

- CPC

- compute freedom; binary or decimal representation, word length, serial or parallel
(cabling & I/O interlock systems decided in advance)
cable everything with 8 wires - 8 bit bytes or less,

- read in pattern of bits to organize the machine

no special physical elements - use mem to store the structure,

- can change machine from one model to another in seconds -

- lends programming codes which increase word length automatically,

- "soft control" mode - floating pt.

fault diagnosis - ultimate diagnostic procedure

← binary
programs
the control

free to specify an organization for auto programming

- new level of flexibility would be introduced

construct a machine to assist them.

universal I/O buffer

SP104

contribute to research in new programming - research in new hardware
