a switch which when thrown
● will to you automatecly to ~~some~~

a certain storage (predetermined or

built in) to get the next instruction

and will preserve the loc of order

just excutitudeal.

Use ~~████~~ ~~████~~

●   Will enable a person to

to to a tracing program when

things seen to be fouling up.

Not for the machine (?) but

● for an assembly program.

• to be able to code in a simple

2 or 3 address system such as
was on the CPC #1 board.
but also have the same features

as on 870.

● Use faster coding of algebraic
equations and could be less
time spent in thinking on this coding
