MEMO TO: Mr. R. E. Merwin

SUBJECT: Revised Simulator Report

Enclosed is a copy of our most recent timing simulator report. Most of the results are based on a revised version of the Simulator which more nearly approximates the real machine.

I want to commend Mr. B. L. Madden for the excellent job he has done on this project. He tackled the problem of learning the logic of the code with perserverance, and worked out the details of the revision with a minimum of supervision. At present he is starting on some further more involved changes.

I certainly appreciate the help he has given me and appreciate your having assigned him to the project. I hope we can continue the arrangement for several months more.
