ASHTON-TATE'S dBASE III AND FRAMEWORK

NOW AVAILABLE FOR THE DATA GENERAL/ONE

CULVER CITY, Calif., March 26, 1985 -- Ashton-Tate, a leading software publisher, announced today that dBASE III and Framework are now available for the DATA GENERAL/One portable personal computer.

dBASE III, a powerful relational database management system, allows users to develop customized application programs that put the database files to work.

Framework is a multi-function productivity software program that can produce documents containing graphs, outlines, text, spreadsheets and database information. Framework also offers a high-level programming language, and a telecommunications module.

"Ashton-Tate is looking forward to a long-term strategic alliance with Data General," said Carl Gritzmaker, vice president of sales for Ashton-Tate. "We feel that the DATA GENERAL/One is a significant new machine that's a forerunner of the future of personal computers.

(more)

"As executives become more mobile it is increasingly important to have computers available at all locations, and that is now possible with machines like the DATA GENERAL/One."

Agnes Imregh, manager, third party software acquisitions group, Desktop Division, Data General said, "The addition of these highly-regarded products is significant for the DATA GENERAL/One. Framework offers the best of all possible worlds in providing a thoroughly integrated, complete solution for the needs of the office professional. dBASE III, following on the success of dBASE II, is another fine example of Ashton-Tate's strength in the development of database management systems."

Data General will distribute dBASE III and Framework through the company's authorized dealer and direct sales channels, as well as through its value-added reseller network.
