pages would be covered with cryptic notations for the typesetter, who would have to rekey the manuscript to appear in the specified typeface—a process that inevitably delayed production. Meanwhile, illustrations had to be drawn by hand with technical pens. Corrections took hours. Days passed before the "camera-ready" boards could be bundled up and shipped to the printer, who would transform the pages into their final, printed form.

Personal computers with word processing programs made writing faster and easier. People so appreciated the gain in productivity, that they were willing to put up with the monotonous appearance of computer text on word-processed documents.

Just five years ago, editors and art directors still marked copy pages with arcane instructions for the typesetter, although now they could send a computer disk along with the manuscript, so the files could be transferred electronically without retyping. Messengers continued to shuttle pages between the people who wrote the copy and those who set the type. All of the other steps of traditional printing and publishing remained the same. Publishing was a costly, time-consuming, labor-intensive process. And computers were used mostly for calculating and word processing.

Software from Adobe Systems changed all that—and revolutionized electronic printing and publishing. The company's PostScript page description language enables customers to create, print and transfer files among applications that run on a variety of computer systems. And Adobe's retail software products make high-quality typefaces and precision graphics possible in personal computing.

For example, each step in the production of this annual report involved Adobe products and technology. The copy was written with a popular word processing program in an attractive typeface from the Adobe Type Library. Thanks to Adobe Type Manager software, the type on the writer's computer screen looks almost identical to the type on the manuscript pages, which were proofed with a PostScript laser printer.

The writer used a modem to transmit electronic files of the manuscript to the designer, who was working on a personal computer at another location. The designer scanned 35mm slides, manipulated the scanned photos with Adobe Photoshop software, and proofed the results on a PostScript color printer. Additional artwork was scanned, then traced with Adobe Streamline software and modified in the Adobe Illustrator program. The designer selected type from the Adobe Type Library and used a popular page layout program to integrate the text and photos. Revisions were made immediately, and a PostScript color printer enabled us to proof the final draft. Adobe Separator[™] was used with a PostScript typesetter to make color separations onto black-and-white film; then the package was sent to a commercial printer.

Adobe puts the tools and information people need, including pre-press capabilities, within easy reach on the desktop. The frustrating limitations and inevitable delays of traditional publishing are becoming relics of the past.

The company's PostScript page description language tells computer printers how the type should look and how the page should be printed. An industry standard, the PostScript language provides seamless integration among the various computers and output devices. As a result, Adobe's PostScript language pervades every aspect of visual communications—including books, charts, maps, reports, correspondence, manuals, forms, brochures, newsletters, posters, ads, packaging, slides, overhead transparencies, spreadsheets, diagrams and illustrations.

Today, nearly every major computer systems, printer and typesetter manufacturer offers Adobe PostScript printing solutions. Because the PostScript language is the industry standard for device-independent communication, corporate customers can transmit text and graphics to PostScript printers, typesetters, film recorders and computer displays throughout the world. This makes business communications, as well as professional publishing, faster, easier and more cost-effective than ever before.

RESULTS OF OPERATIONS

Total revenue for the Company grew rapidly during the three years ended December 1, 1989. The Company's original equipment manufacturer (OEM) customers continued to develop and market new printers, typesetters and other output devices incorporating the Company's PostScript interpreter. During the past three years these products have continued to have strong sales, which have produced a significant growth in royalty revenue. In fiscal 1987, eight customers were paying the Company royalty revenue. In fiscal 1988 royalty-paying customers increased to 13, and at the end of fiscal 1989 there were 19 customers paying royalties to the Company. During fiscal 1989 several of the Company's OEM customers began shipping Japanese-language PostScript printers capable of printing Kanji characters for the Japanese market. While this activity was of relatively modest size in fiscal 1989, the Company believes that this market will be a source of growing

future revenue and has invested heavily in development and sales activity to support its Japanese and domestic OEMs that ship into the Japanese market.

Apple Computer continued to be the single largest royalty paying customer. However, its share of the Company's total revenue has continued to decrease from 49% in fiscal 1987 to 33% in fiscal 1988 and 25% in fiscal 1989. The Company's other OEM customers have increased their share of the Company's total revenue, although no other customer accounted for greater than 10% of the Company's total revenue in fiscal 1989. One additional customer accounted for 10% of the Company's total revenue in 1988.

In May 1989, Apple Computer announced that it would offer its customers its own font format in future versions of its operating system rather than support only Adobe's. In July, Apple Computer sold its 16.4% common stock position in the Company in an unregistered, underwritten transaction. At that time, the Company purchased 300,000 shares of its common stock from the underwriters at the offering price of \$24¹/8. In September, Apple Computer and Microsoft Corporation announced that Microsoft had licensed the Apple font format for use in OS/2 under the Presentation Manager and that Apple had licensed Microsoft's implementation of the PostScript language, obtained as part of a recent Microsoft acquisition. There were no products announced at that time. However, if Apple introduces printers utilizing Microsoft's interpreter and these printers gain popularity, it is possible that royalty revenue to the Company from Apple could decrease over time.

Revenue from the distribution of software application products for the end user has grown rapidly during the last three years. In fiscal 1987, this activity accounted for \$10.3 million increasing to \$19.3 million in fiscal 1988; in fiscal 1989 these revenues grew to \$34.7 million. The Company introduced new products each year during this time, and increased the number of downloadable typeface programs for the Apple Macintosh and IBM personal computer. In October 1989 the Company began shipping Adobe Type Manager program is a systems-level software product that is distributed primarily through the Company's dealer/distributor channel. This program reduces the jagged characters or "jaggies" commonly seen with bitmapped type, both on the Macintosh screen and on non-PostScript printers like the Apple Imagewriter.

In 1989, the application products business experienced a higher rate of revenue growth than the royalty business. The Company expects this trend to continue in fiscal 1990.

In 1987, the Company opened its European headquarters in Amsterdam, The Netherlands, to manage distribution of the Company's application products in Europe. Adobe Systems Europe B.V. has contributed significantly to the application software product revenue growth in fiscal years 1988 and 1989. The European office has also expanded sales and support activities for the Company's European OEM customers and domestic OEM customers selling their products in Europe.

In fiscal 1989, the Company opened an office in Tokyo, Japan to provide sales and support activity. Agreements have been signed with five major OEMs in Japan thus far.

Direct costs comprise packaging, diskettes, and shipping for application software products as well as royalties paid to third parties for typeface designs that are distributed as downloadable software packages or bundled with PostScript interpreters. Royalty expense is generally paid on a per-unit basis whereas royalty revenue can reflect volume discounts. Therefore, direct costs as a percentage of revenue can increase as an OEM customer ships more printers. The Company capitalizes its typeface production costs and amortizes them over a three-year period. Direct costs have increased during the three years due to the growth in the Company's business.

Research, development and contract costs have increased during the three years ended in fiscal 1989 as a result of additional staff and facilities. Hardware and software engineers have been hired to meet the needs of the Company's growing customer and product base. In fiscal 1989, the Company's research, development and contract costs increased as a percentage of revenue as the Company decided to increase its expenditures in this area to service the development needs of its customer base, extend its existing technology, and develop new technologies and products for the future. The Company expects that spending in this category will continue to grow to extend the Company's technologies and product offerings.

Sales, marketing and customer support expenses increased rapidly during fiscal years 1987 and 1988, reflecting additions to the sales and marketing staffs. During fiscal 1989, these expenses increased overall, but decreased as a percentage of revenue from the prior two fiscal years. This was largely due to a slowdown in the rate of increases in sales and marketing staff, and to reduced growth rates in expenditures for public relations and advertising. In addition, certain personnel formerly in sales, marketing and customer support were transferred into general and administrative departments. The Company continued to hire personnel in sales, marketing and customer support during 1989 and expects to continue to add to its staff in these areas in the future.

General and administrative expenses increased during the three years from 1987 through 1989, due to the increase in revenue, transaction volume and personnel. The Company moved into new facilities in fiscal 1987 and 1988 and added a third major building to its facilities late in fiscal 1989. The Company also acquired a new operations and administrative computer hardware and software system in fiscal 1988. The systems were implemented domestically in fiscal 1988 and in the Company's European operation in fiscal 1989, requiring higher expenditures for systems consulting services. The Company expects general and administrative expenses to grow proportionately with revenue.

Interest income of \$3,242,000, \$1,588,000 and \$767,000 for the years ended December 1, 1989, and November 30, 1988, and 1987, respectively, was earned on the Company's short-term investments and cash balances. The Company's cash and short-term investments have increased each year as its operations remain profitable and its capital equipment expenditures remain relatively modest.

The Company's 1989, 1988 and 1987 effective income tax rates were 38.6%, 41.0% and 46.8%, respectively. For an analysis of the differences between the statutory and effective income tax rates, see Note 6 to the Consolidated Financial Statements. Overall tax rates declined between 1987 and 1988 due to statutory rate changes. The Company adopted Statement of Financial Accounting Standards No. 96, "Accounting for Income Taxes," in fiscal 1988. Adopting this standard did not result in a material adjustment to the Company's financial statements.

In fiscal 1989 the Company changed to a 13-week quarter accounting period from its prior practice of ending each quarter on the last day of the last month of the quarter. This did not result in a material difference in the Company's financial statements from prior years. Inflation has not had a significant impact on the Company's operations.

FINANCIAL CONDITION

Total assets of the Company increased to \$94,139,000 at the end of fiscal 1989, compared to \$65,460,000 in fiscal 1988 and \$32,302,000 in fiscal 1987. Working capital increased to \$43,245,000 in fiscal 1989, and at the end of fiscal years 1988 and 1987, it was \$32,525,000 and \$17,543,000, respectively. At the end of fiscal 1989, deferred revenue was \$7,668,000 compared to \$6,082,000 in fiscal 1988 and \$629,000 in fiscal 1987. A large part of the increase in fiscal 1988 was accounted for by an advance against royalties from one OEM customer for the Company's Display PostScript system. The increase in fiscal 1989 was due to additional royalty advances from new and existing customers for new projects.

The Company's cash and short-term investments have grown to \$49,666,000 in fiscal 1989 from \$35,176,000 in fiscal 1988. In addition to the 300,000 shares of its common stock that the Company purchased from the underwriters at the time Apple sold its Adobe stock, the Company's Board of Directors authorized the Company to repurchase in the open market up to \$15,000,000 of the Company's common stock. As of January 15, 1990, the Company had repurchased 780,000 shares of its common stock at an average share price of approximately \$16¾.

In fiscal 1988, the Company's Board of Directors elected to pay a cash dividend of \$.04 per common share for each of the Company's second, third and fourth fiscal quarters. In the first quarter of fiscal 1989, the Company's Board of Directors increased the cash dividend on its common shares to \$.05 per share and paid that same dividend rate during each of the subsequent quarters in fiscal 1989.

Notes to Consolidated Financial Statements

December 1, 1989, November 30, 1988 and 1987

NOTE 1. SIGNIFICANT ACCOUNTING POLICIES

Basis of Presentation.

Adobe Systems Incorporated (Adobe or the Company), formed in 1983, designs, develops and markets systems and application software used to print integrated text and graphics for high-quality electronic printing and publishing applications. The accompanying consolidated financial statements include those of Adobe and its wholly owned subsidiaries, Adobe Systems Europe B.V., Adobe Systems Japan and Adobe Systems U.K. Ltd., after elimination of all significant intercompany accounts and transactions.

Statements of Cash Flows.

Cash equivalents consist of highly liquid money market instruments purchased with a maturity of three months or less and are carried at cost, which approximates market.

Short-term Investments.

Short-term investments are carried at cost, which approximates market. At December 1, 1989, short-term investments consisted principally of municipal bonds, commercial paper, bankers' acceptances, money market preferreds and treasury notes.

Inventory.

Inventory is stated at the lower of cost (first-in, first-out basis) or market (net realizable value).

Property and Equipment.

Property and equipment are stated at cost less accumulated depreciation and amortization. Depreciation is provided on the straight-line method over the estimated useful lives of the respective assets, generally three to eight years. Leasehold improvements are amortized using the straight-line method over the lesser of the lease term or the estimated useful lives of the related assets, generally five to nine years.

Typeface Production Costs.

Typeface production costs, less \$3,859,000 and \$1,963,000 accumulated amortization in 1989 and 1988, respectively, comprise direct and indirect costs associated with the production of typefaces to be used with the PostScript* interpreter. These costs are amortized on a straight-line basis over the expected product life cycle, generally three to four years, commencing with the market release of each new typeface software program.

Revenue Recognition.

Royalties earned from original equipment manufacturers (OEM) relating to licensing agreements whereby the OEM licenses Adobe's proprietary software for redistribution to the OEM's end-user customers are recognized when the OEM ships its products incorporating Adobe's software.

Product sales comprise shrink-wrap licenses of new typeface software, and application software such as Adobe Illustrator, Adobe Type Manager and Adobe Streamline. Revenue from product sales is recognized upon shipment.

Contract revenue relates to Adobe's performance under contracts entered into with the Company's OEM licensees which normally stipulate that Adobe will provide the research and development required to adapt the Company's software products to the OEM's hardware products. Revenue on such contracts is recognized based on a modified percentage-of-completion method. The costs incurred in performing under the contracts are included in research, development and contract costs in the accompanying consolidated statements of income. Deferred revenue comprises payments received in advance of revenue recognized on the aforementioned contracts and payments received representing royalty advances.

Direct Costs.

Direct costs comprise royalty fees payable by Adobe, that are accrued concurrent with the Company's recognition of revenue, amortization of typeface production costs, direct product costs and the costs of packaging and shipping.

Income Taxes.

The Company accounts for income taxes in accordance with SFAS No. 96. Deferred tax liabilities or assets at the end of each period are determined using the tax rate expected to be in effect when taxes are actually paid or recovered.

Investment tax credits and research and experimental tax credits are accounted for on the flow-through method.

Net Income Per Share.

Net income per share is computed based upon the weighted average number of shares of Common Stock and Common Stock Equivalents outstanding during each year. The determination of Common Stock Equivalents assumes exercise of those outstanding stock options which have a dilutive effect on earnings per share. Fully diluted earnings per share for the years ended December 1, 1989 and November 30, 1988 and 1987 were not materially different than primary earnings per share.

Foreign Operations and Currency Translation.

The functional currency of the Company's foreign operations is the U.S. dollar. Accordingly, gains and losses arising from the translation of foreign currency statements and transactions are included in determining net income. Net gains or losses from currency translation were not significant.

Reclassifications.

Certain amounts in the 1987 consolidated financial statements have been reclassified to conform with the 1989 and 1988 presentation.

NOTE 2. RECEIVABLES A summary of receivables follows:

Royalties	\$ 14,915,000 \$	11,549,000
Product sales	7,760,000	2,795,000
Interest	569,000	312,000
Other receivables	1,055,000	162,000
	24,299,000	14,818,000
Less allowance for doubtful accounts	280,000	206,000
	\$ 24,019,000 \$	14,612,000

1989

1989

1988

1988

NOTE 3. PROPERTY AND EQUIPMENT

A summary of property and equipment follows:

\$	10,835,000 \$	6,866,000
	1,322,000	1,322,000
	4,191,000	3,363,000
	1,004,000	603,000
	17,352,000	12,154,000
	7,795,000	4,063,000
\$	9,557,000 \$	8,091,000
	\$	1,322,000 4,191,000 1,004,000 17,352,000 7,795,000

NOTE 4. LINE OF CREDIT

The Company has available a \$5,000,000 unsecured bank line of credit that expires on March 30, 1990. Interest on borrowings is at the bank's reference rate (prime rate).

NOTE 5. ACCRUED EXPENSES

A summary of accrued expenses follows:		1988
Rent	\$ 1,970,000	\$ 1,367,000
Royalties	4,355,000	3,116,000
Officers' and employees' bonuses and commissions	1,252,000	895,000
Vacation and benefit plans	1,732,000	858,000
Accrued license fee	975,000	-
Other	5,697,000	1,926,000
	\$ 15,981,000	\$ 8,162,000

NOTE 6. INCOME TAXES

The components of income tax expense are as follows: Current:

845,000 5,045,000	11,312,000 \$ 95,000 3,255,000	6,370,000 — 1,534,000
 23,227,000	14,662,000	7,904,000
(1,970,000) (110,000)	(44,000) 52,000	(79,000) 85,000
 (2,080,000)	8,000	6,000
\$ 21,147,000 \$	14,670,000 \$	7,910,000
\$	5,045,000 23,227,000 (1,970,000) (110,000) (2,080,000)	5,045,000 3,255,000 23,227,000 14,662,000 (1,970,000) (44,000) (110,000) 52,000 (2,080,000) 8,000

1989

1988

1987

Total income tax expense differs from the expected tax expense (computed by applying the U.S. Federal income statutory tax rates of 34% in 1989 and 1988, and the 41% weighted average rate in 1987 to income before income taxes) as follows:

	1989	1988	1987	
Tax at Federal statutory rate State income taxes, net of Federal benefit Other	\$ 18,650,000 3,257,000 (760,000)	12,155,000 2,183,000 332,000	\$	6,926,000 955,000 29,000
	\$ 21,147,000	\$ 14,670,000	\$	7,910,000

In 1989 and 1988, deferred income tax represents the effect of changes in the amounts of temporary differences. For 1987, deferred income tax resulted from timing differences in the recognition of income and expense for tax and financial reporting purposes. The sources and tax effects of the temporary differences for 1989 and 1988 and timing differences for 1987 are presented below:

	 1989	1988	1987
Typeface production costs	\$ (91,000) \$	298,000	\$ 642,000
Tax depreciation differences	(375,000)	25,000	(20,000)
State income tax deduction	(166,000)	(520,000)	(421,000)
Accruals, allowances and reserves	(401,000)	238,000	(226,000)
Deferred revenue	(962,000)	-	
Other	(85,000)	(33,000)	31,000
	\$ (2,080,000) \$	\$ 8,000	\$ 6,000

NOTE 7. CAPITAL STOCK

The Company has authorized 2,000,000 shares of Preferred Stock and 50,000,000 shares of Common Stock. The Company effected two-for-one stock splits on November 15, 1988 and February 27, 1987. All references to common shares and per share amounts in the accompanying consolidated financial statements have been retroactively adjusted to reflect these stock splits.

The Company adopted an Employee Stock Purchase Plan on January 1, 1988. Under the terms of the plan, eligible employee participants purchase shares of Common Stock semiannually at the lower of 85% of the market price on either the purchase date or the offering date.

At December 1, 1989 the Company had reserved 5,000,000 shares of Common Stock for issuance under its 1984 Stock Option Plan. This plan, which was amended in 1987 to exclude non-employee directors, provides for the granting of stock options to employees and officers at the fair market value of the Company's Common Stock at the grant date. Options granted prior to January 1, 1988 generally vest over three years: 25% of the granted options at the end of each of the first two years and 50% at the end of the third year. Options granted to employees hired subsequent to December 1, 1987 generally vest over three years: 25% at the end of the first year, 25% pro rata during the second year and 50% pro rata during the third year. Options granted to existing employees subsequent to December 31, 1987 also vest over three years: 25% pro rata during each of the first two years and 50% pro rata during the third year. All options have a five- or ten-year term. The following table summarizes option activity under this plan:

Options Outstanding

Shares Available Price for Grant Shares per Share Balances at November 30, 1987 981,112 1,804,798 .08-11.25 \$ Increase in shares reserved 200,000 Options granted (1,069,000) 1,069,000 12.13-22.38 Options exercised (252,832) .08-17.00 Options cancelled .08-18.81 75,250 (75,250) Balances at November 30, 1988 187,362 .08-22.38 2,545,716 S Increase in shares reserved 1,000,000 Options granted (995,250) 995,250 16.50-18.75 Options exercised (315,320) .08-20.88 Options cancelled .13-28.50 167,474 (167,474) Balances at December 1, 1989 359,586 3,058,172 \$.08-21.35 (933,197 shares exercisable)

During 1987 the Company adopted the Restricted Option Plan which provides for the granting of nonqualified stock options to non-employee directors and outside consultants. Option grants are limited to 5,000 shares per person in each fiscal year and are immediately exercisable within a ten year term. The restricted options vest over three years; 25% of the granted options at the end of the first two years and 50% at the end of the third year. At December 1, 1989 30,000 options were outstanding under this plan, of which 7,500 are vested. During 1989 the Company adopted a Restricted Stock Plan which provides for granting of restricted stock to officers and key employees. Shares issued under this plan vest annually over three years, but are considered outstanding at the time of grant as the

NOTE 8. MAJOR CUSTOMERS

One customer accounted for 25%, 33% and 49% of Adobe's total revenue for 1989, 1988 and 1987, respectively. Receivables from this customer aggregated approximately \$5,352,000 at December 1, 1989. On November 30, 1988 this customer was also a major shareholder, owning approximately 16.4% of shareholders are entitled to dividends and voting rights. At December 1, 1989, 129,000 shares had been granted to officers and key employees 2,750 of which were vested. Compensation expense, which accrues as the shares vest, approximated \$366,000 in fiscal 1989.

the Company's common shares. During 1989, this customer sold all of its Adobe common stock in an unregistered, underwritten offering. A second customer accounted for 10% of the Company's total revenue in 1988.

NOTE 9. SUPPLEMENTARY INCOME STATEMENT INFORMATION

The following items are included in costs and expenses in the accompanying consolidated statements of income:

	1989	1988	1987
Maintenance and repairs	\$ 892,000	\$ 459,000	\$ 297,000
Depreciation	3,732,000	2,087,000	1,051,000
Amortization of typeface production costs	1,896,000	1,224,000	570,000
Royalties	12,605,000	9,634,000	3,484,000
Advertising	3,153,000	2,046,000	1,647,000

NOTE 10. COMMITMENTS

The Company has operating leases for the corporate headquarters, field sales offices and certain office equipment that expire at various dates through 1996. Rental expense for these operating leases was \$3,309,000, \$2,123,000, and \$1,064,000 during the years ended December 1, 1989, November 30, 1988 and 1987, respectively. At December 1, 1989 future minimum lease payments under noncancellable operating leases were:

	1990	\$ 4,839,000
	1991	4,274,000
	1992	4,107,000
	1993	3,998,000
	1994	3,937,000
	1995 and thereafter	6,817,000
Total mit	nimum lease payments	\$ 27,972,000

During 1988 the Company entered into capital lease agreements for computer software, furniture and equipment aggregating \$1,514,000. At December 1, 1989 future minimum lease payments under these agreements aggregated \$915,000 and are payable over a three-year period.

Independent Auditors' Report

To the Board of Directors and Shareholders Adobe Systems Incorporated:

We have audited the accompanying consolidated balance sheets of Adobe Systems Incorporated and subsidiaries as of December 1, 1989 and November 30, 1988, and the related consolidated statements of income, shareholders' equity and cash flows for each of the years in the three-year period ended December 1, 1989. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with generally accepted auditing standards. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion. In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Adobe Systems Incorporated and subsidiaries, as of December 1, 1989 and November 30, 1988, and the results of their operations and their cash flows for each of the years in the three-year period ended December 1, 1989, in conformity with generally accepted accounting principles.
