Stealth Group Meeting:

New Shift in Emphasis in Project

April 10, '58

2,10,000 → 162,000 transistors at least

5 x SIGMA substantially cheaper

2 machines (70X-5)

Sigma Stretch?

Beyond 700 only?

- Multiprogramming in 4 to 6 machine? (need 4 to 10 times 70X)
- "Sigma"? - still same only?

- Real time applications

Sigma for large scale?

1. We must examine changes desirable big middle or end of next week
   look over shift, etc., etc.

2. 709-5 vs. junior application? - compare costs,
   "stripped" junior - reduced more checking.

What shall be done to improve Prod. Planning in general?
