T. L. Smith
J. B. Wyatt

The meeting was called to hear Dr. Kolsky present a description of the STRETCH computer system.

The standard Los Alamos configuration was described emphasizing the floating point operations on scientific problems. The sparce matrix problem using logical connectives was described since CONVAIR has many matrix problems arising in airframe and missile design.

There were a number of questions concerning details of operation codes and performance. They were also quite interested in reliability.

Several members of the above group are presently writing a report on future computing needs and plans of CONVAIR. They seemed to be happy to receive this information on STRETCH to include in their report.

H. G. Kolsky
Product Planning Representative
Project 7000
