SUBJ: OVERHEAD IN ENGINEERING

The Operations Committee is becoming very concerned about increasing overhead in the Corporation. We are particularly concerned that there is much more management coordination, scheduling, marketing, surveying, and meeting going in the Engineering Department at the cost of engineering.

We would like to get a feeling for this and we would like to have you collect some data for two to four weeks. During this short period of time will you please have a secretary to the manager of each project, about three o'clock on Friday afternoon, collect from each of the Engineers an estimate of the time they spent on actual engineering during that week, and how much time on other activities such as attending meetings, coordinating and collecting opinions. For this survey we would consider all supervision as being overhead, and only actual design as direct labor. We are not all that interested in actual time and the Engineer's offhand opinion is good enough. We can then have the secretaries telephone the information in to some centralized point where they can be added up. By doing this we will get a feeling for what is happening and we can check it again later to see if we are getting better or worse.

/ma

52

Ken is about to distribute this. See my attachment. I would hope numbers would Come out to about 50% - although this may be high considering whites, what I want to do is measure the # of people in overhead positions versus the producers (project-criticity) for starters by Walking down the organ patient tree. To get abound on the problem. 12 month stall JB N motor ١ ,815 7 49 57 .86 400 734 343 8575 2401 2801 16907 5 19408

SUBJ: DEVELOPMENT	OF YOUR REPORTING SYSTEM	TO OPERA	TIONS C	OMMITTE	

As you develop your system for reporting to the Operations Committee, will you work out a system so that each manager can report each period how many hours of his engineering time were spent on projects approved by the Operations Committee, how many were spent on other projects, and how many were overtime.

There is a feeling that a good percentage of our engineering time is spent in making proposals or on unapproved projects, and it would be a good idea to make the situation clear.

SUBJ: CENTRAL ENGINEERING

I have received feedback that the following issues should be considered in reorganizing Central Engineering:

- Product Managers are significant to a strong Central engineering function. Today, the people to perform these jobs either don't exist or are spread throughout the Company. The alternatives are:
 - Permit and encourage a draft of key guys a) into the Central group.
 - ь) Approve the funds to go outside to hire these people.
- 2. Names must be put on the System Manager jobs under Dick Clayton. The ones I've heard most often are:
 - PDP-8 -- Peters a)
 - Small 11 -- Delagi/Teicher Ь).
 - c) Medium 11 -- Delagi/Arulpragasam
 - d) Large 11 -- Demmer
 - New Ideas -- Stockebrand e)

I gather that everyone feels comfortable with the PDP-10 Systems continuing in the Product Line Organization.

- Some time should be spent considering how the following 3. Software functions fit into the Centralized concept:
 - Software Engineering Operating Systems Languages Diagnostics

Applications

- Field Support
- Unique Product Line Software (including PDP-10)
- Enough people have mentioned it so I believe we need a voting 4. rule for the Products Committee. The issues are (1) who votes, and (2) how many votes does it take to approve a plan?
- 5. Can we add up the Company parts by Products as well as Product Lines (markets).

= Proposed New Operations Committee plus Ken

ORGANIZATION

- 1. Matrix Organization of Systems & Component Managers
- 2. Systems Groupings:
 - a) 8s
 - Ь) Small
 - c) Medium
 - 'd) Large

3. System Manager's Internal Line Responsibilities:

- a) CPUs and Option Design
- b) Systems Definition and Engineering
- c) Organization consisting of System Engineers and Product Managers
- 4. Component Manager's Line Responsibilities:
 - a) Initiates Product Plan
 - b) Introduces Products into Manufacturing
 - c) Sets and Achieves Cost and Reliability Goals
 - d) Organization consisting of Product Managers, Project Engineers and Engineering Managers
- 5. Formal Plans include:
 - a) Component and System Manager prepare 3 year Product"Possibilities" List.
 - b) Product Lines prepare Product Wish List
 - c) System Manager publishes System Goals
 - d) Component Manager proposes Product Plan in the context of the Funding Algorithm. He occupies a strong position and is not "told what he will do."
 - e) Component and System Managers operate in the context Final Plans approved by the New Products Committee.
- 6. New Products Committee approves Plans subject to Operations Committee veto.a) Consists of:

Engineering Vice President and Staff Component Manager Systems Manager Software Manager Manufacturing Representation Product Line Representation

- b) Utilizes Specialized Steering Committees and Task Forces
- 7. Woods meetings used for communication and feedback, but not to approve Plans.
 - a) Separate meetings for small, medium and large limited to people with direct interest.
 - b) Meetings might also be held for major components such as disks, tapes, etc.
- Specific "open door" Appeal System to Operations Committee to openly challenge formally approved Plans and propose alternatives.

FUNDING

- 1. Derived from tax on Products to be sold.
- 2. Charged to Product Lines as part of Product Transfer Cost.
- 3. Portion off top for New Products and Manufacturing Engineering (probably 1/2% and 1/2% respectively).
- 4. Remainder, at first approximation, allocated to development of products which incurred tax.
- 5. Managers propose changes and work out differences which Products Committee approves.
- Product Lines can engineer their own products if they are not satisfied with what Central Engineering is doing but, in addition to Central Tax.

SUBJ:

PIECES, CONSTRAINTS, COMMENTS on New Organization Regarding the organization: a rating of the groups and the organization is attached from the Board report, together with my ranking of the engineering managers. It is a <u>gut feel</u> and shouldn't be used except as a starting point for an alternative ranking. We could do it more scientifically a la Hay on technical, span, and personal criteria together with results.

I want to enumerate the problems which an organization may solve. My gut reactions about some of the product problems (along with the 10 in the BOD report) which might be worked are:

- 0. Better product/market product line interface in determining product strategy. Is the Products Committee doing enough?
- 1. Hardware-software interface. We're a bng way from building systems.
- 2. Software organizational strengthening. I don't believe the myth that software can't be done outside the software group. I believe that the better products only come from outside, and only when not too closely coupled to the group. The great products are few and far between. I believe we may have a dependency relationship here that I'd like to see us get out of. Larry and Dave are the only 2 people who have any visibility within the company. There has been no lower level alternatives to do either of their jobs. Things are getting better here.
- 3. Product line use of standard new products just doesn't seem to be happening in any non-trivial way (e.g. VTXY).
- 4. Tremendous phasing problems a la TU60 for systems that involve a peripheral that causes a controller(s), that causes the software, that causes some market utilization. (See my BOD report on this case study.)
- 5. Product line planning in any non-trivial way for something in the good tools and bordering on turn-key systems.
- 6. An environment that seems to impede getting into new systems (e.g. Point of Sale) or entering new PL's (e.g. consumer). Our remnant PL's aren't big enough markets (e.g. lab) but won't change.

September 27, 1973 Pieces, Constraints, Comments

- 7. We aren't thinking about deep applications in the PL's.
- 8. Poor packaging, power supply, cooling cabling as an integrated whole.
- 9. Poor integration of production plans with PL's in memory area. Both memory engineering and manufacturing are too distant.
- 10. Body of knowledge to get us semiconductor components are in Gale's area now. Where do we want it? central? We have to get some real experience here to follow the semiconductor technology on which the goodness of our new products depend!
- 11. There is a critical mass associated with central, highly technical engineering groups like testors (about 75 people), power supplies(10), packaging and components. How do we cope here?
- 12. I believe we are missing some pieces of a balanced organization.
 - A. Advanced applications (mostly software, but also packaging and some hardware)--I may want this.
 - B. Systems groups with both hardware and software.
 - C. Networks...not clear yet.

the former of the

- D. Semiconductor component technology.
- 13. The non-integration of terminals drives me especially crazy. Little innovation in LA, GT, and RT areas. Non-coordination between VT and LA for cassettes has to be solved. I want them all coupled.
- 14. Better manufacturing-engineering interface, but with more capability to manufacture with a deeper understanding.

G. Bell 9/26/73

ENGINEERING MANAGERS

- l Puffer, Saviers (y)*
- 2 Clayton, Delagi(y), Teicher(Y), Tays, Stone*, Wilhelm, Portner
- 3 Van Roekens(y), <u>Conklin</u>, Fagerquist, Stockebrand (Y), St. Amour, Corell(y), Savell, Cudmore
- 4 Hughes(y), Ellson(y), Horovitz, Hurley, Gale, Amann, Moffa
- 5 Milton, Bastiani(y), Clarke, Eggert(y), Halio, Rey, O'Connor, Nevala, Cajolet
- 6 Lawrence(staff), Melvin
- 7 No data--Atterbury, Ball

In thinking about the organization, I tried to rank (categorize) our engineering managers.

 * (y) means young; unreliable estimate or hunch on my part. The <u>underlined</u> ones are software engineers--there aren't many. We are in trouble here, since our future depends significantly on software.

Comments on Organizational Groups

G.Bell

8/73

8 - Came from a technician based organization to a balanced group. Heavy support required in Puerto Rico. No significant products yet. Ultra Conservative due to problems. Significant magnetic tape control problems.

8/B - Came up fast in learning about LSI and designing with it. (Approx. 1 year old). Highly stimulated. Relatively fat.

11 - small - Highly motivated. Must learn LSI. Must do total repackage and are concerned.

11 - large - Follow on to 11/45 needs direction. Significant addressing problems
in 11/45.

11 - reliability - Room for good work. No data.

11 - systems - Room for good work. No data.

11 - options - Room for good work. No data.

KA, KI10 - Support. Massbus and communication controller designs.

KL10 - Highly motivated, well run with best scheduling techniques, great set of products ranging from 11/45+to greater than KI-10 assuming pricing is done this way.

14 - Well motivated, solo effort. I don't like product.

16 - Highly motivated. We haven't learned to use or sell it.

Industrial - Many products. No plan. Competition.

Business - Essentially a non-group. Identified reliability problem.

TPL/Typeset - Apparently good support of both groups.

LDP/Graphics - Graphics effort probably too small. Lots of products. When will it pay?

Communications - Lots of products. Where are they going?

Modules - Good. Highly motivated. Identified a need 1 year before company!

Disks - RS - Very good technology and motivation.

Disks - RK - Good first (learning) product.

Disks - RP - We need a group, product, and plan.

Tape - Cassette - Support.

Tape - DECtape - Support.

Tape - IBM - The people mix is right to produce a unit whether we want it or not - we need techniques for eventual product as companion to RP-series.

Fig. 2

Comments on Organizational Groups -2-

LA30L - Well motivated. Hopefully will build a few good products.

Printers - Support now. Basis for a printer in LA30 effort.

Keyboard - Good start, too early to tell.

Paper tape - support

VTXY - Best motivated group. Exciting product.

RT - terminals - Motivated. Products expensive.

Memories - Good mfg. costs even though a weak 8K design. Good 16K design Close intra-cooperation. Need more aggressive MOS effort.

Power Supply - Acceptable costs. Response time and innovation problems. Hard to integrate with systems.

Service

(

Packaging - Still no plan - may be impossible. Response to individual projects. Trying for a standard. Must have better cooling, cabling, connectors, lower costs, etc.

Metals - Lots of effort. How do we measure it?

Testing - where are we headed?

Components - Just established, already some direction.

Mfg. Eng. - in plants, diverse. No automation, analysis, models, of physical lines. Set-of-parts operations.

Research - Interesting projects, need wider internal circulation. I want to see some product come out. Most use as a service to solve problems, help with standards, study.

1)

TO: O²D Fm: GBell J'd Untitalhakort Jhis at our groups GED Shein's Gheview of Interviews with Operations Committee and Engineering VP's Nov. 11, 1971.

General Company Issues

- 1) The company has not yet resolved whether it will be dominated by <u>preducts (engineering)</u> or by <u>markets</u>. The result of this tension is confusion of how to develop a product strategy at all levels of the organization and how to manage the interface between marketing and engineering. There is mutual mistrust both ways ("you guys dent deliver what you promise" or "your products dent work" vs. "you cont know what you want" and "you change your mind all the time."
- 2) The company has not yet resolved the balance between developing essentially a mail-cover business of low cost high volume standard products or developing less standard sophisticated systems tailored to different users. A number of people questioned why DEC is not able to deliver a low cost high volume product? Is engineering too concerned with state of the art and elegance to produce simpler more practical products, or is the pressure coming from sales and marketing for the more sophisticated systems?

Organization Structure Issues

- The role of the Group VP is still unclear-corporate officer setting basic goals and directions or line manager getting involved in product or functional concerns on a cay to day basis? What is the right balance? Is basic strategy getting enough attention?
 Role of committees, especially the Product Strategy Committees, is not clear? Are they
 "Baards of Directors" or "clearing houses" or what? How should they intefface with central engineering and the operations committee? What is the basic role of the Operations Committee?
- 3) In a geographically decentralized complex matrix organization such as DEC has become, where is the basic accountability for various kinds of decisions and is it clear to people? Can the basic philosophy of management by productive conflict work in a large erganization?
- 4) What is the role of Freduct Line Managers, Product Managers, and Central Engineering, and is the role clear to everyone?

Organization Process Issues

1) What is the appropriate style of management for top corporate executives in a complex matrix organization which is geographically decentralized to the degree that people do not know each other face-to-face? What is the role of consistent policies and organizational systems in such a matrix? How involved should a top manager be with operational decisions?

-2-

2) De committees work effectively as groups (that includes everything from the Operations Committee on down)? Are the committee chairmen and members trained in how to work effectively in group settings? Are staff meetings being run effectively? Is there a need for training in "meetings management?" Are chairmen picked carefully and briefed?
3) Is there a clear process for making marketing and product development decisions, and do people understand that process and use it? Do people follow up on the kind of structure they create and make sure that it works?

Central Engineering Issues

12 Es Some general observations made by one or more people:

- --Problem stems basically from not having good products ready at a time when the competition has been ab 2 to develop products, hence operating too much in a panic mode.
- --Engineers are scared because of past experiences of having been punished, hence are building walls, creating long schedules, high budgets, etc. all as a self-protective device.
- ---Engineers are too oriented toward the state of the art product, too theoretical, not practical enough.
- ---Engineering dees not have enough basic talent to do its jeb.
- --Engineering has been too disorganized in the past and is now possibly getting over-organized. Should ge back to temporary project group idea instead of permanent product gas.
- --Engineering managers do not adequately Monitor, control, get involved with their groups to insure effective follow through.

--Some engineering groups have low motivation, have become 9-5 types.

--Engineers would prefer to be closer to marketing and find the other system preferable, but some engineers prefer centralization and isolation. ("Honeywell" nymeronic)

---Engineering is a huge investment and therefore must work.

--By contralizing engineering it has become more visible to top management and, therefore, that become more of a target around various issues.

- ---it is not clear whether the philosophy of "wheever designs 2 product is responsible for it forever" still applies, and, if so, how it is implemented.
- --There are different degrees of "business orientation" within engineering--hardware group is most business oriented, software group is least so; all engineers must become educated tobs more business oriented.
- ---Central engineering does make sense in terms of similarity of products, economies of scale, and need to integrate hardware, soft-ware, and peripherals.
- --Engineering has become too powerful--who can keep it from doing something stupid? who can monitor its operation? who can keep it from becoming a fortress?
- --company wants engineering to de complete documentation and at the same time complains of that things take too long and cost too much (too much overhead)

Summary of Engineering Issues

- 1) Should there be a coordinated plan between Clayton, Puffer, and Portner? Should they be a team? Is it necessary? Do others see a need for it? How is it to be obtained?
- 2) How should G.B. be involved in the planning and implementing process? How much team building should be done with him or without him? What is the best use of his time and effort?
- 3) What should be the "philosophy" of engineering in regard to

-Engineering's scope of responsibility

-Quality of product

2.5 over the twenty

-product vs. system erientation

-Appropriate interface with marketing

-Individual vs. team work and decision making

--Career development for engineers ...

-Permananet grouns vs. retating task forces

G.B. Observations and Issues

--Not a good manager, but should not be one; should be a real leader --Hore thing oriented than people oriented, a real intellectual, technically brilliant

-4-

--Sends mixed siggals---sometimes andlifies Ken's concerns and attacks the erg., senetimes ends up defending the org. If he agrees with Ken that he is werried that worries Ken all the more; of he defends the org. cannot be a good technical resource or consultant to Ken.

--Caught in the middle between Kensand the Brganization, not clear about own role.

--Perceived as frustrated, tied down in administration

--Hot agare of his incensistencies and mixed signals

--Emotionally tesup and down; not consistent; too flighty

--- Tee eften deals with human problems simplistically

--Net tenacious on seme issues

--Has tee many het buttons, gets tee involved in crisis management

--Has not yet built a team under him

--Tee suspicious of outside resources, esp. personnel

COMPONENTS BUSINESS (continued)

- B. Marketing Plan
 - a) Terms & Conditions
 - b) Target Customers -- individually and by market
 - c) Field Sales Plan & Agreements with Ted's people
 - d) Interaction with rest of company
- C. Budgets
 - a) Thompson and Michels will present the first pass at the March Budget Review.
 - b) Andy will give Pete a back of the envelope order by March 1. He will be ready to make formal requests by the May 1, 1974 go-around.
- D. The group will tentatively have the following name and logo:

d igital e quipment

c omponents

- E. Logistics and Business Management
 - a) Warehouse plan
 - b) Shipping plan
 - c) Receiving plan
 - d) QC and Depot repair plan
 - e) Administration Order Processing, Billing, Short-term Forecasting and Inventory Management
- F. Engineering
 - a) Test equipment, QC monitor and planning
 - b) Applications -- literature and coordination with marketing group
 - c) Interface with Central Engineering

4. PRODUCT LINE PROGNOSIS

Ken feels we should emphasize building stronger Product Line organizations. He would be happy to call the major Product Lines 'Divisions' if it would get us there sooner. Everyone agrees that in a billion dollar business no Product Line Manager will be able to do all of the following without a strong organization:

- a) Look through all of our hardware/software product development.
- b) Know the market
- c) Do all the things in Clayton's Red Book
- d) Have his ear to the ground within the Company

Minutes of Bermuda Woods Meeting February 10, 11, 12, 1974

PRODUCT LINE PROGNOSIS (continued)

It's clear that an effective Product Line Organization will depend upon delegation and a strong team. The Group developed the Organization goal for a major Product Line outlined in Appendix 4. Ken feels we should start with the Components and OEM groups as examples and the Group VPs should target the four remaining major Product Lines to be organized this way by the end of FY 1975. After working through the following chart, the group felt that over half the present slots in the major Product Lines were understaffed:

PL MGR.	MKT. MGR.	FIN. MGR.	BNS. MGR.	ENGR.MGR.
Leng	Kiesewetter	Strauss	Bradley	Wilhelm Fagerquist
Long	Meany Willis Cothran	Cerra	None	None
Vachon	Marshall	None	A. Jones	Savell
Kramer	Spector Frost	Mullarkey	Schmidt	3 guys
Marcus	Alusic Cady	Bresnahan	Hunt	Bastiani

Ken again emphasized that the Group VPs should work at strengthening the major Product Line Organization over the next year. Win suggested that some day we might measure them by NOR and expense budgets, rather than profit. However, Ken was not comfortable with this.

5. OPERATIONS COMMITTEE MEMBERS

Ken suggested the Operations Committee should be expanded. There was major concern whether a large group could work effectively. The discussion evolved into a ranking of key managers. Ken will work the issue at the February Board of Directors meeting along with the possibility of appointing additional VPs.

6. MISCELLANEOUS ISSUES

Ken wants John Leng to explain his Engineering Budget to the March Budget Review and the Board of Directors.

5
Minutes of Bermuda Woods Meeting February 10, 11, 12, 1974

MISCELLANEOUS ISSUES (continued)

Win will work with the Marketing Committee to choose a position for the Computation Group. The alternatives are:

- a) Keep separate and independent
- b) Put into the PDP-10 Group
- c) Combine with Business and let Stan decide what to do with the Education segment.

CENTRAL ENGINEERING ORGANIZATION

ORGANIZATION

 DEC Central Engineering is a matrix Organization of Systems and Component Managers as follows:

- 2. Systems Groupings:
 - a) Small
 - b) Medium & Large

3. System Manager's Internal Line Responsibilities:

- a) CPUs and internal option design
- b) Systems definition and engineering
- c) Organization consisting of System Engineers and Product Managers

4. Component Manager's Line Responsibilities:

- a) Initiates Product Plan
- b) Introduces products into Manufacturing
- c) Sets and achieves Cost and Reliability Goals
- d) Organization consisting of Product Managers, Projects Engineers and Engineering Managers

5. Formal Plans include:

- a) Component and System Manager prepare 3 year Product "Possibilities" List
- b) Product Lines prepare Product Wish List
- c) System Manager publishes System Goals
- d) Component Manager proposes Product Plan in the context of the Funding Algorithm
- e) Component and System Managers operate in the context Final Plans approved by the New Products Committee

Appendix 2 (page 2)

ORGANIZATION (continued)

- New Products Committee approves Plans subject to Operations Committee veto.
 - a) Consists of: Engineering Vice President and Staff Component Manager Systems Manager Software Manager
 - Manufacturing Representation Product Line Representation
 - b) Utilizes specialized Steering Committees and Task Forces
- 7. Woods meetings used for communication and feedback, but not to approve Plans.
 - a) Separate meetings for small, medium and large limited to people with direct interest.
 - b) Meetings also held for major components such as disks, tapes, etc.
- 8. Specific "open door" Appeal System to Operations Committee to openly challenge formally approved Plans and propose alternatives.

FUNDING

- 1. Derived from tax on products to be sold, with facility for different tax rate for different products.
- 2. Charged to Product Lines as part of Product Transfer Cost.
- 3. Portion off top for New Products and Manufacturing Engineering (probably 1/2% and 1/2% respectively).
- 4. Remainder, at first approximation, allocated to development of products which incurred tax.
- 5. Managers propose changes and work out differences which Products Committee approves.
- The Finance Department will cut the business by Products and Systems as well as Markets to measure the effectiveness of the Central Engineering Group.
- 7. Product Lines can engineer their own products if they are not satisfied with Central Engineering but, in addition to Central Tax.

DIGITAL EQUIPMENT COMPONENTS PROPOSED ORGANIZATION

GOAL FOR MAJOR PRODUCT LINE ORGANIZATION

DIVISION GOALS: , PROFIT , MARKET SHARE

Office of Development Handbook (Internal)

Personnel Requisitions

- 1. Complete Request For Personnel Form as far as the approvals section.
- 2. Send to Cost Center Manager for signature.
- 3. Cost Center Manager retains pink copy.
- 4. Send to Financial Analyst:

Software	Development	-	Pat Spratt	X3317	PK3-1
Hardware	Development	-	Irene Leary	X2067	1-3
Computer	Systems		Larry Smith	X4492	5-2
-			(temporarily	- Phil	Laut
				X4308	3 12-1)

5. Financial Analyst indicates whether the hire is within the budget and forwards to the appropriate Vice President. Finance retains yellow copy.

Software	Development	-	Larry Portner
Hardware	Development	-	Bob Puffer
Computer	Systems	-	Dick Clayton

- Vice President (dis) approves. All personnel requisitions not within budget must be approved by Gordon Bell before going to Personnel.
- 7. Return to Finance.
- 8. Finance sends white copy to Mark Abbett in Personnel.
- 9. Finance sends green copy to Cost Center Manager as notification that requisition has been approved.

SUBJ: ORGANIZING A BALANCED, EFFECTIVE PROMOTION AND SUPPORT STRATEGY

At the Product Line Managers Meeting (12/17), we discussed the problem of getting promotion mileage out of key cross-products (peripherals, software, concepts, etc.).

We have, I believe product marketing support problems too.

It seems to me that we should have an overview of marketing strategy that looks like this:

I believe we should look at ways to make sure we get responsibilities, and forecasting mechanisms identified and established so we can get the balanced program for the corporation.

digital interoffice memorandum

TO: Operations Committee cc: John Fisher

- DATE: January 3, 1974 FROM: Andy Knowles DEPT: Small Computer Products
- EXT: 3043 LOC: 5-2

SUBJ: WOODS MEETING OF 1/2/74

I thought you might be interested in the reaction of a new senior manager - attached.

/sc attachment

digital interoffice memorandum

TO: Andy Knowles

DATE:	January 3, 1974
FROM:	Dave Peters
DEPT:	Small Computer Engineering
EXT:	5272 LOC: 5-2

SUBJ: WOODS MEETING OF 1/2/74

I came away from yesterday's meeting a little frustrated. It seems to me that we have an awfully confused organization and that we are attempting to resolve the confusion by creating more organization.

I'm simple-minded, so my view of an organization is simple-minded. The corporation has a set of responsibilities in addition to those of responsible management. For instance,

Corporation

1. Businesses we want to be in, for instance

Computer systems Peripherals End-user software

2. Businesses we don't want to be in, for instance

Turnkey systems Point-of-sale

3. Businesses we want to learn more about before deciding if we want to be in them, for instance

Calculators

4. What our general corporate goals are, for instance

Long term growth rate Profit levels

5. How we want to spend our R&D money, for instance

By major general category By very approximate dollar amount

In response to this, responsible management would:

Responsible Management

- 1. Make proposals resulting from original ideas
- 2. Make business plans
- 3. Manage programs with specific goals

Costs Schedules Profit growth rates Compatibility Organization

And in return, the corporation would:

Corporation

- 1. Alter plans
- 2. Prioritize programs
- 3. Mediate major program conflicts

In my estimation, the term "responsible management" means the PLM's and the engineering managers. Their respective responsibilities are, among other things:

PLM - find out what the market needs are - react to proposed programs

> usefulness timeliness product cost development cost

- generate ideas
- write business plans

Eng. Mgmt. - generate and test ideas

- respond to outside ideas
 - give cost and schedule responses
 - manage engineering programs

Andy Knowles Page 3

January 3, 1974

As far as a development organization is concerned, I think of things like

Small Systems Medium Systems Large Systems Terminals hardware software peripherals

who would be supported by common-to-all organizations like

Power supplies Memories Packages

The Systems organizations would be responsible for development plans within the very general constraints of the corporation. They would also be responsible for the execution of those plans. The supporting organizations may get conflicting inputs and therefore, they must put their own development plans together and be measured by them.

and and a first that a second of the second second is a state of the second second second is second as a second

G. Bell 2/22/74 To: a charge A change is being considered for the central engineering organization. The change is an outgrowth of a requirement for better product plans and products rather than solely for DEC's increasing size. increase in the functions of The change does not represent the central engineering organization. The objective is to increase the quality, rather than the quantity of products. Our goal is to develop basic products which can be built and soldprofitably into present and future product lines including product type (10, Logic, Grpahics, Communications and CSS); applications type (Business, LDP, Industrial, Biomedical, Computation); and customer-type -(OEM); and service type (Software Support and Field Service) We are attempting to provide better products by focusing on the following issues: Establishing a strong product development business (sellers) 0. for the evolving strong product line businesses (buyers). Before integrated planning and development of hardware-software-1. systems to fit the PL requirements. We hope to plan total systems more carefully along one or more of the dimensions: size (overall configuration size together with memory management options); operating system user-type (Human User, Real Time, and Batch); and operating system multiprogramming (single user, foreground-background-l+l user and multiple user).

-2computer systems will be viewed as a layered hierarchy consisting of CPU and memory, hardware options, operating systems, programming languages and applications programs. This is in $cont fast \ to thinking of computers as a collection of hardware$ options and pieces of software. 2. -Better blanning of options and the corresponding support software to provide total systems which can be introduced on a complete basis, rather than gradually with software following hardware. include Better Manuals, documentation and promotional material for the basic products. Product Managers will be totally aligned with the products and their - expinence role tonterviel Product Managers of today are beginning to function effectively, and their charter will be extended to include: initial product planning; financial analysis including the coordination of engineering and manufacturing start-up; and sales of products to the various Customer-Applications-Service Product Lines. We believe there must be product (and product manager) measurement at roughly the same level of detail and precision as for Product Line Managers. The general hassle-level should be significantly reduced, and 5. confined to only relevant hassling. Thus providers (sellers) and users (buyers) of particular products would participate in products and policies--not all buyers of any product. Under the current budget method, this will consist of allocating funds according to system size, and then having the product groups and their customers allocate within the groups.

. .

----- A-longer_term_goal_must_be_a_scheme_for_comparing_all_product_ ------candidates equitably including those_developed_especially_for__ Product Lines on the basis of their profitability to the corporation. --Better orientation-of-dominately-technology-oriented-products---- (as opposed to dominately market-oriented) ____ These include_core___ memories, semiconductor memories, and semiconductors.... --7. - Increased standardization of hardware. The hardware includes purhtased-components,-cabinets,-boxes,-boards,-power-equipment-and basic memory circuits.--In-general, subassembly numbers should be reduced-to-aid-manufacturing-and-reduce-field-service-inventory.----Increased-standardization of software within the PDP-11 and extending to PDP-8 and PDP-10. For the PDP-11 this will include a common operating system interface and file system, such that -user-level systems programs (ie., translators, run time, and editors)-and-user-programs, operate on all members of the -family--provided the system supports the capability All higher -level-languages-would-also-be-subset-compatible-such-that_a_____ common language manual-could describe the language for all systems. Operating system support of hu/ticomputer structures. -- This would enable the construction of networks and tightly-coupled computer systems. Better (fairer) review of engineers 11. Personal development of engineers to follow engineering,

or sales tracks for products, product process, or engineering tools.

<u>d</u> ið	ILAI INTEROFFIC		
TO:	Phil Laut	DATE:	October 4, 1973
	Bill Thompson	FROM:	Grant Saviers / W 4
CC:	Products Committee Manufacturing-Engineering	DEPT:	Disk Engineering
	Committee	EXT :	2357 5 02
SUBJ:	YOUR PROPOSED APPROVAL PROCED	URE FOR P	RODUCTS AND PRICES.

Approval Process

I don't like the Products Approval flow charts. They are deficient in the following respects:

1. We should correlate major corporate reviews of products with proposed major commitments. Examples:

PHASE	REVIEW/PURPOSE	RESULTING COMMITMENT
0	Concept	Organizational Restructuring
1	Proposal/Business Plan	Development \$
2	Design	Manufacturing Startup \$
3	Release	Inventory \$, Manufacturing Manpower
4	Announcement	Customer Commitments
5	Ship	Field Service startup \$
6	Withdraw	Write-offs, Customer Decommitments

I don't think that the Products or Manufacturing-Engineering Committees have the energy, time, or manpower to watch projects as often as the flow charts indicate. The major reviews should occur between the event blocks (Concept, Proposal, Design and Price, Release, Test (new), Announce, Ship, Withdraw). See my attached flow chart.

- 2. The Design Review looks like a club rather than an aid to the Project Manager. These <u>must</u> happen, but getting a good Design Review takes a strong push to get effective participation.
- 3. Product test is not even mentioned!! This is one reason why we deliver unreliable products. I believe we should have an independent product test group. The engineers need the incremental help at the Test stage of a project since they

are 120% busy with solving problems, helping Manufacturing, etc. We could set testing up in parallel with release and not incur any major built-in delays to first ship.

4. The field release activity is not mentioned. Hardware should have test sites, like software. A positive approach to field training, getting feedback, solving logistical problems must be taken. The "system" doesn't work (because of growth) for existing products, let alone new ones.

I suspect that our product introductions <u>need</u> to be as fancy as IBM's (Volume is about the same).

- 5. I note that in Figure 2, the only permitted answer from the "Operations Committee Appeal" box is NO.
- 6. The Manufacturing-Engineering Committee should be the reviewer at "Assembly and Test" (Step 5F). "Production Release" (Step 5J) no longer has any meaning with all startup in remote plants.

SUBJ: Goals and Structure of the Financial and Product Planning Organization in Engineering

GOAL - My goal is to provide data and tools that cause us to spend development dollars as wisely as possible.

ROLE OF STAFF PEOPLE IN MEETING THE GOAL

(Some of this previously outlined to Gordon)

The purpose of a staff is to cause follow-up, communication and useful data to occur, not to run the place. This results in some useful rules for staff members.

Endeavor not to criticize unless you can offer at least a helpful suggestion.

Don't do manager's job. Learn to say no.
Expansion of the goal into various objectives.

FINANCIAL & PRODUCT REPORTING

GROUP

To achieve the goal, some level of reporting of financial information, cut by product and compared against plan is necessary.

The reporting system will use, as much as possible, the data from the central accounting system, although the level of precision and auditing in the central system will not be required, because it is not intended to use accounting data by product to fulfill the company's legally imposed requirements to report to IRS, SEC and others.

The data required for this reporting system called Product Accounting breaks down into two basic categories - shipment information and expense information.

<u>Shipment information</u> - The capability exists to extract shipment data by product from today's records, but this process is cumbersome and time consuming, due to the largely manual method of exploding system shipments into pieces. (Arnie Goldfein to provide analysis and programming to make this simpler.)

Expense information - Today there exists a company-wide discrete project reporting system and within Software Engineering, a budget package that facilitates the formulation of cost center budgets.

What Next

During the next nine months (i.e., by January 1, 1975) I would like to:

 Implement the use of the Software Engineering budget package in Systems & Hardware Engineering cost centers. 2) Finish product accounting to the point where we are able to publish product statements vs. plan each quarter, one month after the end of the quarter.

<u>People Needed</u> - Although most of the data used in Product Accounting is from the central accounting system, as mentioned earlier, the implementation of the software needed to produce Product Accounting data is not all that is needed for timely Product Accounting reports. I believe we need people who will:

- 1) Enter and verify budget data
- 2) Check accuracy of budget output and actual output
- 3) Prepare and distribute reports
- 4) Maintain software.

For this, I propose a financial reporting group of four (4) people.

0. Line responsibility for management of new products, definition, and development with engineering support of high volume products.

4/26/74

- Manage line development according to plans. (budget, schedule, specs, reliability, etc.)
- 2. Plan and implement orderly growth of development organization with respect to:
 - A. New technology and market opportunities.
 - B. Management growth and enhancement of people, and development of technical expertise.
- 3. Salary review of professionals within development organization.
- 4. Streamline planning and development process to effect low hassle level by open organization, and well defined processes with clear inputs and outputs.

PRODUCTS COMMITTEE

Membership: Consists of development (5 1/2), representative PL's (5), sales (1), and manufacturing (2 1/2)

> Bell, Laut, Portner, Puffer, Clayton, Leng, Hanson, Lemaire, Moore, Busiek, Knowles, Kramer, Jacobs, (Thompson, Assoc. Mem.)

Change to:

- 1. Establish and review allocation algorithms in line with corporate strategies. Review area plans in accordance with algorithms. Recommend R&D budget for Operations Committee approval.
- Establish and review technology/product guidance groups for appropriate system and technology areas. The area group will determine detailed product strategies, tactics, and day-to-day crises. Areas will contain representatives from development, manufacturing consumer product lines, and the field (sales, field service and software support).
- 3. Formulate aggregate corporate product strategy in terms of product area strategies.
- 4. Review major Products Business (Development)Plans prior to establishment of project (including those within the Product Lines). Recommend to Operations Committee.

5. Examine pricing and introduction plan as per the Business Plan.

6. Monitor area product (project) budgets.

4/26/74

TECHNOLOGY/PRODUCT GUIDANCE COMMITTEES FOR HARDWARE, SOFTWARE AND SYSTEMS

Chaired: Development Manager of area; Secretary: Product Planner of area

Membership: Buyers (PL's), Mfg., Diagnostics, Sales, area Product Managers and Development Managers and co-area Managers

Purpose: Communication and review of strategy, tactics and day-to-day issues with technology/product area manager.

Charter:

- 1. Carry out detailed review and reformulation of 3 year plan for product area. Area planning responsibility of area manager.
- 2. Detailed review of Business Plan (Development Project Part) before presentation to PC (and PLMC).
- 3. Detailed review of Business Plan (Pricing and Introduction Part) before presentation to PLMC (and PC).
- 4. Monitor product (Product Manager) and project (Project Engineer) performance against budgets.
- 5. Constantly review products position.
- 6. Sponsor Woods Meetings

4/a/74 APR 0 9 1974 From the desk of -Gordon, Ref. Participation in Woods Altes AL SHARON Instead of going to the managers of the product under review for names, I suggest we get them to agree or augment this chart and then get the names of the specific individuals from each PL mgr. This way we can be sure of proper representation from PL. Same applies for designating representatives from Hardware and Software Engineering. Please comment. Adso any suggestion for LSI meeting participation Thoux as

DIGUE INTEROFFICE MEMORANDUM

TO: Product Line Managers Operations Committee CC: Bill Thompson DATE: April 22, 1974 FROM: Lou Burke DEPT: Corporate Planning EXT: 3968 LOC: PK 3-2

SUBJ: LONG RANGE FORECAST BY PRODUCT LINE (By System)

Since the beginning of calendar year 1974 we have been working with the product lines to collect long range forecasts by system by product line. The first iteration is 80% complete. Attachment I is a status report by product line.

What are these forecasts to be used for? (Current and Future)

-Currently

1. Communication between the Product Line and Development

It is the beginning of a formal means of communication and transmittal of commitment between the product lines and development.

-It facilitates the product or development managers obtaining his new product forecasts because a base line forecast will already exist. It is easier (Example: 11/55 Forecast, Product Manager John Misialek) to delta (plus or minus) a forecast due to performance changes, cost/price changes or time phasing-in if a base already exists.

2. It is a view of the outside world from a marketing viewpoint.

-Future

- 1. It will be the basis for eventual Long Range Product Line Business Plans of which the forecasts with their associated mix will become business volumes.
- 2. The aggregate of the product line forecasts (business volumes) will be the basis for a DEC Long Range Plan.
- 3. Field Service Planning--How many of a certain type product will be required to be installed? When?
- 4. Manufacturing-- The volume and mix of products that will be needed in the future. Facilitates manufacturing planning.

The overriding consideration now becomes that of quality. What's needed is a review of each product line forecast by the respective product line management to ensure consistency, proper time phasing-in of all new products, wish lists-- in other words, requests including volume and a general description for any new product or enhancement that doesn't appear on the new product lists, assumptions and an expression of some degree of confidence.

Attachment II is a random sample of the end product of the long range system forecast. The sample was LDP. We (the product lines and I) have been committed to publish the first forecast by May 17, 1974. Included will be:

- 1. System forecasts by various configurations
- 2. Dollar volumes from the above

/a

3. An explosion from the systems forecasts of the various options within the systems.

This is not a one time project but an on-going part of forward year planning. This forecast, in total, will be updated a minimum of every six months and individual product forecasts will be updated whenever a new product business plan is issued and its forecasts supersede a particular forecast on an item or system.

ATTACHMENT II

Provide the Marganetic

Exhibit I represents the long range forecast by system configuration. Although LDP sells many more configurations, the bulk of their business can be captured with 10 to 15 configurations. -- Ten are used thus far. The configurations labeled NPL⁽¹⁾ designate the phase-in point of the new "11" processors.

Exhibit II shows how a configuration changes with time. Note the phase-in of new products.

Exhibit III is a product explosion, which is the result of multiplying the system forecast number(s) times the configuration(s). A very simple configuration is chosen here, a large laboratory system, an 11/45. In 1975 the 11/55 is phased-in and in 1977 the 11/85 is the new product which replaces the 11/55.

propose that we (he) postulate the magic charts, (hopefully just update the view), and proceed to get the inputs on this 3) basis. We would then work with 1 product line on this basis, to see if it can be made to work. Ken wants the charts, I want the charts, and I don't know of anyone who doesn't D want them...I want someone whose soins to help set them for us.

Jack has talked with Win, Ted, Ken, and I. I believe he should also talk with Bill Thompson, Dick and Phil (some more).

Corporate Policy Memorandum

NUMBER	
REVISION	_ JAN 21 1976
Pagel of4	
DATE: November FROM: John Fis DEPT: Administ EXT: 4515	20, 1975 her ration
LOC/MAIL STOP- MI	, 12/1 A-50

SUBJ: MARKETING COMMITTEE/OOD INTERFACE

DEC's product strategy is determined through an interaction of the Marketing Committee and the Office of Development. The purpose of this policy is to define the formal procedures for product decisions between these groups.

SUMMARY

Interaction regarding products occurs at two levels:

- the strategic level
- the individual product level

Strategic review will consist of:

Continuation of the process started last spring with the Red Book strategy.

Namely on a semi-annual basis:

Propose updates to strategy - OOD Review strategy - key Product Lines Approve and/or require - Marketing Committee changes to strategy

Individual product review consists of:

Institution of a formal review process in which the steps are clearly defined and which allows considerable flexibility regarding the time investment by the various management committees in the Company. The reason for this is that not every product is a hot issue all the time and this feature allows focus on the hot issues.

INTERACTION AT THE INDIVIDUAL PRODUCT LEVEL

This is the process whereby business plans for the major products are prepared by the Product Manager and reviewed. The intention of this process is to communicate the most amount of information with the least amount of hassle. A six to eight page business plan summary will be the information that is circulated. Supporting information in excess of the summary will be published in an

Corporate Policy Memorandum

REVISION	
Page2 of4	
DATE: November 20, 1975 FROM: John Fisher DEPT: Administration EXT: 4515 LOC/MAILSTOP: ML 12/1 A-50	

appendix that will not be distributed but will be available upon request for the people who want it. Attached are a summary flow chart that describes where the information goes and a more detailed chart that shows content and purpose of the various documents.

PROCEDURES

There are a couple of things that we can do to make the process effective:

- Documents will be distributed to the various groups and committees. An oral presentation will not be scheduled unless requested.
- One OOD Staff Meeting per month will be set aside for review of business plans.
- 3. Prior to OOD approval (where shown on the summary flow chart), the business plan will be distributed to OOD members and to cognizant managers in Manufacturing, Field Service and Software Support, as applicable. A minimum of two weeks will exist between distribution of the business plan and the scheduled review at OOD. The purpose of the two week period is to allow recipients of the business plan to review it in their groups and to decide whether to call for a presentation by the initiator at the next OOD monthly review of business plans.
- 4. The process can start in two ways. In cases where the proposed product is part of the approved strategy, all that is needed is distribution of the applicable section of the strategy document as notification that work is starting. In cases where a product that is not included in the current strategy is proposed what is required to start the process is a brief (two page) document defining the business and technical justification for the proposed design.

For certain Key products our policy encourages competing design efforts. Funding in such cases will be limited to prototype development and a choice between the alternatives will occur before funds are committed for production start-up.

Corporate Policy Memorandums are prepared at the request and approval of the Operations Committee. This Policy was prepared by

who can answer questions concerning the contents. Managers receiving the Policies should communicate them within their group.

Distribution of Product Planning Information

Summary Flow Chart

CORPORATE POLICY MEMORANDUM NUMBER

PAGE

The purpose of this chart is to list at the summary level, the four phases of product development and to show the written material that will ba published at the end of each phase.

INTEROFFICE MEMORANDUM

SUEJ: <u>Strategic/Management/Operation Controls Reporting</u> and <u>Control Systems and Their Processes--OOD Level Inventory Manual</u>

surger.

TC:	Stan Pearson	DATE: 28 JAN 77	
CC:	OOD	FROM: Gordon Bell	
	Bruce Delagi	DEPT: OOD	
	Bill Thompson	EXT: 2236 LOC: ML12/	A51

We have been discussing the need to categorize and set priorities on the wide range of reports, control systems and processes that various people expect of OCD. We recognize that we have not been clear or consistent on expectations, goals, and priorities on such things as: yellow book, project process plans, schedule reviews, magic charts (engineering), project reporting systems, monthly status reports, etc.

Could you collect and clearly summarize the various existing desirable reports, control systems, and processes; put them in the form of a basic looseleaf manual with the appropriate section headings? Phil did an "Engineering Information Locater" that might be of help in starting. Let's identify the item (e.g. yellow book) and its goals. The lovel should serve OCD Vice Presidents in external communications, inter-group functions. I would hope it could be used down one or two levels so I could look at projects and performance.

I would like to know what to expect from the Vice Presidents as to formal communications, and goals--Win has a good scheme. His managers issue quarterly reports against their goals. Please get a recent copy of his to see whether it can be used within OOD.

The process characterization is a part of this compendium. Could you also identify them as per my January 18, 1977 memo (attached); and get any of the Corporate ones from Bill. The EDP tools and reports are clearly another section.

Dick, Bob, and Larry believe it is possible to collect, enumerate, and then clarify the goals of the various reports, prioritize them, and breath some much needed life into a selected service of our many administrative and control tools. They would like to complete the summerization by February 8, and hope for formal COD prioritization and goal clarification by February 18.

Subject: Corporation and CCD Calendar of Synchronous Processes

To:	CCD	Date: 18 JAN	77	
	Bruce Delagi	From: Gordon	Eell	
	Eill Thompson	Dept: COD		
		Loc.: ML12-1	Ext.:	2236
CC:	Ken Clsen	• .		
		F/U 1/31		

Picking up on the work to rule notion let's get a first pass at corporate and CUD yearly process clocks. This could help form a base for the PR and Eermuda hoods. Also, it would formalize just what processes we have (and haven't)! (The purpose would be to get time for the constant stream of fire drills and crises.)

Eill, could you give us the current corporate calendar and the corporate processes that affect OGD? These would include interfaces and dates for P/L; Manufacturing; Personnel (and organization); Space; Product (COD); Computational Resources; Capital Equipment processes.

Ideally these are all laid out in a one page table (about 10 yards long) by organization versus time so that we can see how the output of one process is used for another (e.g., budget setting --> begin Spring Red Book Update; P/L LRP --> Fall Red Book Update). Also, note if we all use the same format, then aryone can understand what's going on. Since the Red Book is probably the most clear and routine, let's put it on one page (or 1/2 page).

Within COD I'd like to enumerate the processes, their keepers, inputs, outputs; review/approvals; and reporting and then fix their calendars.

Stan/Larry - Red Book and P/L interaction

<u>Dick/Arnie/Bill Thompson</u> - Eill's Engineering Magic Charts or mine (since his probably won't even make it)

<u>Arnie/Stan</u> - Product reviews

<u>Arnie</u> - Yellow Book (reporting); any other reviews? Quarterly financial reviews; Computational resources.

John Meyer/G, Fell - Salary planning/performance appraisal/goal setting

Jim - R and Advanced Development plan and review

<u>Pob/John Meyer</u> - Organizational plans and space

<u>G.Eell</u> - Jungle meetings

Bruce and Eill, can you help us here?

SUBJ. PRODUCT BUSINESS REVIEW(S)

This memo is in response to G. Bell's request to Stan Pearson and others to come up with a common format for Product Business Reviews to make the reviews more "visible". This memo has been prepared with help from Stan, Bruce, Frank, and Arny.

0. Proposal

I recommend that 0^2D set up a products committee as described below (paragraph 2.b). The purpose of the committee is outlined on Page 2.

1. Common Format

The attached charts (Appendix A) are an attempt to standardize the format of the Business Plan Reviews. I would like to ask if the objectives and methodology are reasonably consistent with what O²D has in mind.

Content

The idea is to review the previous plan against results to date and current expectations.

Time & Format

Reviews should be about a half-hour in length and provide open communication. There should be a fixed format for common questions and a free format to accommodate product specific messages that the Product Manager feels appropriate.

After hearing from you I will incorporate any comments you may have, communicate the results to the Product Managers, and set up a schedule.

2. Visibility

- a) The best way to improve the visibility of the review process is to hold the Product Managers formally responsible for their plans and judge them on that basis. This implies that (1) the corporation wants to manage itself in this dimension (as well as all other dimensions it manages itself); and (2) that a product management <u>organization</u> will exist with a manager or officer responsible for the overall success in that dimension.
- b) Assuming you don't want to make such a drastic change, the nextbest way to make the process "visible" is to tie it into the Business Plan approval process. From the corporate Green Sheet #75-8 (Appendix B) Business Plans are the vehicle by which O^CD formally approves a project. My impression is that OOD has not been active on this matter for some time.

Product Business Review(s)

-2-

2. Visibility (continued)

If 0^2D was active in Business Plan approval, and if there was a recognizable feedback path between the Business Plan <u>Review</u> process (old plans) and the Business Plan <u>Approval</u> process (new plans), the review process would have all the visibility you could wish. The most easily recognized feedback path is common people involved with the review and approval processes. Also necessary is an approval process with "teeth", that is, all programs are reviewed and require approval to continue.

A Products Committee

If O^CD cannot dedicate the time to be actively and sincerely involved in a Business Plan review and approval process, I suggest you delegate it and set up a Products Committee responsible to maintain the process. My recommendation is that a committee of Arny, Stan, Bruce, Frank, Larry Wade, Bill McBride, Glenn Reyer, Dan Riordan, Al Huefner, Abbott Weiss, and one person from the Sales/Service organization be set up to conduct Business Plan Post Partum Reviews and new business plan previews. Since I am pushing this idea, I will initially chair the committee and make the reviews happen, I will ask Myron Kandra to be the secretary, and we will pass on to O^CD our conclusions and recommendations (one page maximum or by oral report) to OOD for your action and information. The results of these reviews will also be published in the Yellow Book.

The purpose of the committee will be to provide Product Managers with a defined forum for reviewing business plans, to provide planning people with a forum for reading the mood of the corporation, and to provide O^CD with a mechanism for testing their program plans.

c) <u>Should you wish</u> to do neither of the above, your personal attendance and interest in the reviews is essential.

SUBJ: BUSINESS PLAN REVIEWS

Distribution

I will shortly be contacting you to schedule a date for you to review your business plans with OOD. Business plans are an important part of OOD's control and communication processes. They are critical for communication with engineering management, manufacturing, finance, and the product lines.

Paul Bauer has produced a list of products, their phases, and FCS dates. I'm going to call upon you in reverse order of FCS. Paul's memo with the list of projects, phases, and appropriate review periods, is attached. If you disagree with any of the contents or want to enhance the list, feel free to call me.

I am going to schedule the 11 CPU and the Memory Options next month.

Gordon has written a program, which is being enhanced by Mike Mitchell in our EDP group, to allow you to generate the phase zero 2-page summary (with financials, on-line) at a terminal. Please contact your F.A. if you want help or assistance in using this program. The phase \emptyset summary should be available for every product which is at phase \emptyset or later.

Copies of the draft DEC Standard 130 are available from Paul or me ... if you need some guidance as to how to structure a business plan.

SUBJ, OOD BUSINESS PLAN - APPROVAL PROCESS

Per your request, I have polled parts of Central Engineering to compile a current status on business plan approval. Attached is a schedule of projects, and when they could/should be reviewed by OOD.

For purposes of consistency, the phase 0 plans should be the two pagesone page a completed Engineering Project Survey (see attached) plus one page Option Products. Phase 1 plans should follow. The outline attached contains an updated project survey and option brochure. Phase 2 plans will be the full plan per DEC Standard 130 (which we are currently preparing).

SUBJ: OP COM PRODUCT BUSINESS REVIEW (S)

This memo is in response to G. Bell's request for me to outline the purpose and schedule of product business reviews to the Operations Committee. (attached)

The attached program is based on what I would want if I were reviewing the product business outlook. Before going further I would like to ask if the objectives and methodology is reasonably consistent with 0^2D views.

Briefly:

The idea is to review previous versus current prediciton of business results based on potential impact to existing plans.

Reviews should be about a half hour in length and provide open communication. There should be a fixed format for common questions and a free format to accommodate product specific messages that the product managers feels appropriate.

The next steps are to incorporate any comments you may have, communicate with the Product Managers, and set up the schedule.

SHP:ssc

DRAFT PROPOSAL

Please comment to S. Pearson ML12-3/A62 X 2424

TITLE: Product Business Reviews.

OBJECTIVE: Implement a process that will give visability to Central Engineering Products that have potential impact on current or future business.

SCOPE: All Centrally developed Products.

METHODOLOGY:

- . Coordinated by O²D strategic planning.
- . Product Managers responsible fr individual review content.
- . Product area's will be scheduled one per month on a three month rolling schedule.
- Product selection will be based on perceived impact level.
- . Audience will be the Operations Committee and Product Line Managers Committee.
- . Review time will be targeted for a half hour.
- . Format will be part fixed and part free form. The fixed portion will be structured to answer predefined common questions. The free form will be the Product Managers opportunity to communicate any messages unique to the particular product area.
- . The reviews will be structured to address the following questions:

1. Product Message - What are the unique selling points about this product relative to our other products and those of our competitors?

2. Competition - Who are the key competitors? Who is the major competitor and what is the product comparison in terms of delta price, function, performance plus other influencing factors that may be key?

3. Milestone dates, Market requirement document, Product requirement doucment, Feasibility study, Functional Specification, Design Specification, prototype, Engineering release, Manufacturing release, First Customer Shipment, Volume Shipment?

4. Business Volume, total revenue and contribution to date and five-year outlook versus original prediction? Revenue by channel of distribution to date and fiveyear outlook?

5. Cost Factors - the key cost factors to date and five-year outlook versus original predictions?

6. Recommend variance to existing plans and associated impact/benefit.

7. Things to do differently next time?

(

ĺ

8. Other messages the Product Manager would like to communicate?

Stown Joigital STAN Interoffic	NUV 12.1976
G Subject: <u>Product Manager Review Visi</u>	Bility Cordon Bell NOV 1 7 1976
CC: Operations Committee OOD Paul Bauer Ed Fauvre	From: Gordon Bell Dept: OOD Loc.: ML12-1 Ext.: 2236 DEC 0 6.1976
Al Huefner George Plowman JAR Mike Tomasic	

We've been asked by the Operations Committee to make the review of products vis a vis the Product Managers at the monthly meetings more visible.

Could you publish a memo stating the purpose, schedule, and the handouts of the last meeting in the Yellow Book?

I'd also like to get this on the Operations Committee or Marketing Committee agenda for their information and comment.

GB:ljp

Interoffice Memo

Digital

Subject: Product Review

To: Paul Bauer Ed Fauvre Date: 23 NOV 76 Arny Goldfein Bill Heffner . Stan Pearson Mike Tomasic Dept: OOD CC: OOD Ralph Byrd Fd From: Gordon Bell Dept: OOD F/U 12/7

When's an appropriate time to get a decent common format for Product Review (ala Post Partem) so we can put it in the Yellow Book and go to Operations Committee with what we're doing?

Product managers would like information on system size, component, etc. distributions. When can our programs be there?

GB:1jp

į

PROPOSAL

A PLANNING SYSTEM FOR ESTABLISHING PRODUCT STRATEGIES MORE CLOSELY LINKED TO MARKET STRATEGIES THAN THE CURRENT "RED BOOK" PROCESS.

GOALS OF THE PROCESS

- ESTABLISH MORE USEFUL COMMUNICATIONS BETWEEN OOD AND THE
 Marketing Groups.
- PROVIDE VISIBILITY AND BALANCE BETWEEN PRODUCT AND MARKET

STRATEGIES.

- PARTITION RESOURCES AND PROBLEM SPACES,
 - REDUCED HASSLE
 - . QUICKER DECISIONS
 - FORCED CONSIDERATION OF STRATEGIC ALTERNATIVES.
- MAINTAIN STRATEGIC FOCUS BY SYSTEM-SIZE, WHILE INCREASING RESPONSIVENESS TO MARKETING GOALS.
- ACHIEVE A MORE BALANCED POSTURE BETWEEN "TOP DOWN" AND "BOTTOM UP" PLANNING.
- JOINT REVIEW OF PLANS AT VARIOUS <u>LEVELS</u> OF STRATEGIC FOCUS,
 BY GROUPS COMPOSED OF ENGINEERING AND MARKETING MANAGEMENT (HIERARCHICAL AND PARALLEL COMMUNICATIONS).
- ALLOW STRATEGIC ALLOCATION OF RESOURCES BETWEEN TECHNOLOGY AND MARKET DRIVES.
- Foster commitment to plans.

Current ut Burry

A PAIRING OF DEVELOPMENT AND MARKETING MANAGEMENT AT SEVERAL LEVELS, WITH JOINT RESPONSIBILITY FOR DEVELOPING, REVIEWING, AND APPROVING PRODUCT AND MARKETING PLANS. FUNDS WOULD FLOW FROM THE TOP DOWN, ACCORDING TO STRATEGIC ALLOCATION CRITERIAL, AND IN RESPONSE TO BALANCED PLANS FLOWING UPWARD, THESE FUNDS WOULD BE ALLOCATED TO VARIOUS POTS, FORCING TRADEOFFS AMONG HARDWARE, SOFTWARE, PERIPHERAL, AND MARKET ALTERNATIVES AS THE RESOURCE AND FINANCIAL CONSTRAINTS ARE ENCOUNTERED. THE PROCESS WOULD YIELD A HIERARCHY OF STRATEGIES, FROM GLOBAL ALLOCATION AMONG TECHNOLOGIES AND MARKET ALTERNATIVES AT THE TOP, TO MID-LEVEL INVESTMENT STRATEGIES FOR SOFTWARE, CPU'S, PERIPHERALS, AND ON DOWN TO SPECIFIC PRODUCT FEATURES, INTRODUCTION TIMING, SIZING AND POSITIONING AT THE BOTTOM.

THE FOCAL POINT OF THE PROCESS IS "PRODUCT STRATEGY GROUPS". EACH PRODUCT STRATEGY GROUP IS MANAGED BY AN OOD V.P., AND INCLUDES A "PERMANENT STAFF" CONSISTING OF OOD SENIOR PRODUCT MANAGEMENT (CARNES, PICOTT, MILESKI, TOMASIC, ETC.)

STRATEGIC PLANNING LEVELS

A WALK THROUGH OF THE PROCESS

- STEP 1 OPERATIONS COMMITTEE SETS NOR TARGET FOR 2 YEARS.
- STEP 2 00D proposes central and applied engineering spending cut by support, advanced development, product development, etc. 00D allocates technology \$.
- STEP 3 PRODUCT STRATEGY GROUPS, MANAGED BY OOD V.P. PROPOSE BALANCED PRODUCT/MARKET STRATEGY TO BOARD OF DIRECTORS.
- STEP 4 OOD PLANNING STAFF, WORKING WITH PRODUCT STRATEGY GROUPS, REVIEWS PLANS AGAINST CRITERIA OF NOR, PROFIT, GROWTH RATE, MARKET SHARE, ETC. THIS REVIEW IS TO PREPARE DATA FOR STRATEGIC ALLOCATION PROPOSAL BY BOARD OF DIRECTORS (REVIEWED BY MARKETING COMMITTEE).
- STEP 5 AFTER MARKETING COMMITTEE APPROVES, \$ ARE ALLOCATED INTO THE "POTS" (PRODUCT STRATEGY GROUPS), OOD PLANNING STAFF ASSISTS IN GENERATION OF "RED BOOK",
- STEP 6 PRODUCT STRATEGY GROUPS RE-BALANCE MARKET/PRODUCT PLANS, SET SYSTEM (AND/OR COMPONENT) REQUIREMENTS AND FORM WORKING GROUPS TO GENERATE DEVELOPMENT PLANS ("BEIGE BOOK").
- STEP 7 DEVELOPMENT MANAGEMENT (OR GROUP PRODUCT MANAGERS) INTEGRATE ACROSS GROUPS AND INCLUDE OOD TECHNOLOGY FUNDS, PRODUCE TECHNOLOGY PLANS,

STEP 8 - BOARD OF DIRECTORS APPROVES FINAL STRATEGIES.

ALTERNATIVE STRUCTURES FOR PRODUCT STRATEGY GROUPS

BOARD OF DIRECTORS AND/OR OOD \$

KEYS

1 2 3

OOD V.P. IS ALWAYS STRATEGY MANAGER. PLANS REVIEWED (OR FUNDED) IN BOTH DIMENSIONS. "PERMANENT STAFF" OF PRODUCT STRATEGY GROUP CONSISTS OF OOD SENIOR PRODUCT MGMT. (CARNES, PICOTT, MILESKI, TOMASIC, ETC.)

DATE: FROM: DEPT: EXT: LOC/MAIL STOP:

January 21, 1977 Larry Portner

SUBJ:

Since you have asked me to complete the process model right down to all the appropriate details, I would appreciate if in parallel you would do the following: write down your set of goal statements for the process; I'd like to compare your individual sets with each other and with mine, which I've already written down. I will be very interested to see whether or not we have many, or some of, none of, or a conflicting set of goals for the process. This will tell us a lot about our chances of succeeding.

How about by Wednesday?

Thanks.

UC. 76 WT/LP

STRATEGIC PRODUCT PLANNING PROCESS

The current product planning process creates an adversary relationship between OOD and the Product Lines. In addition, because of the lack of clear common goals and limitations, communication and trust has not developed. Within OOD the necessary investment trade-offs between disciplines has been very difficult for many of the same reasons. Given the above, the climate for stable strategic planning has been lacking.

Any new process should foster:

- Better comm.

-mutual trust and understanding -stable strategic planning -clear responsibilities -effective trade-offs between markets and technologies -joint market/product planning -clear expectations from marketing

Strategic planning is matching the desirable with the possible. As such we are, therefore, not talking about either the advanced development funds not the product support monies— these should be handled by other clear processes. The monies we are then talking about are Product Development funds. Refer to Chart I and Chart II for a graphical way to look at the issue.

The point is the people involved in developing strategic alternatives is fewer and higher in the organization versus the implementation details.

In order to help facilitate the trade-offs of engineering funds, it is recommended that the funds initially be broken into pots (3-5 like Commercial, Scientific/ Industrial, Iron, Mass Storage, etc.) to bound the issues. These funds plus marketing directions should be given to teams of senior Product Line Marketing/Product Planning Managers and senior development and product managers. The teams with proposals from the development managers would recommend the strategy for effectively spending the funds to meet the strategic goals or other alternatives they feel would be effective.

The teams would recommend a product/strategy based upon the marketing plans of the product lines. Thus, if the product plan is not accepted, the impact on marketing will be clear. The teams' strategies will be reviewed by a "Board of Directors" made up of senior 00D managers and senior product line managers. This group will make recommendations to the 00D and the Marketing Committee. 00D will, as a group, either concur with the proposals or recommend alternatives. Note this does <u>not</u> include either advanced development or product support funds.

The strategic process would flow as follows:

STRATEGY

-Operations Committee establishes funds for next two years or more.

- -System teams review current strategy, available funding (and performance), and make a product/market strategy (1-5 years) recommendation to the board.
- -Board reviews, interacts, modifies, and makes recommendations to the Marketing Committee/Gordon Bell.
- -Marketing Committee/Gordon Bell approves/disapproves strategy and makes any final trade-offs between the "pots".

IMPLEMENTATION

-System team meets regularly to:

.review progress

.discuss possible modification/alternatives

.recommend approval/disapproval of specific two page business plans (before Development starts to spend monies) on a specific implementation of strategies.

The advantages to such a process are:

- -Development of joint market/product strategies which will create mutual commitment and expectations.
- -Creation of a Board of Directors will foster joint recommendations of senior product lines and OOD (forced interaction between product line managers to OOD).
- -Creation of "pots" will force senior managers to express a first round bias of where funds will be spent.
- -Allow differentiated/focussed investment strategy, i.e. if "scientific/ industrial" understand the need for higher investment, they can fund a higher level.
- -On going interaction of marketing/development by people who can commit their groups to implications of the strategic direction.

POSSIBLE BOARD

Julius Marcus	Ed Kramer
Irwin Jacobs	Dick Clayton
John Leng	Larry Portner
Bill Long	Bob Puffer

POTS

The Product Development Pots are like product lines. They are management's technique to bring focus to the organization. They do not have to be consistent, but they should meet clear goals.

I believe the goals to be:

-Encourage market/product strategies

-Allow technical trade-offs

-Bring a system focus

-Provide mechanism for meaningful top management interaction on strategic level

One alternative is:

Commercial Systems
 Computational (Industrial/Scientific)
 Basic Systems (old DEC)
 Small Systems/Terminals

INTEROFFICE MEMORANDUM

TO: Office of Development cc: Marketing Committee Bill Thompson DATE: January 18, 1977 FROM: Bruce Delagi (for OOD Planning) DEPT: Corporate Planning EXT: 3563 LOC/MAIL STOP: ML-12-1/F41

SUBJ: DEVELOPMENT STEERING PROCESS (PROPOSAL OVERVIEW)

Gordon Bell JAN 2 1 1977

WHAT PROBLEMS DOES THIS PROPOSAL ADDRESS?

Marketing-Development Communication

Many of the product lines have expressed frustration with the adversary relationships and the difficulty of meaningful interaction with central development.

Because of the lack of clear common goals and limitations, communication and trust have not developed.

Product line personnel often appear to development personnel to be involved in ill-informed sniping actions rather than constructive dialog. As a consequence, there is little inclination for development to trust what is heard from product lines.

Commitment to Plans

The authority to form agreements with development on product direction and overall strategy has not been effectively excercised or delegated by a significant number of our product line managers.

In the absence of clear agreements, development personnel perceive that massive upheaval of their plans can occur every six months. This creates instability in operating development groups that is detrimental to their motivation and impacts our ability to develop new products in a timely, efficient manner.

Adaptation versus Extrapolation

While much of the technology can be modeled extrapolatively, we provide an inadequate forum in our semi-annual review for the discussion of our overall plan in terms of:

- o emphasis on long/short term developments (presumably related to economic projections and competitive posture)
- o changes in our markets
 (emphasis on distributed processing, high availability,...,
 reaction to competitors with a different "model of the business"
 e. g. IBM, INTEL, HP, DATAPOINT, ...)

o new markets we wish to be in (investment in commercial applications, intelligent instruments and terminals,...) Development Steering Process (Proposal Overview)

o market acceptance of DEC uniqueness and DEC-induced change (level of adherance to standards, changes in customer interfaces, projected regulatory environments,...)

There appears to be little learning taking place in these semi-annual reevaluations since the same issues are (indirectly) questioned each time without much addition of information or understanding.

There is little visability of our "technology" oriented programs at the level at which senior development management can provide interaction and guidance.

We get locked in to a budget allocation on which 50-100 people have built their plans before we have established clear agreement on where we are going overall.

Planning for systems we deliver to customers does not occur. As a consequence, we may be unable to react to changing customer requirements for systems. Investment tradeoffs between disciplines has been very difficult and is generally not done.

WHAT ARE THE GOALS OF THIS PROPOSAL?

Marketing-Jevelopment Communicatiion

Increased cooperation and understanding between development and marketing groups on the course we follow in the overall direction of our engineering efforts as related to our market plans.

Clear expectations consistent with agreed limitations.

Timely review of product direction to ensure that as a company we know how a development fits with our strategic purpose.

Commitment to Plans

Clear responsibility for the establishment of our direction at each appropriate level in the organization.

Less upheaval of our development operations since marketing and development operate from a common understanding of our purpose and a mutual commitment to plans that are jointly arrived at by development management and authorized, committing representatives of product line managers.

Adaptation versus Extrapolation

Increased learning on the strategic issues that confront us.

More visability on and opportunity for senior corporate management to meaningfully participate in the generation of our development strategy.

Better cooperation between sub-system development groups toward the goal of producing systems complete enough to be more useful to our customers and more profitable to us than those of our competitors are to them.

Page 2

Development Steering Process (Proposal Overview)

WHAT DOES THIS PROPOSAL ENTAIL?

1. Establishment of partitions of the engineering budget by product phase (Technology, Product Development, and Support) so that interactions may be accomplished most appropriate to each segment at several levels in the organization:

Technology

parts a

- Support of long term corporate direction.

(Proposed by OOD, approved by the Marketing Committee and Gordon Bell.)

- Tradeoffs between development disciplines.

(Proposed by development managers, reviewed by senior development management, approved by OOD.)

Product Development

- Market relatable allocation of resources in support of corporate objectives.

(Proposed by OOD with the help of senior product line managers, approved by the Marketing Committee and Gordon Bell.)

- Deployment of resources within market relatable allocations.

(Proposed by development management with the help of product line marketing/planning managers, approved by OOD and senior product line managers.)

Support

- Resource allocation to accomplish NOR, manufacturing cost, and field expense goals.

(Allocation proposed by development management, goals reviewed by MMC or M&E Committee, approved by OOD.)

2. Within the Product Development segment of the engineering budget, allocation of resources by market relatable "pots":

Commercial Environments: System components driven principally by commercial applications - e. g. COBOL, DBMS, TPS, CIS, the VT62.

<u>Scientific/Industrial Environments</u>: System components driven principally by scientific/industrial applications - e. g. FORTRAN, IAS, FPU's, the 11/60.

Base Systems: General purpose system components - e. g. 11/34, STAR, STARLET, RSX-11 kernal, bus structures, memory.

Terminals and Small Systems: Thrusts into developing market areas for DEC with strong emphasis on integrated development to support bounded function, distributed processing products - e. g. VT100, LA100, LA180, TAXX, TA00 networks and communications protocol support, RX01, Annie Oakley. A drive to counter or adapt to the changing market structure being developed by INTEL, HP Instruments Division, DATAPOINT... Ň

Development Steering Process (Proposal Overview)

<u>Data Systems</u> Storage system components planned together to facilitate adaptation to market changes being introduced by IBM (and followed by the "independents") in integrated storage systems - e. g. RMS-11, disk and tape drivers, RKØ6, TU77, RMØ1, BORAM products.

3. "System Teams" of producers and consumers dealing in the products and markets most relevant to the resource allocation pots (above). System Teams meet regularly (monthly) to:

Review progress

As implementation problems surface, discuss and recommend alternate deployments of resources to support market objectives within the established allocation.

Recommend approval/disapproval of specific two-page business plans (before product development spending begins) on specific implementations of overall plans.

- 4. Annual extension of overall plans in line with resource limitations and market objectives.
 - Discussion of market objectives and technical opportunities by System Teams.
 - Reports by System Teams on perceived dependencies, commitments, and recommended direction for their areas.
 - Review of System Teams Reports and synthesis of problems and opportunities for the Marketing Committee and Gordon Bell by OOD and senior product line managers (the "Development Board of Directors").
 - Operations Committee establishment of the resource limit for engineering for the next two years or more.
 - Development of an overall direction and allocation of the OC funds into the catagories discussed above (as well as a Reserve Fund) by OOD with the help of the "Development Board" and the approval of Marketing Committee and Gordon Bell.
 - System Teams review of the current strategy, available funding, and performance and proposal of a recommended product/market plan (1-5 years) to the Board.
 - Development Board review, interaction, modification, and recommendation to the Marketing Committee and Gordon Bell.
 - Marketing Committee and Gordon Bell approval/disapproval of strategy and final tradeoffs between the "pots".

INTEROFFICE MEMORANDUM

TO: Bill Thompson

DATE: December 20, 1976

FROM: Bruce Delagi

DEPT: Corporate Planning (on behalf of the OOD Planning Group) EXT: 3563 LOC: ML 12-1 F-41

SUBJ: DEVELOPMENT STEERING PROCESS (PROPOSAL)

WHAT PROBLEMS DOES THIS PROPOSAL ADDRESS?

The inefficiency of senior product line management's interaction with major development programs is being seen by many of those I talked to as a significant flaw in our development steering process. The PSG's are too numerous and time consuming to attract senior management attention and, perhaps as a consequence, the PSG membership often seems disconnected from the thinking of those responsible for the activity of the product lines. We attempt, with indifferent success, to "batch process" the setting of all product directions on a semi-annual basis. In doing so, we encourage polarization of "Stan's PL" and "Win's PL" product needs. Clear relationships between strategic and product directions are less visible than desired and I think it has proven difficult to pay adequate attention to each of the important issues raised in this Red Book pass within the Red Book process (e. g.the - 11/70 replacement, migration, VAX vis-a-vis 11 strategy, high availability multiprocessor systems, PDQ announcement, Krypton-DK plans, the Mass Storage spectrum, Scientific/Commercial operating environments, Distributed Processing Plans). Well thought through, generally understood plans for each of these issues are not coming out of either the PSC's or the intermittent strategic interaction we are employing.

In our traditional style, we are responding to this need as a company by forming Blue Ribbon Committees and other special interest groups. The drain on product line management resources is becoming burdensome and, if not coordinated, we will certainly find those resources insufficient to the problem at hand. I have developed a proposal based on the thinking of several of the product line managers, staff people, and development managers involved. This proposal is comprised of three elements:

- -Systems Councils to focus on integrated systems planning and provide the ongoing strategic interaction that would allow a less frequent Red Book process to pay more adequate attention to the corporate objectives our developments are intended to satisfy.
- -Partitioning of the engineering budget into Technology, Systems Development, and Support segments so that the appropriate interactions may be held on each piece.
- -Structuring of the strategic process to be clearly responsive to the marketing requests, concerns, business drives, strategic biases,... that are established at the outset of each review interval.

Drive for the proposed strategy, taking these points into account, remains with OOD and is based on its understanding of the overall environment (including competition, regulations, and technology).

HOW DO SYSTEMS COUNCILS WORK?

1. They provide a forum for discussion of inter-development group strategic tradeoffs and for formal review of business plans. They are responsible for testing such plans against the currently approved strategy and recommending authorization of budgets to OOD against previously approved ("strategic") spending levels. The System Councils recommend announcement timing to the Product Line Managers Committee. They provide a force for clear statements of product specs, reason for being, and competitive posture early in development.

(PSG's act as information transfer bodies and can provide very detailed interactions on product definitions.)

System Councils interact with Development Management on product direction at the Beige Book level. As implementation problems surface that impact product direction, System Councils can suggest corrective action to OOD. If these implementation problems cause strategic reappraisals, System Councils can suggest evaluated strategic alternatives to the PLMC and the Marketing Committee.

Planning for product unique dependencies on other component developments (e. g. processor unique memory subsystems, disk drivers,...) will be the responsibility of the dependent council - and the dependent development management.

2. It is recognized that program approval is an asynchronous process. Semi-annual batching of business plan approval doesn't provide enough time for useful review of each program. Thus these System Councils are to meet on roughly a monthly basis throughout the year and deal with each Business Plan in their purview.

(Current corporate policy states that "Red Book approval" is approval to do a business plan, not acceptance of a budget.)

3. The work of System Councils is partitioned so that the most relevant trade-offs can be made between product disciplines and so that the natural producerconsumer relationships are given formal visibility.

(See Figure I)

It is recognized that as a company we sell to our customers at various levels of integration (e.g. for some product lines we tend to sell the specs of our processors and disks, in some we configure the system and sell integrated hardware performance, in others we sell problem solving capacity including the operating system environment).

4. Membership of the System Councils is comprised of systems development and product line consumers who are party to their group's product strategy decisions and long range plans and having the authority to commit their groups on product questions.

It is expected that the total size of each council will be 12-14 members (mostly from the product lines).

Interoffice Memo

Subject: Corporate Personnel Candidate

To:	Win Hindle	Date:	21 JAN	77	
		From:	Gordon	Bell	
cc:	Dave Brauer	Dept:	OOD		
	John Meyer	Loc.:	ML12-1	Ext.:	2236
	Ken Olsen				

An engineer friend of mine recommends Don Zrebiec of Xerox, Stanford, as our personnel director. He's near the top of Xerox personnel structure although not top guy cause Xerox got a random person from field, etc. to be the head.

The reasons:

- 1. He's done personnel for a while; started as a recruiter (at about the same time Xerox was our current size).
- 2. He rose rapidly.
- 3. He's a combination of both an administrator, but with a concern about people (missing in most personnel people).
- He was at Bell Labs and has a feeling about high growth/high technology companies.

Let's try him in an interview! I don't want anymore of the vacuous discussions ala OC, Schein, OC (Jenks), requested 1:1. Let me talk to someone. This general b.s. is a waste of time. Get off the dime!

He also recommended a personnel person at Rochester: Steve McGrath.

GB:1jp

System Council members must provide synthesis of their using group's viewpoints on product proposals. Each using group has the responsibility of coordinating its views between the product areas chartered to each council on which it is represented.

Customer Services is represented on the System Councils in order that they may take timely part in the setting of product service goals for our development programs.

(See Figure II)

5. System Council chairmen will be rotated on a yearly interval from members of the Product Line Managers Committee. The chair's responsibility is to assure that the agenda is relevant to the work of the council and that the discussion is productive to its goals.

(The alternative of chairing each System Council by the development vicepresident responsible for that level of integration builds less corritment by the product lines to the steering process and is a fall back position if it proves impossible to get sufficient porduct line management involvement in this process).

- 6. System Council members, as the key consumers of the developments in their charter area, receive monthly status reports on the development projects that are the domain of that Council. It is expected that these reports highlight any changes in the product specs, reason for being, and competitive posture that occur after program approval.
- 7. Staff support to the System Councils will be provided by Corporate Planning in order to establish a consistent level of interaction. Scheduling of System Councils will be controlled to facilitate common representation of a consuming group on all System Councils.

(See Figure III)

8. Minutes of System Councils will be distributed to OOD and the Product Line Managers Committee. System Council chairmen will report on an as needed basis to either of those groups.

HOW MIGHT WE PARTITION THE ENGINEERING BUDGET?

- 1. Parcel the engineering budget by program phase so that those most involved in each phase focus on the issues appropriate to that partition.
 - o TECHNOLOGY BUDGET through product definition

Issues: feasibility, relevancy

o SYSTEMS DEVELOPMENT BUDGET - through product introduction (includes enhancement projects)

Issues: clear specs, competitive position, reason for being

11.	Ι	Storage Systems	Tapes	(Peyton)
12.	II	Small Systems & Terminals	Terminals	(Corell)
13.	IV	Operating Environments, Networks & Communications	Networks & Communications	(Plowman_& Bastiani)

o SUPPORT BUDGET - through product retirement (maintenance level only)

Issues: Maintenance strategy, inventory control, phase-in/phase-out

2. Allow graceful mid-course correction

o DISCRETIONARY BUDGET

(Allows a selected few, good new ideas that are not aligned with the previously agreed-to strategy to be pursued with limited disruption of our other plans.)

- 3. OOD would be assisted by providing forums from which they can get thoughtful, careful analysis and formal recommendations on proposals appropriate to each partition of the development budget. The System Councils described above provide that help to both OOD and the product lines for the Systems Development budget partition.
- The Technology Council, a working group of key development managers, will provide a cross-functional viewpoint on significant problems and opportunities in technology.

-Interacts on technology strategy with OOD. It develops the recommended budget by functional area but leaves decisions to invest in promising ideas in the hands of each development manager. It reviews progress on each functional area's technology plans twice a year on a round robin basis. Some of the Technology Budget may be reserved by the Council for apportionment at a later time.

- -Ensures that we are developing responses (and drives when appropriate) to emerging industry, national and international standards and regulations.
- -Example Membership: Jim Bell (Chairman), Grant Saviers, Ed Corell, Lorrin Gale,Brian Croxon, Vince Bastiani, Len Hughes, George Plowman, Bob Peyton, Jim Marshall, Pete VanRoekens, Mike Titlebaum, Phil Tays

-Meeting Frequency: Monthly

- -Minutes Distribution: OOD and area (e.g. Europe), functional (e.g. Manufacturing), and product line planning managers. It is expected that the minutes will include program goals and that the Council chairman will solicit review by relevant outside parties (e.g. Customer Services, Manufacturing, European Marketing,...) as required.
- 5. Marketing Managers Committee is an existing operational group concerned with the three to four quarter time span relevant to introduction strategy, particulary inventory control and phase-in/phase out questions. The maintenance strategy issues and a review of each product area's significant business problems and opportunities would be most relevantly presented to this committee.

HOW IS ALL THIS TIED TOGETHER BY THE STRATEGIC PROCESS?

The work of these committees is intended to off-load the current Red Book-Beige Book process of much of the almost operational content it now carries (e.g. product direction, budget approval,...) The Strategic Process would be better focused on longer term perceptions of environmental changes and would overview course corrections. It would address cross-council functions:

- -Is our perception of the economic forecast best met with a heavier/lighter emphasis on Technology (4 years), Systems Development (2 years), or Support (1 year or less)?
- -Do our projected markets require a heavier/lighter emphasis on small systems, on medium scale computer systems, operating environments, or on mass storage systems?

The Strategic Process would tend to deal more in "spending levels" (authorization to prepare business plans) than "budgets" (authorization to hire or purchase).

The Strategic Process is kicked off by an OOD proposal that reflects:

- -Product line long range plans (forecast implications, corporate concerns, and business drives) integrating many inputs to the product lines (including the monthly Council reports).
- -Yearly Council reports by the Systems Councils, the Technology Council, and the Marketing Managers Committee. These reports layout the position of each of these groups on current status, committments, and a recommended future direction.

Calibration of status, committments, and direction in quantitative terms (including historical and projected revenue and expense) is included in these reports.

OOD's "Proposed Guidelines" (above) state OOD's position on the:

-Technology outlook and a proposal Technology spending level .

-System Development status, objectives, and committments (including the implied expense level) and a trial allocated spending level by system area:

o Commercial Environments

o Scientific - Industrial Environments

o Networks and Communications

o Unibus and Multiprocessor Systems

- o Small Systems and Terminals
- o Storage Systems

-Support Strategy and a proposed development group/product management allocation.

THE MARKETING COMMITTEE PROVIDES APPROVED GUIDELINES TO OOD

The Marketing Committee Approved Guidelines establish the:

-Technology Spending Level and an expressed Marketing Committee long term development interest for the Corporation.

-Allocated Support Budget.

-Allocated System Development Spending Levels and the Strategic biases, concerns, and ideas that are to be tested in the current pass of the Strategic Process.

Figure JV shows the flow of the Strategic Process. The partitions of the Engineering Budget are handled individually after the Approved Guidelines are established. (see below)

SUPPORT BUDGET

The Allocated Support Budget is provided to appropriate development managers. No further attention is paid to the Support Budget at the strategic level but monthly interaction continues at Marketing Managers Committee on the implementation of the support plan.

TECHNOLOGY BUDGET

The Technology Spending Level and the long term interests for the Corporation expressed by the Marketing Committee are used by OOD in developing the Technology Council Guidelines which are used in turn by the Technology Council in developing a proposed allocated and unallocated Technology Budget. OOD provides development managers with approved technology budgets and provides the Technology Council with a reserve fund that they approve additional projects against throughout the year.

SYSTEMS DEVELOPMENT BUDGET

The guidance of the Marketing Committee is provided to PIMC and OOD so that they may position the System Councils and allocate system development spending levels to each development group. These groups are responsible for proposing the system development strategies pertinent to their area to the relevant System Councils. It is expected that development groups will integrate their proposals so that the System Councils can most efficiently deal with the proposed development strategies. (Please see Stan Pearson's "Systems Teams- A Proposal"). Interaction is concluded at the discretion of the System Council chairpersons and is documented in Council Reviews and the OOD Strategic Plans. The Strategic Plans responds to the original Marketing Committee guidelines in terms of the effect of the biases that were applied by the Marketing Committee, the concerns expressed by them, and a report on the ideas that the Marketing Committee wished to be tested.

The Marketing Committee uses the Reviews and Strategic Plans in granting Approved Allocated Spending Levels to development managers and System Councils together with communication of their remaining concerns and any additional guidance they wish to provide these groups for use during the year.

The approved spending levels, remaining concerns, and guidelines are the background against which business plans and budgets are approved during the year by OOD upon review and recommendation by the appropriate System Council.

INTEROFFICE MEMORANDUM

JAN 2 1 1977

DATE: 21 January 1977 FROM: Stanton Pearson DEPT: 0²D Planning EXT: 2424 LOC/MAIL STOP: ML12-3/El3Gordon Ben

SUBJ: 24 JANUARY 1977 AGENDA

- TIME: 11:00 to 1:00
- PLACE: COSMIC ROOM, ML12-3

ATTENDEES: Bauer, Mastendino, Sanjana, Kandra, Delagi, Pearson, (Goldfein will be out of town)

1. Discussion:

Where are we on the Development Steering Process?

- . Jan 25 Woods called off--Pearson
- . Input for Feb. 2 4 0^2 D Woods--Pearson
- . Latest thinking on Red Book partitioning--Bauer
- . Documented DSP Proposal--Delagi
- . Thoughts on System Cuts, Charter, Product Fit, Membership--Pearson
- 2. Discussion:

Spring '77 Planning Goals?

- . Formal 0^2D Review and Partitipation
- . Focus on FY78 quarterly budget
- . Fine tune FY78 strategy
- . Establish FY79 spending targets
- . Start April 1 - Finish Mid-May
- . Review with Marketing Committee last week in May
- . Red and Beige Book addendums only--not a complete update
- . Output of Spring pass is keyed to the June Board of Directors Meeting for FY78 budget.

Page Two Agenda 21 Jan 77

3. Discussion:

FAll 177 Planning Goals

- . Formal 0^2 D Review and Participation
- . Key off P/L Long Range Planning exercise in July/August
- . Start September 1 - Finish Mid-October
- . Formal statement of alternatives and impacts at the beginning of the cycle
- . Two issues of Red/Beige Books at the end of September. We put out draft in Mid-October; we put out the final for review with Marketing Committee.

The discussions should provide the basis for a presentation to 0^2D on goals, process, and calendar for the Spring and Fall 77 planning cycles.

Subject: Planning Architecture Charter

	Stan Pearson	F/U 12/27			
	Jim Bell	Loc.:	ML12-1	Ext.:	2236
CC:	OOD	Dept:	OOD		
	,	From:	Gordon	Bell	
To:	Larry Portner	Date:	9 DEC '	" õ	

As original author of the Red Book process will you work with Stan, Arny, Bruce and the rest of OOD to significantly revamp our planning process? Since Stan will be full time on this January 1, clearly he needs to work out his charter (he's got a draft).

Some of the naughty problems connected with this:

- 1. how do plans of various groups tie together? Systems? Hardware Systems?
- 2. How does the product plan tie in with the organizational and space plan that Bob was chartered with?
- 3. How do we keep planning from consuming us? How big is the group involved here?
- 4. How does Jim monitor R and Advanced D across the groups to review (and give us an independent assessment) whether there is adequate technology?
- 5. What are groups? Process?
- 6. How does Arny get information to relevant people for existing programs (e.g., Yellow Book)?

Please help...get to OOD soon for kickoff dinner.

GB:1jp

....

CORDON, REMEMBER THIS? I WROTE IT ABOUT 2 YEARS AGO, I BELIEVE IT STAL DEFINES FAIRLY WELL the FOLUS OF STAL PEARSONS NEW ROLE JP.

1. RECOGNIZE THE BUDGETING AND PLANNING PROCESS AS TWO PARTS OF A WHOLE.

Gerdon Belt DEC 0 8 1976

EXTEND THE PLANNING FRAMEWORK 8 QUARTERS.
 ENGAGE IN MINOR DEFLECTIONS NOT MAJOR UPHEAVALS.

3. Allow an orderly process for the OOD component groups to "plug into".

- 4. ALLOW A MIX OF TOP DOWN AND BOTTOM UP IN THE PROCESS.
 - . Key strategy direction from OOD
 - . PLANS AND INTERACTIONS WITH PRODUCT LINES FROM OPERATING GROUPS

- 5. OPPORTUNITY TO GET OUR ACT TOGETHER
 - . Before exposure to DEC world
 - . FEWER INSTANCES OF UNCOORDINATED PLANS, BUDGETS
 - . OOD MANAGEMENT SETS THE TONE FOR EFFECTIVE INTERACTION AMONG THE GROUPS
- 6. Use "Market Requirements" documents to focus Product Lines on long term market goals.
 - . Allows OOD to be creative in Product Planning
 - . Allows Product Lines to integrate their plans

7. PROVIDES CLEAR INTERFACE WITH PRODUCT LINES, MARKETING COMMITTEE.

- 8. OOD "STAFF" ALLOWS PLANNING EXPECTATIONS TO BE COORDINATED, ADJUSTED.
 - . PLANS MORE LIKELY TO "FIT" TOGETHER
 - . Allows us to focus on strategy <u>AND</u> plans

9. ATTEMPT TO SUBSTITUTE PLANNING AND DIRECTION AT FRONT END FOR HASSLE AND DISAPPOINTMENT LATER.

- 10. Forces us to document our plans and strategies.
- 11. This is not intended to replace other "processes" underway, i.e., Disk Strategy Group, Multi-Processor Task Force, Small Systems Strategy Group, etc.

CHARTER FOR OOD STRATEGIC PLANNING

General

Establish OOD planning and feedback methods to be consistent with emerging changes in size, market focus and geographic distribution of Corporation.

The emphasis will be on developing a PRACTICAL method for Product Strategy, Implementation and Result Feedback planning.

- A. PRODUCT STRATEGY
 - System focus, the integration of Software, CPU and Peripheral product strategies into system level plans.
 - Major influences are: Market Requirements from Product Lines; Technology from Software, CPU and Peripheral Eng.; Strategy guidelines approved by Marketing Committee.
 - . Provide a more rational framework in which to make trade-off decisions.

B. PRODUCT IMPLEMENTATION

- . Responsibility of Development groups
- . Effort here is to provide visible linkage between Strategy and Implementation.
- C. RESULT FEEDBACK
 - . Provide a mechanism that will allow timely visibility to significant deviations to projected results that would influence future resources and plans.

SHP 10/21/76

Specific

Reports to Vice President of Engineering

- Coordinate the Central Engineering planning interface groups in evaluating System Strategies in such areas as:
 - Market and technology trends
 - Opportunity trade-offs across software, CPU, and Peripheral areas.
- Works with Corporate Planning and Marketing Committee to ensure consistency with Long Range Plans of the Corporation and establish OOD strategy guidelines.
- Manage the integration of Product Plans produced in the three (3) engineering groups within Central Engineering.
- Coordinate the statement of OOD plans to the Corporation via the Red/Beige Book.

The Strategic Planning staff will be a direct report to the Vice President Software Development and Advanced Systems.

- Overview, evaluate and critique the product strategies as they relate to
 - market trends
 - technology trends
 - technological opportunity
 - competitive activities
 - industry trends
 - technological opportunities in the hardware/software tradeoff dimension
 - subsystem development
- Maintain a consistent high-level overview to provide a longer term focus on product development trends versus alternatives.
- Coordinate development of the Red Book, Beige Book, and all other Product Planning-Business strategizing within the organization.
- Coordinate the Planning interface with other OOD activities, including the OOD Planning group, CPU and Peripheral development.
- Working with the Technical Director, integrate the <u>Product Plans</u> and the Technical Strategies into a coherent whole.
- Coordinate and aid the integration of the Product Plans produced by the three (3) groups within Software Development.

January 4, 1977 Larry Portner

JANI D & 1975

SUBJ: OBSERVATION

We can't run Engineering like the corner candy store for a billion \$+ company; we should be investing heavily now in building the management structure, processes, controls, and the like, that will enable us to implement our operational philosophies in the future. I don't believe that the Marketing Committee model of part time marketing management (while their real jobs are running businesses or the Sales department) will work for OOD. I believe it's time for us to discuss a radical restructuring of OOD. I believe the present system of casually distributed responsibility is unworkable.

SUBJ: A Comment on Your System Council Proposal

> Separate the Strategy Planning function from the funds allocation responsibility of OOD or I believe the following will result:

1. There will be a complete loss of strategy level focus and only project level budget hassles will remain.

2. Part time participants from outside the development organization will not be competent to allocate funds across the multi-dimensions of advanced technology, system development, engineering services operations and development, and product support functions as well as achieving a resource distribution associated with product development strategy.

Confusion on who will be held accountable for the 3. results: A committee that dictates plans rather than approves them, or OOD management who do what they are told (only slightly overstated).

To try to be more constructive, I would suggest the following:

a. I believe your division of the System Councils is the cleanest such division along the system dimensions I have yet seen proposed. While you are not far from it, I believe that the funds allocation path must follow organizational lines to be stable. Therefore, I would work toward the restructuring of OOD to match your system groups. In the interim, I would strongly urge that the OOD members themselves chair these councils and that they then act as strategy level advisory boards to the manager clearly identifiable for the results. That is, the System Council can then be forced to keep its focus at the strategy level and can assign priorities to its recommendations to aid OOD management in its task of allocating resources.

b. OOD (synonomous with System Council chairman) would get agreement with the Marketing Committee on the relative strategy emphasis to be placed in each domain. This allows OOD to set its budgetory levels, which I believe is doable amongst four people, but is not achievable with a cast of "many".

c. I would further suggest that each council chairman (OOD member) identify what he considers as stable or committed elements of his world based upon the "corporate thrust" level of agreement from the Marketing Committee. We need to find a way to confine the discussion space to only that which is realistic to spend energy in.

In summary, we need a process that provides a top down planning overlay to our bottom up driven implementation heritage. I personally feel very strongly that this planning process should be kept separate from funds allocation which must be maintained by the responsible OOD manager. Your breakdown of the System Council areas is a very good start to improving our planning process, if we can keep it a strategy planning function and not an unstable project level budgeting roller coaster.

Martin For DATE: 28 December 1976 Stanton Pearson 4400 0 3 1977 Software Product Management 1977 FROM: DEPT: EXT: 2424 10 JANUARY WOODS MEETING REMINDER - D, you have ac month LOC/MAIL STOP: ML12-3/E13

SUBJ:

BACKGROUND

On November 22 most of the direct reports to Puffer, Clayton, and Portner (13 people) held a four-hour Woods Meeting to discuss concerns, objectives, scope, and followup program for proposing refinements to the Development Steering Process (DSP) to O²D. The January 10th is the second in a series of three Woods Meetings for development of the DSP proposal. January 25 is tentatively scheduled as the third and last (if things go as well as expected). My intent is to keep O²D informed during the development stage and present the proposal for approval in early February.

Minutes from the November 22 meeting are attached for the readers' convenience.

PROCEDURE

We must start now if the exercise is to have a favorable influence on the Spring '77 Planning Cycle in April/May.

Several areas will need focus and coordination as we refine our Development Steering Process. An example is the relationship between Red, Yellow, and Brown Books and the Product Business Plans etc. Proposals will initially be presented to those listed. When we feel the proposal hangs together we will present it to 0^2D for approval. An O²D planning group has been formed and is meeting weekly to coordinate the overall effort. This group has representatives from CSD/F. Sanjana, Peripherals/ P. Bauer, Software/S. Pearson (acting), Finance/A. Goldfein, Corporate Planning/B. Delagi, Secretary/M. Kandra, and O²D/S. Pearson.

Minutes of these meeting will be issued to those listed and copied.

JANUARY 10 WOODS MEETING

- Purpose is to review proposals on refining our Development Steering Process.
- Time will be 11:00 to 6:00 with lunch provided.
- Place will be Colonial Inn in Concord.
- Agenda will be Proposals presented on:
 - Future Red/Beige Book Partitioning (Bauer)
 - Development Steering Process (Delagi/Pearson)
 - Funds Flow (Goldfein)
 - System Teams (Teicher, Picott, Tomasic, Mileski)
- Attendees will be those listed.

SHP:ssc Attachments (2) Proposals should be presented in the context of objectives, recommendations, and benefits. Presentors should be prepared to discuss alternatives rejected and rationale.

- 11:00 to 12:00 Future Red/Beige Book Partitioning (Bauer)
 - . what should it be in the future?
 - what can we accomplish in Spring '77 pass?
 - how does it fit in overall DSP and relationship to Yellow Book, Brown Book, PL Long Range Plan Books, Product Business Plans, etc.?
 - who will author various sections?
- 12:00 to 12:30 Buffet Lunch
- 12:30 to 1:30 Development Steering Process (Delagi/Pearson)

By January 10 B. Delagi and/or S. Pearson will have discussed proposals with attendees and those copied. Proposal addresses current and future environments for planning. Emphasis is on a more productive, lower hassle process for achieving plans that balance such factors as:

- time spent planning vs. implementing
- . market pull vs. technology push
- . committed vs. contingency funds
- advanced vs. applied technology funds
- etc.
- 1:30 to 2:30 Method of Funds Flow and Monitoring (Goldfein)
 - . how does it happen now?
 - . problems to be solved?
 - . potential impact of problems?
- 2:30 to 6:00
- System Cuts and Teams (Teicher, Picott, Tomasic, Mileski)
 - system cuts?
 - . charter for system teams?
 - membership? .
 - product fit?
 - how often to meet?
 - formal minutes?
 - . how do teams interact with each other?
 - . can system teams start by February so they can influence the Spring '77 planning cycle?
 - how do we integrate the output of the system teams?
 - other key questions to be answered?

This is a packed agenda. We will attempt to keep on schedule by listing items that need further work by our January 25 Woods Meeting.

INTEROFFICE MEMORANDUM

SHP:76:236

TO: Those Listed

DATE: 9 December 1976 FROM: Stanton Pearson DEPT: Software Product Management EXT: 2424 LOC/MAIL STOP: ML12-3/E13

SUBJ: MINUTES OF 22 NOVEMBER 1976 MEETING

On 22 November a half-day Woods Meeting was held between key development and product managers within Central Engineering (13 attendees). The area under discussion was our Development Steering Process and was exploratory in nature.

- 1. We attempted to identify issues, influencing factors, and questions to be answered by the Development Steering Process.
- 2. Define the objectives of the Development Steering Process (see Appendix III)
- 3. Define scope.
- 4. Agree on a follow-up program and time frame.

The first couple of hours we kind of wandered around discussing issues of the day (see Appendix I). After that we started to focus in on some more specific topics. Namely, the partitioning of the Red and Beige Books for the Spring cycle to get more system focus. Basically, the group finally came to a tentative agreement for four system cuts (see Appendix II); Commercial, Scientific, Small Systems, and Iron. We also agreed on a system chairman for each one of these four cuts. The chairman was given the objective (with the help of others) to examine mission, product fit, interface between the other groups, etc. These teams have agreed to meet between now and the beginning of January and present their views to the group around the second week in January.

Delagi, Goldfein and Pearson were asked to present an overall Development Steering and Funds Flow Process to the group by the second week in January.

I believe that it was a very productive meeting and that this forum should enable us to develop closer working relationships between the various Central Engineering Groups.

Basically, we agreed to meet again as a group during the second week of January. The meeting will probably be a full day and consist of:

A. Presentation of Development Steering Process

B. Funds Flow Methodology

Page Two MINUTES 9 DEC 76

- C. Red and Beige Book partitioning for more system focus -Commercial, Scientific, Small Systems, Iron, plus alternatives
- D. Agree on follow up program
 - . Firm up System Teams and their missions by mid January.
 - . Get O²D buy in end January and Product Line buy in early February
 - . Explain to rest of organization during February
 - . Add System Focus to Spring Red Book in April/May.

APPENDIX I

(

()

1

ISSUES AND CONCERNS

Bill Heffner	1.	What means System Management? For example How would the multiprocessor flow through Commercial Systems, Scientific Systems, Large Systems, Small Systems, etc.
	2.	O ² D Strategy is there; acknowledge it, clearly define it, and then manage it.
Steve Teicher	1.	Let's agree that we have an overhead planning function, identify the benefits, and use it.
	2.	More business planning versus project planning, e.g., manufacturing considerations, support con- siderations, etc. should be included.
	3.	Who wants to know what and when in the planning process needs to be clarified.
	4.	Frame work for hearing and selecting alternatives needs to be clarified.
Ed Corell	1.	Are we being honest with the Product Lines and with ourselves with our current level of planning.
	2.	The future may be more difficult to deal with if we keep old methods to meet expanding needs.
	3.	Zero sum budgeting pits one engineering group against another with non-productive results.
George Plowman	1.	What we really need is an identified process for evaluating and making funding decisions and then give it time to mature.
	2.	Once we have an identified process we need con- tinuity of that process. Last Spring we were working hard on an eight quarter rolling budget; this Fall we are working on an annual process of FY78 and FY79.
	3.	We need more strategy.
	4.	We start implementation before planning and this often sets higher expectations than can realized.

APPENDIX I

(

()

ISSUES AND CONCERNS

Bob Peyton	1.	Longer view needed for what funding level is likely to be available.
	2.	Red and Beige Books good for visibility on Family Strategies.
	3.	We budget annually, and we spend quarterly; we should get the two in sync.
Bill Picott	1.	No O ² D Strategy Frame Work in which to gen- erate sub-strategy for product families.
	2.	Product Lines never really sign off on Red and Beige Books; therefore, they are never committed to them.
	3.	Business Plans - we need a process on how to generate them and measure against them. We need more system focus, but sub-system focus and component focus must not be lost in the process.
Mike Tomasic .	1.	Product Lines do not feel they have a proper balance of control over how O ² D spends the bucks.
Frank Sanjana	1.	More logical and objective methods of fund- ing projects is needed.
· .	2.	Some of our problems are (maybe) due to some semantics. For example, objectives, strate- gies, tactics get used interchangeably and differently by various people.
	3.	Let's agree on the expectation for this par- ticular meeting (we stopped at this point and spent some time doing that).
	4.	Let's be sure that we get some hard follow up plans to this meeting so that it is not wasted.

APPENDIX I

ISSUES AND CONCERNS

Arny Goldfein	1.	Identify by market segment where our products really are targeted and where our hedges are and where we have unnecessary exposure.
	2.	We must have a better process to develop a selected few future alternatives. That means we must look further out.
Jack Mileski	1.	How to get more system focus without losing current sub-system and component focus is the issue.
	2.	Better quantitative measure of plans so we know when we get that. Product Management cannot get data integrity on actual product performance.
Bruce Delagi	1.	Product Line Managers do not seem to be invol- ved enough in the Development Steering Process.
	2.	Too much tactics, not enough strategic content in the Red and Beige Books.
	3.	More top down directions, at least on areas of concern are needed from marketing committee.

Ed Fauvre

< 12

-

 Need to reevaluate the funding algorithms for R & D Applied Engineering for Software, CPU, Peripherals, etc.

Page 3

APPENDIX II

RED BOOK PARTITIONING

Current: CPU, Peripherals, Software, Communications, Memory, LSI; and R & D.

Future: Systems, Sub-Systems, R & D

System Alternatives (Marketed related by size):

- A. Commercial, Scientific, and Iron by size (three teams).
- B. Commercial, Scientific, and Iron by size (three teams) plus a fourth to focus on Small Systems.
- C. Time Sharing, Real Time, Transaction Processing, Multifunction and Iron by size (five teams).

Alternative "B" was chosen as the most likely one at the time and four chairmen were agreed on to do further evaluation on these cuts--Commercial, Picott; Scientific, Mileski; Iron, Tomasic; and Small Systems, Teicher.

We discussed Distributed Processing but did not come up with any answer on how to handle it in the Systems context. I have asked Plowman/Corben to address this at our January meeting. GROSS OVERVIEW OF RED BOOK CYCLE

APPENDIX III

- OBJECTIVE: Provide a vehicle between Central Engineering and the Product Lines that documents the interaction on Directional Strategy (Red Book) and Implementation Strategy (Beige Book).
- PURPOSE: To coordinate and analyze market and technology inputs against existing plans and translate these into a revised set of strategy alternatives, recommendations, and rationals for Central Engineering implementation.
- METHODOLOGY: An annual effort with a mid-year (Fall) review and position paper to set the platform for the next annual approval cycle (Spring). Plans will be generated by the implementators. The collective set of plans will be coordinated by a Strategic Planning agency within O²D.

SUBJECT: URGENT PROBLEM

I think we have a problem which has been going on for a long time, which I haven't seen clearly, and I think should be solved by the Group Vice Presidents Committee with the upmost of urgency.

I have long been dismayed as to why so many of our product line products have been poor, and why it has been so hard to pin down responsibility for them. I think I now understand the problem, and I'll leave it with you and your committee to, with all haste, find the solution. Lowend

Gordon Bell claims no responsibility for the products which he contracts with the product lines. He says they have to work with the "Golden Rule" principle, and the product lines have the goal. They try in vain to encourage the product lines to do wise things, but the product lines usually don't understand, and insist on doing it their way. Gordon has a list of seven or eight personal, professional or specialized, smart or almost smart terminals which he thinks were incompetently done and unnecessary. These include GIGI, Minc, and so forth. These were defined, ordered and often done by the Product Lines and he claims he never believed in them and if we had not done them, we might have had a computer that could take care of all the needs. I am frustrated by this statement, and feel we have to change our system for doing things.

The product lines, on the other side, claim they cannot be held responsible, because they claim they cannot get Engineering to do what they want, and when they do, it is always late.

The result, from my point of view, is that I can't hold anyone responsible, and I think that is the ultimate of poor management. This has to be changed immediately. (I am always fascinated to see that with the same product on those days when the product is good, everybody claims responsibility, and those days when the product looks amateurish, late, and uncompetitive, no one is responsible.)

A current example of this problem is the 278. The 278 is our 1982 new professional computer to compete with the first wave of Japanese personal computers. In many details, the product is very good. In many details, it looks quite amateurish. I've been, for a long time, trying to find the loop holes and find out who is responsible, but I'm apparently just upsetting people, and probably continue to be frustrated forever, because there is no one to be held responsible.

Please solve this problem in your committee.

********* M:RDBEcc: SI LYLE D: 21B 1 :5ST TG: MARNETING C EXT:6 to Eng. shift . + N AVRAM MILLER LOC/MAIL STOP: ML12-1/A51 PICOTT 4 1981 T MAR SUBJECT: UURGENT FROBLEM: RESPONSIBILITY FOR LOW COST SYSTEM For our disussion at GVPC: Independent of whether I have be able to help build better low end personal computing terminals, historically we have tried and senerally have done poorly (market share, profitability, quality). Gen. Motors PRODUCT HISTORY The products arena, over the past 6 years and currently: VT8/E (Reuters), VT14(orisinally (GM for PDP-14) Product VT30, 31, etc. by CSS for weaving, mimic diagrams, tv VT15,GT40, GT60, Mesatek (lab and ensineering graphics) all created. VSV11 (Graphics and Image) LDP, now CSS VT20,21,71,171, etc. for Typeset also Tektronix based fer customer-de mand -LA36/BSR, LA36/TU60, LA120/TU58 (AT&T), LA44, VT134 ₩DT130, PDT150 (for ADP) - customer drive Mine, Mini-Mine, TLC 🔫 i.e. in Gisi, Gisi 1.5 VT103 (TFG) - Terminals Prod. Grap (Andy Kunles)] DS315 11/23 - Product Line WHY IT HAPPENS Our structure and the basic P/L_Bill of Rights (which I do not advocate changing), created the problem. Some of the forces: Customers specialized maused 6) Perceived specialized market need (caused about 20) .Ferceived general purpose, high volume opportunity (5) The components are available, and it's about the only riece of hardware that a P/L can afford to engineer They are fun to start. It is the one product that can be built according to the classic model: -gB: Sure fine disaster // marketing specifies and engineering builds it .The market is perceived to be sufficiently different that no se system can be built (Apple disproved this!) ... hence no common system was able to be defined The engineering budget was not large enough to cover this evolving part ... for example, the whole WPS P/L had to be started up to start one and , and , gBreapons. SOLUTION Now that we have recognized the problem, let's solve it. Technology is changing making engineering cost higher, product costs lower, and unprofitabity clearer .We are doing a system to cover many of these areas Near term, Ensineering is taking responsibility for 278

Ensineering will operate 'modified Golden Rule': Will operate with Business Flan and Phase Review Will get an outside assessment of product viability

Review the current terminal and PM's ... there are lots more lurking losers. Put the \$'s in low end PC's!

PRODUCT LINES PRODUCTS (Proposed Position)

PHILOSOPHY

As a company, we design and produce the best possible products with minimal overlap, in order to maximize our developent investment return across our customer base and markets.

Engineering will be responsible to present an overall plan for all products they will design and build, including product line products.

Engineering will be responsible for stating how their plan for corporately-funded products responds and differs from Product Group requests. Product Groups will have the opportunity to propose changes to the Operations Committee. If they have a convincing case for changes, Engineering will be asked to redo their specific plan, generally within the plans of a specific Engineering Group.

Overall, financial limits or interdependencies of engineering groups' plans may ultimately force changes to the overall plans of Engineering, but the goal is to reduce this to a minimum for the sake of stability (motivation, probability of meeting schedules).

PRODUCT LINE PRODUCTS

When Central Engineering is funded by a specific Product Line (or limited set of PLs) for a product, they have the responsibility to make their disagreements clear, after each side has thoroughly communicated about market and product details.

The Operations Committee will listen to the arguments. Once a decision is made reviewing the tradeoffs, Engineering is bound to fulfill the schedule and contract. Engineering managers for the products are responsible for the schedule and contract. PLs are responsible for the concept (market positioning), and Engineering is responsible for formal support of the approved plan.

Product Line products which will be engineered <u>in</u> the Product Lines themselves are subject to the final review and approval process (April LRP and regular final reviews). Engineering, with advance notice to review these products in the context of the corporate product set, wil have a formal opportunity to critique these products and a functional responsibility to pass on the quality of the design.

Footnote:

Individual opinions and recommendations on specific product plans, both marketing and design function, are strongly encouraged. They must, at a minimum, be sent to the Group VP Committee for visibility and consideration, care of the VP, Corporate Marketing.

When you prepare a presentation on Word Processing for the Operations Committee, before you bring it to the Board of Directors, you might discuss how you will or how you have made a decision as to which of piece of equipment you do the standalone word processing on. It is not obvious whether we should ever change from the PDP-8 based system, and if you propose going to the 11-based system, I think it would be worth explaining why you picked the specific system you do pick.

KHO/er K01:S3.85

I wanted to get rid of it - due to very high support and unprogrammatutes. Not thit art page of thoughts - for an article on Why we needed to get out of it.

TO: KEN OLSEN

cc: STAN OLSEN

DATE: SAT 25 APR 1981 FROM: GORDON BELL DEPT: ENG STAFF EXT: 223-2236 LOC/MAIL STOP: ML12-1/A51

SUBJECT: RE: WORD PROCESSING PRESENTATION AT OPERATIONS COMMITTEE MTG.

Stan,

I hope you take the opportunity describe to the board the effects of architecture on programming complexity and on the ability to have effective higher level languages.

It is important for them to understand these effects as it relates to the cost of programming, the time and ability to provide certain features, and how these affect our competitiveness. Examples could be given at the assembler level, together with the investment cost (which is now about 10M in the 100K instructions, together with the incremental cost to add features). I would also recommend that these be presented in terms of the overall life cycle model.

As a second part as to why the 8 will not be viable "forever" you might explain to them the long term viablility of complete chip level systems based on industry standards, etc. and how price and volume have historically been related.

Also, wou might present historical information on how effective we've been in the past in our ability to be competitive, to sell high level l and to be profitable since the BA in these marketplaces. You might also give the historical decsion which let to the 11, including the difficulty that Ken had in convincing Nick to do it. Also, note we were successful in this then, and that we do no longer redesign system level 8's.

If we are successful in setting our act together vis a vis the new computing terminal family, then you could very nicely show the learning curve effects on cost and why we would base subsequent systems on the 16-bit architecture both to get features and cost. The competitive architectures such as Wang (using the z80A ... capable of addressing more bits) might show at least empirically why there is a dilema. We might also discuss what appears to have been a unilateral decision by the operations committee to continue the 8 effort to the present non-cost-effective 278 and not get a cost-effective 16-bit product. I think this is a great opportunity to discuss this important issue with the board and to clarify our thinking.

To me, these are the important issues we should be workind with the board on. I'm sure that Ken dets these issues at Ford es. whether the Thunderbird is necessary diven the Mark IV, Monaco. super Mustand, etc. The positioning of these relative to each other are far more important than dettind something that tech. bottoming. will be really great and competitive with the Japanese and German cars.

Personally, the 8 was my first computer design, and if it lives forever, it will be the first computer to ever do that. However, if it doesn't, then I'll understand too.

I'm slad you have this incredible amount of time to discuss this policy stuff. To me, this means we are really in control of the market stuff and that we are so confident that the 278 is the greatest thing ever, and hence we will be able to redo it. Maybe I missed something, and I suspect you really don't want to bore the board with the tactics of between June 21 when we start shipping and the subsequent 3 years as to Just how the system is going to be marketed and profitable.

B. O. Evans, from IBM save us a pitch on the japanese and one likely product is the 256Kbit ram. Given that the 8 can only address 32Kbits, and the cost of chips tends to evolve to the package cost, then in order to stretch the 8's viability out till this chip arrives (say in 84), we'd better start working on the mods to the 8 to accept it. Also, we'd better figure out how we can set another approach to programming, cause no way can we ever fill that amount of program space with useful functions or data. Alternatively, we can just sell what we have like crazy. You might indicate which approach you think we should adopt.

We have reorle who could help set you more data on this subject if you want. Horefully the above will be useful, cause I think most of the issues are siven.

Since our office architecture is not based on the 8, I think we might also get the whole software group involved in this too. They no doubt have other reasons, including inability of files, operating systems and languages. Hopefully though we don't have to get them involved because they are driven and look as if they will produce a very good product on the 11. To me, we should adhere to an adage: If bodiers are in motion, they should remain in motion, particularly if they are going in the right direction.

Frankly, I think we are soins the risht way: produce and sell 8's, evolve it as long as it is competitive ... assuming it will make money and bring in the bread so like hell to make a really great, next generation product... apple III (with 128K memory) has the potential to be a very good wps, and just like Visicalc made the apple 2, WPS could make the apple 3. That's what I'd do if I were running apple (but mostly those guys are a lot smarter than I, so it will at least be that good.

Let me know if I can help prepare you for the board.

Thoughts on the dileas of increducing 3 PC/s, Particularis/and 3.

TECHNICALLY it's suicidal to continue with the S and do an accounts because the S addressing causes inherent complexits in what would be very simple programs. I can exclain this in 10 minutes and would like to because it's something all of us MUST understand. It's cloc the reason why the 11 bottoms out when compared with VAX or the 38,000. What the technical limits much are simple?

WE CAN NOT BUILD, LARGE, RELIABLE SOFTWARE ON THE 81 .THE COST TO BUILD SOFTWARE IS BUT OF SIGHT. WAS has added up in the neishborhood of 10 million for 100K instructions. I thick this could have been done in less work (due to complexity). This means the cost ver instruction is 100-200. \sim The cost to add new instructions is also prohibitive. 2 million for less than 10,000 instructions, or 200 per instruction. . The complexity also moans unreliability, hence not being able tur ${f 3}$ produce in volume. Note the problems and deap Kenfs syrrounding the প bld WPS 200 that we are still experiencing. Her vibrates on his own 100 there and its unreliability (and sharedness). This is simply a volume issue too. CSSE doesn't know how to cope with it. びな .Worst of all, we presram as slowly, the features makes us uncompetitive. No way can we track ISH who programs in PL/K and uses the 8086 for their stand alone WPS. 120 conton .There are a small supply of machine language programmers .The benchmarks say that you can set work dunc fuster on a Wandy independent of what we and cur secretaries say.

BUSINESS-WISE, it's suicidal to continue it in anothing but hoping it as a Word Processing terminal for shared eastem or a turewriter in the affice market. Large disks, all the other things mean more expense and loss for sestem. From all appearances, a WP Sestem secure to be regarded as a computer in that receive expect enhancements.

I don't see why we can't use the CAT and do sll the things the 2 would do and at the same cost. This would give us a good WPS base, buther than a flaky one. Of course, our long term strategy is a code that could run on CT and VAX. Maybe this could be extended to CAT since it's in a higher level isnauges, albeit our own.

EXTENDING THE 8 INTO THE SMALL BUSINESS MARKET IT PROBABLY EVEN MORE SUICIDAL I don't see any way to set the kind of software that the market says it wants without really coupling into the software publishing world. The CP/M ound may be a possibility, if the quality is there vis a vis interacting with the S.

For the newcomer, the 8 is not the beginning, just the beginning of the end als TRAX) A few customers could really sive as a black eve in the same way TRAX did. There will eventually be provotutions when all the limits get hit and all the cases get tried.

Bottom line We are on a slow, expensive, road to nowners. It ansone fullows us, they will be sorry (and very ansry with us), Subject: Possible Changes in Engineering Organization

To: Oper CC: Ed S	etion: Schein	s Committee	Date From Dept Loc.	: 15 FEB 77 : Gordon Bell : COD : ML12-1 Ext.: 2236
		Now		Possibility also Bern

The items I would like to discuss at the Bermuda Woods are as follows:

.What should the organization look like when we are a \$1B and \$2B company? More segmentation of businesses. Eng/Mut. / Mfg. together if practical. .How are your jobs changing? How are you changing to meet new challenges? Are you supporting each other through the changes? - Not effected ... ·Not... an tired yet. How are we to maintain integrated and in control with rapid growth? More formality / clear structures / processes + some top down direct. .A review of planned changes in OOD organization. (see attach mont) 3rd, Place (Conn. /RI/Me.) θV .A discussion of space alternatives. In N.H. Ladical or -.What should the characteristics of my replacement be? (eg. N.M. /Ariz./Aa. .1 propose that any product like not making 24% PLC only be allowed to grow 5-10% next year. New developing product lines, less than two years old, would be considered for exceptions. Would you prepare an outline of your concept of our organization at \$1B and \$2B and why you have chosen it by February 14th. I have asked Bill to collect and distribute to you as advance thoughts for our discussions. Some more concentration on marketing. - Specifier a Good GE Manager. + "Someone" has to have understanding/ Knowledge of Compters and Compter Business.

Ludon Bell

INTEROFFICE MEMORANDUM

TO: Operations Committee

Cc: Bill Thompson OOD DATE: March 2, 1977 FROM: Ken Olsen DEPT: Administration EXT: 2300 LOC/MAIL STOP:

SUBJ: CHANGES IN ENGINEERING

I would like to staff the Marketing Committee to supervise and run the budget of OOD. This means having a Marketing Vice President who, with a staff, not only supervises all marketing plans but supervises all engineering plans. Proposals for projects will come to the Marketing Committee through this Vice President for approval and will be reviewed each quarter.

Marketing then will be done by the Marketing Committee and not COD.

We should have an Executive Secretary or Administrator for OOD who is very senior, very strong and can run all the administrative activities.

OOD should be broken into four, five or six pieces, each with their own accounting, so that one group over-runs or under-runs and not the whole, large OOD.

From now on, Project Managers should coordinate between software and hardware so that COD is relieved of this chore.

There will be no meetings of OOD for six months to force the organization to delegate problems and to accomplish projects by organization.

All projects will then be run by the Marketing Committee with the Vice President of Marketing and no one person will have arbitrary power to turn on or turn off projects.

/d

March 2, 1977

Bill:

Ken would like the following three items put first on Monday's Operations Committee agenda, to run from 12 p.m. to 1 p.m., and would like only the "old" Operations Committee members to sit in on them.

1. Proposed Changes in OOD - Ken Olsen

2. Definition of Marketing VP - A.Knowles

 Proposal for Administrator for OOD - G. Bell

I thought maybe Ailine could set the food up in Gordon's office and the Oper. Comm. could grab their lunch and meet in the conference room while the others ate their lunch in Gordon's office -- just a suggestion.

Thanks,

Peggy

OPPORTUNITY TO:

- Permission

- . Improve interface and trust relationship with Product Lines.
- . Improve performance against schedule commitments.
- . Lower frustration among Gordon's Staff.
- . Improve focus on longer range, fundamental engineering strategy issues.
- . Improve attention to day-to-day operational and administrative requirements (e.g. the "SPACE" problem, budget surprises).

THE SOLUTION

Reorientation and restructuring of Engineering:

- 1. Full time senior manager for administration and operational issues: space allocation, budgeting, reporting and financial control, manpower planning and organizational development, operational control, program review, project review, schedule review, strategic planning.
- 2. Reduce meeting frequency so that operational details must be delegated to the line organizations and not (usually) worked at the staff level.
 - . Forced decoupling of individuals to minimize interaction problems
 - . Force Gordon's line managers to focus at a higher level
- 3. Refocus onto Corporate Engineering Strategy.
 - . Technologies and Advanced Development
 - . Longer term product and program (e.g., RAMP) strategies
 - . Raise long term/short term investment trade-offs for M/C
 - . Personnel review/management and organizational development

4. <u>Redistribution of responsibilities</u>.

- . Puffer head of planning, control, personnel and engineering services
- . Hire Senior Mass Storage direct report
- . Move printing terminals, power and packaging to Clayton
- Consider Demmer as direct report
 - . Consider low end/terminals direct report Constraints
- 5. Refined product planning/strategy setting process.
 - . Cleaner interface with product lines
 - . Better marrying of expectations and reality
 - . Community of interest between engineering and product lines
 - . <u>Documented</u> plans with visible control
- 6. Quickly implement improved systems for financial reporting and control
 - . Major program review
 - . Enhanced, simplified planning and funds flow processes
 - . Clear responsibilities for operational issues
- 7. Separate Bell Staff Focus into two parts:
 - . Operational Issues (the mundane and the practical) Delegate to the line except for issues which must be driven or focused at the highest level (under control of the new manager).
 - . Engineering Strategy Issues

Providing long term direction for growth and success of DEC's engineering activities, encompassing: strategy, direction, and organization.

Proposed**

COMPANY CONFIDENTIAL

OPERATIONS COMMITTEE Minutes of March 7, 1977

Attendees: Andy Knowles, Al Bertocchi, Gordon Bell, Win Hindle, Ken Olsen, Ted Johnson, Pete Kaufmann

Rotating Members: Jack Shields, George Chamberlain, Bill Hanson

Guests: Jack Gilmore, Bob Meese, Joe Meany, John Sims, Dan Infante, Jack Smith, George Silva

The minutes of the meeting of February 21, 1977 were accepted as written.

PROPOSED CHANGES TO OOD

(Both Sciles)

Ken is pushing the basic concept that Engineering can not accomplish the dual role of watching its own budget and planning. This means a major change in the Marketing Committee to accomplish this.

Gordon reviewed his proposal to change his organization. Ken disagreed. He wants no meetings— he does not trust them and wants to avoid insignificant hassles. Bob Puffer is now motivated to take the administrative job.

Ken asked if Gordon would run Puffer's responsibility in Engineering in the interim. The answer was yes. Dick Clayton's responsibility will also expand. Dick should be told that terminals might eventually be split out. This was not expected to be a problem. It was also noted that Dick had added solid management strengths in last six months.

Ken's concern is that nothing will change— 00D will just put up some window dressing. Pete felt we could go forward. The Operations Committee agreed provided Gordon does the following:

/-Add agreed to staffing of new guys -Each has a separate budget, i.e. clear turf -Eventually split mid-range and the low-end -Give Clayton and Portner the message that they should manage their own projects and place more emphasis on the future. -Personnel will report to Gordon

The Operations Committee approved the proposal based on the above conditions.

VICE PRESIDENT OF MARKETING

Ken then introduced the next subject, the Vice President of Marketing- not for decision but for discussion. Ken's goal is for the product lines and Engineering to propose, a Marketing Committee staff to do the preparation, and the Marketing Committee ultimately pass judgment. This means that the Marketing Committee actively decides on budget swaps, etc. Obviously, the

DIGITAL EQUIPMENT DUBROBATION

7

OPERATIONS COMMITTEE March 7, 1977

Page 2

Marketing Committee can not do without appropriate support if the work is to be done properly. He also wants to collect marketing plans— our marketing types are very inexperienced, therefore, we need better plans. This could be done by the vice president of marketing.

Ken is concerned about what the overlap with Corporate Planning might be. He worries that we limit the organization by titles. We need an organization to get things done. It will require many senior people.

Pete thought the issue was to define what you want to plan, then identify how it should be done.

• Win thought the issue was:

.Central place for short-range marketing plans held and reviewed .Interaction with product process (likes staff part, but uncomfortable with line)

- Ted felt we did have a process.
- Al felt Bill had developed a catalyst for planning— what was lacking was a strong review.
- e Ken wants Bill to continue on as secretary of the Marketing Committee and keep the process honest.
- Ken likes a line manager doing a review of the plans. Ted felt having Helmuth Coqui on board and working for Bill would solve this.

Ken was in a hurry last week, but with the OOD problem solved he is now willing to wait a few weeks.

Gordon wants Andy to concentrate on the low end.

VICE-PRESIDENT''S REVIEW

No vice president's concerns were raised.

ON-LINE SYSTEMS LETTER

Ken reviewed his concerns over the On-Line letter. His basic concern is whether we respond to these complaints properly.

Ted discussed his concerns and procedures that attempt to handle these problems. Win felt the key issue is the effectiveness of the account management program. He thought it was interesting that account managers were fundamentally new people.

Jack Shields felt we may need a system for returning calls that do not involve service outlays. Ted agreed. In addition, he is pushing for a review of large accounts.

INTEROFFICE MEMORANDUM

DATE: 10 June 1376 FROM: Bob Lander DEPT: Controller's Dept. EXT: 5051 LOC/MAIL STOP: PK3/F33

SUBJ: Organization of Engineering Department

Being aware that you are currently discussing organization changes, I want to offer for your consideration, how I view your world and a possible new structure.

Attached is a proposed organization chart and on subsequent pages are some of my thoughts on same.

If you want more discussion on this, I'll be pleased to meet with you.

/jmb attachments (2)

- 1. I believe a restructuring of responsibilities affecting Gordon Bell should be considered. He should be designated as being the Chief Consulting Engineer and all administrative duties should be placed in the hands of a new Executive Director of Engineering Operations. I suggest that the individual to fill that role is available in-house. That person should be represented on the Operations Committee.
- 2. The existing three engineering groups should be altered so that all "Product/Project" Managers would be pulled out and structured under a new Engineering Manager. I believe one of the weakest roles being performed in the company today is that of the Product Manager. The job definition is very foggy and some of the current individuals are torn between trying to be Product Managers, as well as, Engineering Managers.
- 3. The position of Finance and Administrative Manager is one that should be filled by Arnie Goldfein. I believe he has the capability to do that job as I have structured it. If your group organizes in a different way, then the job for Arnie Goldfein will have to be redefined.

BURNING ISSUES ENGINEERING RE-ORGANIZATION SHOULD ADDRESS

- 0. Interface to markets; interface to manufacturing.
- 1. Low end computer products.

-1-

- 2. Including, terminals as low end products.
- 3. System products versus collection of options that happen at random.
- 4. Better integration of hardware software.
- 5. Compatibility. Also 11/11; 10/11; nets
- 6. Reliability and producibility.
- 7. LSI--getting there.
- 8. Semiconductor memories phasing and opportunities for faster machines.
- 9. Product range-funding.
- 10. By structuring a particular way, will we build obsolete products according to organization--thereby missing opportunities.

G. Bell 2/7/74

PROPOSED PRODUCT GUIDANCE AND STRATEGY COMMITTEES

Components (options)

Ground Rules

-2-

- 1. Guidance for product planning and product management.
- Advisory--generally chaired by 1 or more responsible line manager for product(s).
- 3. Consists of Engineer, Mfg. (2x2), Service, Sales, and using Product Line customers.
- 4. Manager responsible for profit; 2 wide open 1/2, 1, or 2 day Woods Meetings; a 3 year plan which is a maximum of 5 1/2 months obsolete; and a short plan for yearly product review.

ORGANIZATIONAL AND TERRITORIAL ISSUES

-3-

- Packaging, power supplies, power distribution, shipping containers, environmental testing, metals engineering, design and mfg. of metals. Also, individual product group packaging. Strong central group with dotted line reporting to product, seems the way to go. We still can gain by more centrality. Less need to bend sheet metal is way to go.
- 2. Design automation. Central group (Vrablik) is beginning to function for PC boards, back panels, automatic insertion and data base. Splinters for Register Transfer simulation (programming), Logic Simulation (Gale), and Mask Generation (Gale-LSI).
- 3. LSI-Mfg.--Lemaire, Cudmore (Zeh-Amann), Teicher, Gale--doing lots on ad hoc basis, but really moving toward a strategy. Peters charter to do engineering; Lemaire to get chips and circuits.
- 4. Research. None with hardware building. Many groups prototype, almost all ideas get built. Little fundamental technology.
- 5. New products we are unable to identify now. Will this organization lock us in by structure and funding to miss new opportunities? Eg., scan graphics, voice response, OCR, desk calculators, computers packaged in terminals (smart terminals), floppy.
- 6. Terminals. Are these merely the form for our future low end computer packages? How do we sell them anyway? VT5-, VT5-Lab graphics, VT5-for typesetting, GT4-, (sell only: VT15, VT14, VT8), VT20 and VT20 follow-on, RT0-, RT90, CSS color, LA-. Issues: will new coordinating committee encourage/reduce overlap? How do we move to better products? Would some centrality allow us to hire a fundamentalist in human factors engineering, planning, and TV techniques? Is there any way to do it worse? We still only lose \$250K/year in miss-products.
- 7. Memory. Move to adopt combined Mfg., Engineering, and Testing as per Bell-Kaufmann suggestion to Operations Committee memo?
- 8. Manufacturing and its Engineering. Assembly line design. How much centrality? Can these plans be reviewed by engineers who must interface to them? Component group?
- 9. Process Engineering. How can we stimulate development in automation for:

Modules fabrication and testing FA&T Péripherals Power Supplies Memories

10. Synchronization with PDP-10. Customers for cabinets, power supplies, disks, terminals, tapes, software. Must interface to standards for networks and languages. What is interface to 11/85...would 10-land* kill it?

PROGRESS ON TOP-10 BOARD OF DIRECTOR'S PROBLEMS (published Aug. 1973)

- 1. ll-programming--substantial progress on compatibility.
- 2. LSI--no progress, need strategist-implementer.

-5-

- 3. Floppy--doing. Moving to manufacturing drive.
- 4. RP disks--Doing. Maybe shouldn't as it impacts engineering funding.
- 5. Networks and multiprocessors--nets OK. Multiprocessors not OK.
- 6. High level languages--commitment to use BLISS; FOCAL in some diagnostics.
- 7. Small and Large-Il's--are segmenting. Have started Il development moving.
- 8. 8's and 11's--should we support both? Yes, seems to be answer--is probably right answer.
- 9. Consoles, packaging--move to common scheme for low-end. Concern and staffing is occurring.
- 10. Terminal types--progress to adopt VTXY.
- 11. Manufacturing-Engineering Committee is helping. Pete is more aggressive to build engineering expertise.

NOTES/COMMENTS FOR OPERATING OBJECTIVES KEVIEN W/ LP + 6 B 4/3/80 MITCH KUR

I. IMPROVE FINANCIAL PLINNING, ANAL, FESTG, MEAS

1. NEW BURGET PROCESS - EBS II busbeen designed and released; the task free was keaded by Kan Nisbet. It significantly minorows EBSI by providing for cost center bridgeting (headcount and expenses by account), describe project budgeting, your levels of budgeting (two of which are "off-lime" simulation type budget provides), five your horizon, thistoric date, & lime mores (not pist finance people) con use it. Starting 4/8/80 for Fy SI - 85.

METRICS - Significant work has been done in gathing historic lata; but lach of resources in **L**. the control Fin group kept as from addill progress. Still need to meet with tolertal 000 members and implement -- a 'll prob slips from Q4 My SU to Q1 Fy SI.

REPORTS - Controllers deput was designed and <u>ය</u> , implemented as planned on schedule. Future effort needs to be directed at improving the report, making it more meaningful, and more timely.

4. PROD MG7 JURNON 7 a. Prod Fin Reporting - Stated drassing with Prodimons / woodford To collect positions, idens, needs. Expect a clearer goal set for this men by end of Q4 - cally Q1.

6. Even Cost GATH/ MON. TORING MOLEDURES - Patop arch. project Abore (#5). Part of me cabon reputy mobile.

_.

II. Communicate/EDUCATE LINE MORS CONTROL + FIN, ROLE/RESI. ON

1. DASIC FIN MODEL - It's done, but in pieces, not really pulled togethie in one model. We've communicated via various invitations to staff mitys + 000 --- The 3/16 000 Direct Reported Dumine mity, Ken to Fuller staff 4/1, Ken to Haber's woods mity 3/28, etc. Kur + stop will pat together a conjudence strategy statement for the current beinge book proces -- we'll use graphic models if they make Sense.

2. ENG. FIN WORKSOOPS - Two were held in Spring of 1779 - - with signif. Personal Support. Wanted two more this year -- Out pers. Support & drive not there. Will putly Spret with copper sessions for small groups buitting finance & continued presentations at other (OOD's/line mgrs) staff mitgs.

ENGINEERING FINANCE

1.

GOALS/PLANS/PROJECTS FOR FY'80

Priorities: (H) High

- A. Content, Objectives, Responsibilities
 - 1. Improve the professional strength of the Engineering Finance organization.
 - a. Plan and provide for financial career growth and promotional opportunities for high performers. Kur & Staff (H)
- (A)
- b. Hire highly competent people. Kur & Staff (H)
- (\mathcal{R})
- Provide for and encourage participation in development programs, both inside and outside the company. Kur & Staff (H)
- 2. Improve financial planning, analysis, forecasting, and measurement capabilities.
- (A) * a
- <u>New Budget Process</u> Design and implement a revised discrete project budgeting system which has at least a two-year focus and a specific approval process. (Started in FY'79). Resp.: Ken Nisbet, plus task force. (H)
- Metrics Develop metrics (including cc, project, manpower, space, capital, etc.) for both development groups and key service groups. Resp.: Jim Chiafery (Central), all F/M's (own areas). (H)
- c. Control FY'80 The prime objective for FY'80 will be to insure that Central Engineering stays in control -- first, that it does not exceed its expense and capital budget, but with the caveat that potential problems of budget vs. schedule vs. project content are identified and exposed in advance by financial personnel, so that the appropriate total business tradeoffs may be made by line management at the "right" level in the corporation. Implicit is timely and accurate forecasting. Resp.: all. (H)
- ───>* d.

Product Management Support - A P/M support F/A is needed in Large Systems. This financial team will work with a Process/Systems Specialist to improve and/or redesign the Product Financial Statements, develop product investment metrics, along with an increasing role in investment analysis and development of corporate new product introduction financial evaluations. Resp.: Curt Rawley, F/M's, PMSF/A's. (H)

c.
- Engineering Business Systems Architecture Replace Curt Rawley in order to continue this longer range business systems development activity; combine with Product Financial Statement Systems project. Resp.: M. Kur. (H)
- f.
- Engineering Finance Metrics Analyze collected data and organize into a cohesive formal package for ongoing measurement and review. Resp.: M.`Kur, Jim Chiafery. (H)
 - Tool Development Provide investment analysis g. for tool development in EIS and Technology group. Resp.: Alan Silver and Mike Jean/Bruce Green.
 - Improve Reporting Tools for F/A's Engineering h. assume responsibility for labor processing and cost center reporting, improved budgeting and discrete project reporting. Resp.: Jim Chiafery.
 - Strategic Planning Improve/Strengthen the coupling i. between strategic planning and finance. Resp.: M. Kur, F/M's.

Do the "basics" better. 3.

- "Simplification" Design and implementation of a. changes in accounting within the Simplification philosophy will be accomplished in FY'80 and FY'81. Included will be an analysis of current accounting/ financial practices in each OOD member's organization AS ORICE WALLT and recommendations for improvement. Included will be reporting by OOD member on both project spending and "incurred" spending. An initial time-phased plan has been proposed. Resp.: Jim Chiafery, plus task force. (H)

PROTOIED.

DON'T ul

is. Milli

- Large Systems Development Fully integrate Large b. Systems (financially) into Central Engineering. Resp.: Dick Leslie. (H)
- Engineering Accounting/Finance Procedures Document these in a simple, easy-to-read, manual. Resp.: Jim Chiafery.
- Audit of "Basics" Provide for ongoing audit of d. travel expenses, employee receivables, overtime, first class air travel, and other "basic" financial areas requiring particular discipline within Central Engineering. Resp.: Jim Chiafery.
- M098 System Refine to minimize inter-plant recone. ciliations and provide accurate ECO history; resolve any loose audit issues. Resp.: Ken Hisbet.

Ct)

Decentralized Engineering Accounting — An analysis (and justification, if justified) of the benefits of decentralization (Engineering ledger) - and/or of other alternatives -- is required before any major decisions and resourcesexpenditures (not budgeted in FY'80) are made toward an Engineering ledger. Continue implementing remote site accounting and reporting in Colorado, Phoenix, Marlboro, and Hudson. Resp.: Jim Chiafery.

g. <u>Finance Budget</u> - Accomplish FY'80 goals within a total cc322 budget increase of 15% over FY'79.

 Educate line managers relative to their "control" responsibilities vs. the controller's role -- as described in the Corporate Controller's Staff Goals.

Directly participate on OOD. M. Kur (H)

b. Continue Engineering Finance workshops (started in FY'79) for Engineering Line Managers, Supervisors, and other key people. Kur & Staff.

Communicate to all levels of management and keep them informed about Engineering Finance Charter and Engineering Finance organization structure. Kur & Staff.

 Highest FY'80 priority goals, as established with Bill Thompson and Larry Portner.

M.C. Kur 2/16/79

CENTRAL ENGINEERING FINANCE CHARTER

BASIC CHARTER STATEMENT: The Central Engineering Finance function is the financial business partner of Engineering Operating Managers and Product Managers, and is responsible

- to provide financial planning, analysis, audit, and control for Engineering operating units, for Engineering programs/projects, and for the support of product business plans and new product justification;
- to assist engineering Management in the financial evaluation of alternatives;
- to provide tools and analysis for assessing tradeoffs between budget, schedule, and functionality of development projects;
- to develop, support, and/or manage related administrative and financial business sytems and functions;
- to insure integration and coupling between Central Engineering and corporate financial objectives and plans; and
- to develop the financial team to support Engineering operating units.

MAJOR RESPONSIBILITIES:

- A. FINANCIAL SUPPORT, PLANNING, AND CONTROL ENGINEERING OPERATING UNITS
 - Develop Central Engineering Operating budgets and capital budgets, including appropriate control reports.
 - 2. Insure integration between corporate budgets and Central Engineering budgets.
 - 3. Coordinate with Central Engineering's strategic planning group in the quantitative evaluation of alternative strategies and in the structured presentation of quantitative data as part of the strategic plan.
 - 4. Install and maintain systems to control actual expenses to plan, at project level, at cost center level, and at higher roll-up levels for both.

- 5. Identify problems in advance, and force resolution wherever necessary (at OOD and within corporation).
- 6. Be a part of the management team at each level, and be judged on the execution of the team's plan.
- 7. Provide financial training for non-financial Engineering personnel.
- 8. Develop measurements and metrics for evaluating Engineering operations.
- 9. Develop an improved budget system, to cover a minimum of two full fiscal years.
- B. FINANCIAL SUPPORT, PLANNING, AND CONTROL PRODUCT MANAGEMENT
 - Document the financial section of business plans, in conjunction with and approval of product manager(s).
 - Develop tools and provide resources to financially evaluate product and business plan alternatives, and to justify specific proposed new products.
 - 3. Assist Product Manager in providing new product introduction cost evaluations for the corporation.
 - 4. Develop and provide meaningful reports for measuring financial performance by product.

C. ADMINISTRATIVE SYSTEMS

E

- 1. Assist, as required, in space planning activities.
- 2. Support Engineering operating management and Personnel Department in manpower planning and forecasting, and develop controls for assuring accomplishment of plan and its integration with budgets.
- Obtain (from other corporate sources) or provide selective analysis of competition (as agreed upon with Engineering Operating Managers and/or product managers).

D. RESPONSIBILITIES RELATIVE TO TOTAL CORPORATION

- 1. Insure Central Engineering financial plans are integrated with corporate financial plans.
- 2. Provide a system for allocating Engineering expenses to the Product Lines.

- 3. Provide input, support, and active participation in the development of corporate planning and financial processes (e.g. Simplification, new financial Redbook, overall budget process, accounting change task force, financial training courses, etc.).
- 4. Develop and implement a decentralization program for Central Engineering, in conjunction with corporate decentralization activity.
- 5. Protect those corporate assets under the responsibility of Central Engineering.

E. DEVELOPMENT OF THE FINANCE TEAM

- 1. Provide for training and continued educational development of financial personnel.
- 2. Insure high financial and interpersonal competence of new personnel.
- 3. Provide for continuous feedback to personnel of performance and development needs.
- 4. Institute a career development program providing for growth both within Engineering Finance and with other finance organizations within DEC.

- f. <u>Engineering Finance Metrics</u> Analyze collected data and organize into a cohesive formal package for ongoing measurement and review. Resp.: M. Kur, Jim Chiafery. (H)
- g. <u>Tool Development</u> Provide investment analysis for tool development in EIS and Technology group. Resp.: Alan Silver and Mike Jean/Bruce Green.
- h. <u>Improve Reporting Tools for F/A's</u> Engineering assume responsibility for labor processing and cost center reporting, improved budgeting and discrete project reporting. Resp.: Jim Chiafery.
- Strategic Planning Improve/Strengthen the coupling between strategic planning and finance. Resp.: M. Kur, F/M's.
- 3. Do the "basics" better.
 - a. <u>"Simplification"</u> Design and implementation of changes in accounting within the Simplification philosophy will be accomplished in FY'80 and FY'81. Included will be an analysis of current accounting/ financial practices in each OOD member's organization and recommendations for improvement. Included will be reporting by OOD member on both <u>project</u> spending and "incurred" spending. An initial time-phased plan has been proposed. Resp.: Jim Chiafery, plus task force. (H)
 - b. <u>Large Systems Development</u> Fully integrate Large Systems (financially) into Central Engineering. Resp.: Dick Leslie. (H)
 - c. Engineering Accounting/Finance Procedures Document these in a simple, easy-to-read, manual. Resp.: Jim Chiafery.
 - d. <u>Audit of "Basics" Provide for engoing audit of</u> travel expenses, employee receivables, overtime, first class air travel, and other "basic" financial areas requiring particular discipline within Central Engineering. Resp.: Jim Chiafery.
 - e. <u>M098 System</u> Refine to minimize inter-plant reconciliations and provide accurate ECO history; resolve any loose audit issues. Resp.: Ken Nisbet.

* f. <u>Decentralized Engineering Accounting</u> - An analysis (and justification, if justified) of the benefits of decentralization (Engineering ledger) - and/or of other alternatives -- is required before any major decisions and resourcesexpenditures (not budgeted in FY'80) are made toward an Engineering ledger. Continue implementing remote site accounting and reporting in Colorado, Phoenix, Marlboro, and Hudson. Resp.: Jim Chiafery.

- g. <u>Finance Budget</u> Accomplish FY'80 goals within a total cc322 budget increase of 15% over FY'79.
- 4. Educate line managers relative to their "control" responsibilities vs. the controller's role -- as described in the Corporate Controller's Staff Goals.
 - a. Directly participate on OOD. M. Kur (H)
 - b. Continue Engineering Finance workshops (started in FY'79) for Engineering Line Managers, Supervisors, and other key people. Kur & Staff.
 - c. Communicate to all levels of management and keep them informed about Engineering Finance Charter and Engineering Finance organization structure. Kur & Staff.

* Highest FY'80 priority goals, as established with Bill Thompson and Larry Portner.

SUBJECT: OBJECTIVES & GOALS FOR 4/16 MEETING >3

e de la companya de l

SL1/S2/2

OBJECTIVES/STATUS FROM 10/25/79

OBJECTIVES.

- 1. Define and implement EBOD process
 - Definition of the entire process is still not done.
 - Some time and thoughts were lost in Andy to Bill transition.
 - Have tentative bus-in from Bill on SPU, strategy planning, EBOD calendar
 - SPU's up and running, but need calendar and more definitive statement of role from Bill, Larry and self
- Establish appropriate Product Management Job descriptions and levels.
 - Job descriptions and levels complete
 - Used in February/March salary planning
 - Awaiting Corporate approval
- 3. Establish working relationship with marketing and other functions.
 - Monthly systems meetings running since November 1
 - Product Management supporting PPC short term requests
 - Formal communication links need to be established
- Establish an integrated long range planning cycle that couples systems/product markets and budget.
 - Starting point, integrated strategy and base plan content finished by April 10. Formatting, presentation and COD review underway
 - Link between SPU's, EBOD, Product Line long range plans still has to be defined

- ECO process has yet to be established.
- 5. Develor systems business plans
 - Starting point, experiment with linking product line demand forecasts with long range product plans -Orange book 3/80
 - Systems still needs OOD definition
- Help specify MIS needs.
 - 2 field trips
 - Specifications need to be senerated
 - Participated in design of color books and processes

In addition to working the issues associated with the above objectives, the following items have, or are being, completed.

- Non disclosure package for systems and products for the Product Lines as requested by the Marketing Committee.
- Start of Phase In/Phase Out Product Task Force as requested by Win.
- Completion of Cost of Ownership Task Force as requested by Operations Committee.
- Word Processing transition issues.
 - Preliminary work associated with budgeting products and staff with Stan
 - Jack Gilmore transition into Central Engineering
 - Start of OFIS product plan
 - Fire fight field issues
- 5. Provide moral support and direction through one on ones with Bob Dockser and Jim Barbour.
- Involved with the sell of Systems Management within COD including starting systems management task force.
- Participate in sales situations with Raytheon, Boeins, Aires Ltd. and MacDonald Douglas.
- 8. Participated in U.S. resional and district managers cales meetings.
- 9. Worked funding issues for a number of items including special issues of sales update, IAS, handbooks, DEC 10/20 promotion.

- 2 -

Current Objectives

م در

Strategic Planning

- Get present document through product line and EBOD approval cycle - June 3, 1980
- Use present strategic plans document as base and define process using SPU's and product line long range plans to synchronize market and product strategic plans - June 3, 1980.
- Define content and format for Redbook July

Product Planning

- Get present base plan through product line and EBOD approval cycle - June 3, 1980.
- Put control process in place to keep base plan up to date and trisser project/product/program reviews - June 3, 1980
- Define Phase O offical review process similar to PPC -July 1980
- Define business plan format associated with type of product and phase - July 1980
- Provide product planning guide to long range planning process - August 1980
- Review each major product/program at PMC on a 5 year basis for implementation of strategy, customer needs, and competitiveness

Marketing

- Improve ensingering/product management/PPC interaction
- Define time-table and methods of implementing PPC announcement criteria - August 1980
- Participate in product group managers meeting on a regular basis

Systems Management

- Work definitive issues across OOD
- Run Systems Management Task Force
- Implement PPC systems pricing announcement criteria
- Continue Oranse book
- Work Phase In/Phase Out product issues as chairman of

CHARTER

The role of the Systems Manager in the Product Marketing organization is to develop system plans and to see that they are implemented by all functional organizations. The planning shall include inputs from the marketing groups, corporate marketing, and engineering and will be focused on the saleability, cost of ownership, and gross profit of the system.

The role of the Product Manager in the Product Marketing organization is to develop product plans which meet the requirements of the system plans and market plans, if the product is to be sold as a stand-alone product. The product plans will meet the same criteria as the system plans.

The Systems and Product Managers will be part of a line product marketing organization and shall also report to the appropriate engineering manager to assure technology coupling and managing the engineering interface with the other functional departments.

THE JOB

The jobs within product management are undergoing a transition to become much more marketing oriented with an emphasis on external factors such as competition, market opportunities, and customer cost of ownership. The jobs will also take on an increased responsibility for measuring and taking steps for improving the profit of each product (system).

Jobs within product marketing will be developed to lead to promotion within product marketing as well as promotion to senior jobs in other functions, particularly marketing groups.

FUNCTIONS

Planning

Product marketing is responsible to maintain a formal four step planning process for all systems and products.

· -

The four steps are:

- a) <u>Market opportunities</u> reviewed by Product Marketing Committee (PMC) and the marketing groups (M/G).
- b) <u>Strategic market plan</u> reviewed by PMC and the engineering board of directors (EBOD).
- c) <u>System/product business plan</u> reviewed by PMC, Office of Development (OOD), M/G and EBOD.
- d) Implementation plan reviewed by PMC and OOD.

Processes

Product marketing is responsible for the processes needed to handle a product (system) from the business planning stage through to announcement. This includes the interfacing between all functional groups.

The EBOD process is used to review strategic direction and set major budget goals.

The Program Review process is used to coordinate the business plans of the groups with the status of the program.

Marketing

Product marketing is responsible for the development of the following items to simplify the selling of all products.

- a) Simplified data sheet and price lists
- b) Product positioning statement
- c) Market focus (by market and/or strategic market groups)
- d) Competitive analysis
- e) Pricing proposal
- f) Announcement plan

Financial

Product marketing is responsible for the review of all systems and products to determine financial impact and cost of ownership with particular emphasis on gross margin, start-up expenses, profit and yields. Investment decisions are to be based on financial models which include profit and cash flow analysis.

GOALS

- 1. Develop a product/system marketing team that is focused on the specification of needs, and all facets that affect the profitability of the product/system during its total life.
- 2. Develop where necessary and continue to improve existing processes for
 - a) "contracts" and forecasting with marketing groups,
 - b) co-ordination of central engineering strategy, and
 - c) management of engineering role in EBOD.

- 3. Develop where necessary and continue to improve existing process for system strategies and plans that
 - a) account for the sales/marketing environment and expected changes within that space during the life of the system,
 - b) position each system within DEC's total offering, and
 - c) include field service and manufacturing input at the start of each project, within context of systems family.
- 4. Develop a set of product strategies
 - a) products will be categorized an sold as stand-alone or sold as part of system and/or stand-alone,
 - b) the product strategies for stand-alone products will be the same as 3a to 3c, and
 - c) products sold as only part of system will be governed by system strategy.
- 5. Make systems and products easier to sell by developing
 - a) easy to use systems price lists,
 - b) Data Sheet Product Notebook, and
 - c) a co-ordinated literature plan.
- 6. Reduce the cost of ownership by
 - a) reducing the number of different components in products,
 - b) designing field service and manufacturing needs into the product,
 - c) developing a total plan for the entire life of a product/system and
 - d) planning mid-life kickers at the outset of a project.
- 7. Increase gross margin by
 - a) developing pricing plans for the life of product,
 - b) reducing start-up and on-going support costs, and
 - c) making necessary financial trade offs across all factors affecting the cost of goods sold.
- 8. Measure the P & L and cash flows of all systems and stand-alone products over th entire life of the product system.

SML-10/2/79 /mlum

SHORT TERM OBJECTIVES -

- 1. Define and implement EBOD process.
 - a) Definition
 - conceptual scheme approval October 29
 - flow chart process November 8
 - review process OOD November 15
 - b) Implementation
 - select procedure (Harvard 10 Step) November 16
 - start to establish SPU's PMC November 22

2. Establish appropriate Product Management Job Descriptions and levels.

- a) Determine number of levels October 11
- b) Prepare Job Descriptions October 31
- c) Personnel review (Don Ames) November 15
- d) Review at OOD (John Meyer) November 30
- e) Corporate approval December 30
- f) Adjust Managers classification January 15
- g) General Announcement January 30
- h) Define role of systems/product managers November 30
- Integrate systems/product managers role with systems/program managers December 31.
- 3. Establish working relationship with marketing and other functions.
 - a) Define a working forum October 20
 - b) Set-up and run monthly corporate meeting first one November 1
 - c) Deal with short term issues raised by PPC review process needs October 29 design process implementation process December 31

SML:10/24-25/79

 Establish an integrated long range planning cycle that couples systems/ product markets and budgets.

- a) Review present planning commitments October 18
- b) Review staffing impact October 25
- c) Establish SPU's start November 22
- d) Determine 5 year revenues by
 - service/equipment
 - architecture 5 types
 - functionality December 4
- e) Determine method of reviewing revenue impacts coupled to P/L forecasts. November 30.
- 5. Develop systems business plans.
 - a) Select a product to be used to establish a complete system business plan November 30
 - b) Develop cursory system plan December 30
 - c) Test systems contract with P/L's January 30
 - d) Develop full system plan. March 1
 - e) Enter into contracts with all functions. May
 - f) Expand to other systems.
 - g) Select 1 product to test impact model. December 31
 - h) Establish planning goals and staff. December 31
 - i) Target total integrated plans. June 30
 - J. Prepare redbook to present forecast. February 1.

6. Help specify MIS needs.

- a) Review external approaches. Bruce, Mitch November 30
- b) Produce statement of needs December 15

V 26 1979 SML:10/24-25/79

CENTRAL ENGINEERING PERSONNEL CHARTER

<u>MISSION_STATEMENT</u> - To participate with management and employees, both as a direct contributor and as a consulting resource, in creating an environment which promotes innovation, Affirmative Action and assures effective utilization of individual and organizational resources in conjunction with Corporate philosophy, goals, and objectives.

Personnel will provide capabilities which enable Central Engineering to:

- Provide strategies and plans for attracting, retaining and developing a competent workforce.
- e Establish a linkage between organization requirements and individual needs.
- Monitor the impact of decisions and conditions on organizational effectiveness and employee morale.
- Develop programs and processes which provide for effective communication among employees.
- Treat employees fairly and in a manner consistent with Company policies.
- o Conform with logal requirements.
- Develop, support and manage related administrative and personnel programs, systems and tools
- o Influence, participate with, and insure integration of Central Engineering and Corporate Personnel objectives and plans.

J. Meyer June/79 MS 22

J. Meyer 9/10/79

PERSONNEL GOALS

- 1. Provide day to day Personnel Services to employees.
 - a Employee Relations/Communications
 - b Salary/Benefits Administration
 - c Training and Development Support
 - d Administration/Monitoring of EEO/AAP
 - e Employee Activities
 - f Community Relations
 - g Policy interpretation and administration
 - h Health Services
 - j Special projects needed by individual organizations
- 2. Provide program management in Human Resource Planning and Development to enable Central Engineering to understand and meet its technical and managerial staffing needs 3-5 years out. In so doing, help the organization accomplish the Product Strategy and help individual employees satisfy their career needs.
- 3. Provide organization development to line managers, technical contributors, and personnel staff as they work to achieve business and "people" goals. Provide a strategic focus on key areas such as organization climate, group interfaces, management systems and engineering processes.
- 4. Provide the proper supply of qualified candidates to meet the staffing requirements of Central Engineering.
- 5. Create and maintain management awareness of Compensation/Benefits programs; how they are developed; how they are utilized within their respective organization; how effective they are and how to bring about program changes.
- 5. Develop and maintain an effective Employee Information System.
- 7. Collaborate with and support Corporate Personnel and other DEC Personnel Departments.
- 8. Provide a competent Personnel Department that is capable of supporting the Engineering group.

MS043

PERSONNEL GOALS and FY'80 OPERATING DEJECTIVE SUMMARY

(Detail on individual department plans)

1. Provide day-to-day Personnel Services to employees.

A Employee Relations/Communications

Provide an environment whereby line managers and supervisors develop an increasing evnership for employee relations.

Insure that administrative systems and procedures are designed in such a way that local supervisory responsibility and control is fostered.

Begin to initiate a change in Personnel's role from problem solving to consulting: Analyze and review:

1) those functions which are performed by supervisors and managers

2) those functions performed by Reps which should be performed by supervisors and managers

3) those functions which should be performed by Reps.

Insure formal and informal sensing techniques are in place within the groups. Continue installation of group meetings where management and subordinates come together to talk.

Update the Tewksbury Employee Handbook. Modify and enhance orientation program.

Assist internal movement of employees within Central Engineering and DEC.

Consultant/Senior Consultant job descriptions, qualifications and Review Process.

Begin development of an assimilation program for new employees: Develop task force; Design Program; Implement Phase 1 and Evaluate.

Towksbury Sensing Process: Design; Initial implementation; Modify design and Second implementation.

Continue meetings of new hires and group managers.

Invite and coordinate participation of employees on issues relating to SFR and Hudson moves.

B Salary/Fenefite Administration

Conduct and/or have conducted at least one supervisory training session on Compensation at each Engineering location.

Revise current equal pay audit procedure; continue audits under revised procedure.

Design communications network among supervisors, employees and personnel group to aid in program development and implementation.

Continuation of Phase II of management job slotting project.

Review and/or write job descriptions within Engineering job families.

Special study of product/program management job family.

Exception spending, planning, implementation, program monitoring.

Exempt pay program administration: program monitoring, assessment of effectiveness, propose modification, implementation of next years program.

Non-exempt pay program analysis: Program monitoring, assessment of effectiveness, propose modifications, implementation of next years program.

Technician study: job descriptions/evaluation/structure analysis and revision as needed.

C Training and Development Support

Provide supervisory training modules on: Compensation, EEO/AA, Interviewing skills, Continue Discipline Documentation, and Finance Training programs. Evaluate M.T.O.

Communicate Technical courses/catalogs on-site.

Develop and implement programs to educate all users to their role in the S & P process which will gain more effectiveness and efficiency. Some examples of these programs are: Interviewing skills workshops; "State of the Marketplace" communications; and "How the administrative system works."

Definition of H.R.P. & D. Dept. training responsibilities.

D Administration/Monitoring of EEO/AAP

Review organization EEO/AA goals with OOD Staffs.

Develop and implement proactive Affirmative Action sourcing programs to help increase our representation of minorities and women in the C.E. organization.

Continue Male/Fcmale Workshops where applicable.

E Employee Activities

Maintain present programs.

F Community Relations

Continue developing and understanding our responsibilities for this activity - primarily at Tewksbury and Spitbrook.

<u>**G**</u> Policy interpretation and administration

Participate in formulating policies across Engineering and DEC.

H Health Services

Investigate and propose an Employee Assistance program at Tewksbury. Monitor installation of Health Services Unit at Spitbrook Rd.; hire nurse to operate.

Continue involvement with Mill Health Services Unit.

J <u>Special projects needed by individual organizations</u>

Participate in Hudson and Spitbrook Road facility development and moves.

Participate in the redesign of the Engineering Review Board and ensure consistency across DEC and Engineering.

2. Provide program menagement in Human Resource Planning and Development to enable Central Engineering to understand and meet its technical and managerial staffing needs 3-5 years out. In so doing, help the organization accomplish the Product Strategy and help individual employees satisfy their career needs.

Define and begin installation of a Human Resource Planning and Development Program across Central Engineering.

Develop an HRPLD Program Plan (3-5 years)

Develop and initiate a process to understand and review C.E. technical and management needs 3-5 years out.

Propose on FY'81 plan and budget for H.R.P.

Develop and install a process for development planning and review for 00D members and their direct reports.

Continue the improvement of the Human Resource Process within COD.

Improve content and purpose of the Human Resource Spring Woods

Improve quality content of salary reviews.

Begin Performance review program in SSD.

Establish quarterly review process for staff's direct reports and their direct reports.

Begin (1) level down development review for: Software, Tech. Director, Group level Software.

Definition of H.R.P.&D Dept. training responsibilities.

3. Provide organization development line managers, technical contributors, and personnel staff as they work to achieve business and "people" goals. Provide a strategic focus on key areas such as organization climate, group interfaces, management systems and engineering processes.

Continue the integration of key groups into/with other organizations ie:

Formally identify Steils' and Glorioso's staff with respective Engineering Development groups.

Support project manpower flow between MSD groups (Adv. Dev., Prod. Dev., S.W. and Hydra)

Develop Terminals organization plan and communicate integration of Printer and Video.

Assist in defining charters and relationships between SSD and LSI group.

Establish an on-going consing program to test the environment and to give data to management. Tewksbury is being used as test site.

<u>4. Provide the proper supply of qualified candidates</u> to meet the staffing requirements of Central Engineering.

Establish an effective Internal Transfer process. .

Develop, implement and monitor consistent administrative systems and metrics for the C.E. Staffing and Placement Organization.

• Develop and administer the College Relations and College Recruiting Programs.

Develop and implement programs to educate all users to their role in the S&P process which will gain more effectiveness and efficiency. Some examples of these programs are: Interviewing skills workshops; "State of the Marketplace: communications; and "How the administrative system works."

> later og vær reliken 🔐 som avande for livelinnen ekonstruktionelike til kanster særinnen særin under særinnen som ekonstruktionelike so Ekonstruktionelike som ekonstruktionelike som ekonstruktionelike som ekonstruktionelike som ekonstruktionelike s

Develop and implement proactive Affirmative Action sourcing programs to help increase our representation of minorities and women in C.E. organization.

H.R. planning process to understand C.E. technical and managerial needs 3-5 years out: Design, Implement, Review results.

5. Create and maintain management awareness of Compensation/Benefits programs:

How they are developed

How they are utilized within their respective organization

How effective they are

How to bring about program changes

Conduct and/or have conducted training in Comp/Ben at various locations.

Design communications network to aid in development and implementation of Comp/Ben programs.

Establish a company visit program with 12-14 companies to talk about engineering and engineering related jobs. Visit 2-3 companies per quarter.

6. Develop and maintain an effective Employee Information System.

Personnel Information System:

Conduct C.E. needs analysis Scope out system specifications Develop maximum utilization of System 1022 Augment Corporate programs with compatible Engineering programs. Continue and expand use of Personnel Activity Reports.

7. Collaborate with and support Corporate Personnel and other DEC Personnel Departments.

Manage the Staffing and Placement Function across Central Engieering while integrating into Corporate Programs and Goals.

Scope managment positions: Continuation of managemenet slotting project.

Personnel Training program for DEC personnel department.

Individual development plans for OOD members.

• • •.

Corporate O.D. Thrust: Consulting group; Functional O.D. Mgrs.; Al Fitz.

Provide a competent Personnel Department that is capable of supporting the Engineering group.

Re fully staffed.

Develop and review with management site department plans for Hudson and Spitbrook Rd.

Department management:

What are we going to do for ourselves?

How are we going to review goals and objectives?

What is our management process?

Consulting skills training to C.E. professional Personnel staff.

MS045

•

CENTRAL ENGINEERING PERSONNEL DEPARTMENT OPERATING OBJECTIVES - FY'80

1. Human Resource Planning

	Objective	Completion Date
	HRP&D Program Plan	•

OPERATING OFJECTIVES WHICH ARE COMMON ACROSS THE CENTRAL ENGINEERING ORGANIZATION

1. Human Resource Planning

mso47

- 2. College Recruiting and Relations
- 3. Spitbrock Road and Hudson facility plans
- 4. Spitbrook Road and Hudson employee moves
- 5. Assimilation Program for new Engineering employees
- 6. Help managers understand and execute personnel responsiblities

PERSONNEL GOALS and EY'SO OPERATING OBJECTIVE SUMMARY

(Detail on individual department plans)

1. Provide dev-to-day Personnel Services to employees.

A Employee Relations/Communications

Provide an environment whereby line managers and supervisors develop an increasing ownership for employee relations.

Insure that administrative systems and procedures are designed in such a way that local supervisory responsibility and control is fostered.

Eegin to initiate a change in Personnel's role from problem solving to consulting: Analyze and review:

1) those functions which are performed by supervisors and managers

2) those functions performed by Reps which should be performed by supervisors and managers

3) those functions which should be performed by Reps.

Insure formal and informal sensing techniques are in place within the groups. Continue installation of group meetings where management and subordinates come together to talk.

Update the Tewksbury Employee Handbook. Hodify and enhance orientation program.

Assist internal movement of employees within Central Engineering and DEC.

Consultant/Senior Consultant job descriptions, qualifications and Review Process.

Begin development of an assimilation program for new employees: Develop task force; Design Program; Implement Phase I and Evaluate.

Tewksbury Sensing Process: Design; Initial implementation; Modify design and Second implementation.

and the second and the second and the second sec

Continue meetings of new hires and group managers.

STRANTED AND DESCRIPTION OF A CONTRACT OF

Invite and coordinate participation of employees on issues relating to SFR and Hudson moves.

R Salary/Renefita Administration

Conduct and/or have conducted at least one supervisory training session on Compensation at each Engineering Location.

Revise current equal pay audit procedure; continue audits under revised procedure.

Design communications network among supervisors, employees and personnel group to aid in program development and implementation.

Continuation of Phase II of management job slotting project.

Review and/or write job descriptions within Engineering job families.

Special study of product/program management job family.

Exception spending, planning, implementation, program monitoring.

Exempt pay program administration: program monitoring, assessment of effectiveness, propose modification, implementation of next years program.

Non-exempt pay program analysis: Program monitoring, assessment of effectiveness, propose modifications, implementation of next years program.

Technician study: job descriptions/evaluation/structure analysis and revision as needed.

C Training and Development Support

Provide supervisory training modules on: Compensation, EEO/AA, Interviewing skills, Continue Discipline Documentation, and Finance Training programs. Evaluate M.T.C.

Communicate Technical courses/catalogs on-site.

Develop and implement programs to educate all users to their role in the S & P process which will gain more effectiveness and efficiency. Some examples of these programs are: Interviewing skills workshops; "State of the Marketplace" communications; and "How the administrative system works."

Definition of H.R.P. & D. Dept. training responsibilities.

D Administration/Monitoring of EEC/MAP

Review organization EEO/AA goals with COD Staffs.

Develop and implement productive Affirmative Action sourcing programs to help increase our representation of minorities and women in the J.E. organization.

Continue Male/Female Workshops where applicable.
E Employee Activities

Maintain present programs.

F Community Relations

Continue developing and understanding our responsibilities for this activity - primarily at Tewksbury and Spitbrook.

C Policy interpretation and administration

Participate in formulating policies across Engineering and DEC.

R Health Services

Investigate and propose an Employee Assistance program at Tewksbury. Monitor installation of Health Services Unit at Spitbrook Rd.; hire nurse to operate.

Continue involvement with Mill Health Services Unit.

J Special projects needed by individual organizations

Participate in Hudson and Spitbrook Road facility development and moves.

Participate in the redesign of the Engineering Review Board and ensure consistency across DEC and Engineering.

2. Provide program management in Human Resource Planning and Development to enable Contral Engineering to understand and meet its technical and managerial staffing needs 3-5 years out. In so doing, help the organization accomplish the Product Strategy and help individual employees satisfy their career needs.

Define and begin installation of a Human Resource Planning and Development Program across Central Engineering.

Develop an HRP&D Program Plan (3-5 years)

Develop and initiate a process to understand and review C.E. technical and management needs 3-5 years out.

Propose an FY'S1 plan and budget for H.R.P.

Develop and install a process for development planning and review for OOD members and their direct reports. Continue the improvement of the Human Resource Process within CSD.

Improve content and purpose of the Human Resource Spring Woods

Improve quality content of salary reviews.

Ecgin Performance review program in SSD.

Establish quarterly review process for staff's direct reports and their direct reports.

Regin (1) level down development review for: Software, Tech. Director, Group level Software.

Definition of H.R.P.&D Dept. training responsibilities.

3. Provide organization development line managers, technical contributors. and personnel staff as they work to achieve business and "people" goals. Provide a strategic focus on key areas such as organization climate, group interfaces, management systems and engineering processes:

Continue the integration of key groups into/with other organizations ie:

Formally identify Steils' and Glorioso's staff with respective Engineering Development groups.

Support project manpower flow between MSD groups (Adv. Dev., Prod. Dev., S.W. and Hydra)

Develop Terminals organization plan and communicate integration of Printer and Video.

Assist in defining charters and relationships between SSD and LSI group.

Establish an on-going sensing program to test the environment and to give data to management. Tewksbury is being used as test site.

4. Provide the preper supply of cuplified candidates to meet the staffing requirements of Central Engineering.

Meano? Establish an effective Internal Transfer process.

Develop, implement and monitor consistent administrative systems and metrics for the C.E. Staffing and Placement Organization.

Develop and administer the College Relations and College Recruiting Programs.

Develop and implement programs to educate all users to their role in the S&P process which will gain more effectiveness and efficiency. Some examples of these programs are: Interviewing skills workshops; "State of the Marketplace: communications; and "How the administrative system works."

Develop and implement proactive Affirmative Action sourcing programs to help increase our representation of minorities and women in C.E. organization.

H.R. planning process to understand C.E. technical and managerial needs 3-5 years out: Design, Implement, Review results.

5. Create and maintain management awareness of Compensation/Henefits programs:

How they are developed

How they are utilized within their respective organization

How effective they are

How to bring about program changes

Conduct and/or have conducted training in Comp/Ben at various locations.

Design communications network to aid in development and implementation of Comp/Ben programs.

Establish a company visit program with 12-14 companies to talk about engineering and engineering related jobs. Visit 2-3 companies per quarter.

b. Develop and maintain an effective Employee Information System.

Personnel Information System:

Too mul

unden medere als en en er en andere andere i bester underer er forsteren er
Conduct C.E. needs analysis Scope out system specifications Develop maximum utilization of System 1022 Augment Corporate programs with compatible Engineering programs. Continue and expand use of Personnel Activity Reports.

7. Collaborate with and support Corporate Personnel and other DEC Personnel Departments.

Manage the Staffing and Placement Function across Central Engieering while integrating into Corporate Programs and Goals.

Scope managment positions: Continuation of management slotting project.

Personnel Training program for DEC personnel department.

Individual development plans for OOD members.

Corporate 0.D. Thrust: Consulting group; Functional 0.D. Mgrs.; Al Fitz.

'. Provide a competent Personnel Department that is capable of supporting the Engineering group.

Pe fully staffed.

Develop and review with management site department plans for Hudson and Spitbrook Rd.

Department management:

What are we going to do for ourselves?

How are we going to review goals and objectives?

What is our management process?

Consulting skills training to C.E. professional Personnel staff.

COMPENSATION/BENEFITS/ADMINISTRATION GOALS

- I. Create and maintain a management awareness of Compensation/Benefits programs:
 - How they are developed.
 - How they are utilized within their respective organization.

7/24

- How effective they are.
- How to bring about program changes.
- II. Develop and maintain an effective management information system encompassing Compensation/Benefits and general Personnel information.
- III. Create and maintain an effective benefit communication network designed to aid in program development and program implementation.
 - IV. Develop and maintain a system for bringing about the proper balance between external market salaries and internal job relationships.
 - V. Provide a smooth working administrative organization for carrying out various Compensation/Benefits programs and provide the technical and management direction to ensure programs are continuously updated.

Human Resource Planning and Development

(

Ń

ţ

HUMAN RESOURCE PLANNING AND DEVELOPMENT DEPARTMENT LONG RANGE GOALS

- 1. Provide program management in Human Resource Planning and Development to enable Central Engineering to understand and meet its technical and managerial staffing needs 3-5 years out. In so doing, help the organization accomplish the Product Strategy and help individual employees satisfy their career needs.
- 2. Provide organization development to line managers, technical contributors, and personnel staff as they work to achieve business and "people" goals. Provide a strategic focus on key areas such as organization climate, group interfaces, management systems and engineering processes.
- Coordinate our Department efforts with appropriate Corporate Personnel resources. In addition, collaborate with other DEC Personnel Departments.

GF:amt 9/25/79

						-Internal O.D. people help one another.
						-Al Fitz feels support.

Human Resource Planning and Development Department Objectives dropped since Squam Lake Meeting:

- A. Competency profile for O.O.D. level jobs.
- B. Consulting skill training for personnel generalists (i.e. no formal workshop training but hopefully informal training will occur via consulting projects).
- C. Joey's participation in Corporate Personnel Training Task Group (i.e. need an alternate).
- D. M.T.O. Evaluation (i.e. Guy is no longer project manager and plays a minimal support role).
- E. Wilkof Study (i.e. Guy only plays a minimal support role).
- II. Other potential Human Resource Planning and Development objectives not included in FY'80:
 - A. Human Resource Planning and Development:
 - 1. Support local (e.g. Software) Human Resource Planning efforts.
 - 2. Career planning/development process for Central Engineering Personnel staff.
 - 3. Career planning help for line staff (e.g. for "displaced" employees).
 - 4. Support supervisory policies/procedures training efforts.
 - B. O.D.:
 - Support general interface work with other functions (e.g. manufacturing, product lines, customer service).
 - 2. Supporting 0.0.D. on several of their goals (e.g. 3, 7, 8, 9, 10, 15, 20).
 - 3. Developing a general sensing/communications strategy for Central Engineering.
 - 4. Developing a strategy for Male/Female awareness training for Central Engineering.
- III. Guy Fincke's management objectives for FY'80:
 - 1. Assimilation program for Joey.
 - 2. Annual objectives for Joey and Ann.
 - 3. Quarterly review on objectives for Joey and Ann.
 - 4. Quarterly report to John Meyer on key activities and accomplishments.
 - 5. Individual development plans for Joey and Ann.
 - 6. Annual performance reviews for Joey and Ann.

 \bigcirc

8. Recruit additional staff.

9. More visibility with Gordon, Larry and other 0.0.D. members.

INTEROFFICE MEMORANDUM

TO: Larry Portner/Gordon Bell DATE: 7 April 1980 FROM: Grant Saviers DEPT: Storage Systems EXT: 9765 LOC/MAIL STOP: ML3-6/E94

SUBJ: FY'80 OBJECTIVES

Attached are my comments on my FY '80 Objectives. I understand that we will discuss these on April 16th.

ems attachment

· move to CX. · Totel bus. plan for ing + mfg. FY80 OBJECTIVES STORAGE SYSTEMS DEVELOPMENT Suptembrie of resp. below sognuntation of resp. below Saviers- Jutman. GOAL: leadership...competitive products - implement Redbook o strategy essentially unchanged or programs <=2 quarters late TU77 F±1C o R80 against this stop. RP07 may overrun, TU78 ok - major programs <=2 quarters late - 75% overall on schedule o tough goal, longer planning focus is helping o implementing phase review process to help - removeable media tactics defined - five DECUS participants - ongoing o on target, process was productive o strong systems focus @ low end o tactics have reasonable stability - IR100 award > apply in FY80 o done, RA02 - trade journal articles - 1 per guarter o ok, but still lots of missed opportunity; need to stimulate R80 team, RX04, RP07, TU78 competitive pricing on new products o ongoing, RM05 looks very good GOAL: management structure and process...commitments... expectations....results - new FY80 Beige Book by Jan 1 o cancelled, except for revised FY '80 bugets better FY81 Redbook, start Q3 o underway, on schedule - clear "functional requirements" - all new products done, good process, need to improve quality and 0 consistency - project reviews on six week cycle ongoing, implemented, quality dramatically 0 improved, Mfg. starting to use effectively - "programs" defined by end Q2 only one for storage is new architecture, which 0 continues to look good GOAL: product line and systems groups support - quarterly status to group VP's and/or staff o not done, in process of getting scheduled now, Andy's 4/11/80 - systems participation in six week reviews by Q3 end need to have a better process, this one is wrong. 0 software is participating in CX and communications are valuable - clear systems interfaces by Q3 end o thought that "systems focus" was ok. Now know expectations are divergent. Am writing our view. Our charter says what we mean.

GOAL: technology centers - joint engineering/manufacturing plan by Q3 end good program, 1 qtr. slip with overal OOD plan, 0 best process in OOD - approval in Q4 o double, but dependent on OOD & Corporate strategies GOAL: human resource development - hire 40 college graduates in FY80 o on target, may overhire - do functional college recruiting o ok, ME hite going exceptionally well - clear college level "joining up" process by Q4 end have outline and people thinking about it, but not 0 implemented - systems load test all new products by Q3 end in moderate progress, software folks are helping ο (RM80). Still need more ownership by Storage Eng. managers. Have a TM78 plan. GOAL: internal organization - fill CX opening by Nov 15 o complete (Lignos) - fill floppy/cartridge tape by 1 Jan o complete (Bauer)

- quarterly woods meetings of Storage staff
 o Q2, Q3 done. Q4 scheduled
- minimize conflict ML/CX, PD/AD, PD/PM
 - significant progress, "team" is building, issues delegated to subcommittees, issues now legitimate, need closure

GOAL: stable....exciting....environment

- low end tactics by Q2 end

- o done, ongoing process working with Shanzer, Webber
 >=3 technology dumps per year ongoing
 - o done, next one May 12, 13
- get into semi mainstream use gate arrays in a project
 o CX committed to do one ASAP & follow up with CAD tools
- Adv. Development initiated in CX in Q2 o Jack Brown in place and hiring
- help with mechanical CAD
 o contracted with other groups (terminals, sm. sys.)
 to provide support
- half of logic engineers learn logic CAD this year
 o SUDS generally in use in CX, terminals ordered for ML

GOAL: track technologies

- implement planning function done Ql increased staff Q3
- build metrics/models ongoing
- expand forecast model to memory Q2
 - o complete
- high end model/options by end Q3

 complete, presenting to Ulf, Busiek, will schedule
 Gordon
- meet twice per year with major suppliers

 ongoing, meetings ok, need to develop a more formal process to survey non-suppliers, especially outside USA

GOAL: measure....as customers measure....and evolve

- do market research plan by Q3
- DECUS surveys ongoing, panel on storage at Chicago

GOAL: Increase market share...field merge

- all products dock merge certified at P.A.
 o almost hopeless
- continue proposing to DCG 1 "special" disk in FY80
 o starting to push R80 looks like we have an excellent opportunity with CDS, also T & E floppy. Need to help them understand the market.

Grant Saviers October 22, 1979

Updated Comments April 4, 1980

CHARIER STORACE DEVELOPMENT

Storage Development is responsible for developing storage products that support the objectives of the corporation by meeting the needs of the Systems Groups and Product Line organizations.

- Develop and manage the corporation's technology and product strategy for storage devices.
- Insure jointly with the Systems Groups that the strategy is consistent with our systems goals and is as competitive as is feasible in the storage marketplace.
- 3. Implement the strategy by acquiring and/or developing technology, components, devices, drives, attachments, and subsystems. Develop quality products for the System Groups for systems integration and secondarily for Components Marketing if sold as a component.
- 4. Assist the Systems Groups and Components Marketing in their projects that tightly integrate standard high volume components, devices, or drives into systems or customer applications. Aggressively insure the use of standard products across the broadest range of applications.
- 5. Develop innovative products and subsystems to well-defined interfaces, interconnects, or software standards that are consistent with corporate architectural standards. The form, fit, and functional definition of subsystems are a joint responsibility with the Systems Groups.
- Actively assist the corporate move to a Systems focus via joint efforts with the Systems Groups in planning, analysis, and definition of storage functions, technology, and products.
- 7. Be the primary focal point within the corporation for understanding the storage products, plans, technologies, and capabilities of storage suppliers and systems competitors.
- 8. Provide the product focussed business management of storage products for the corporation via Product Management.
- Establish a partnership with Storage Manufacturing that is responsive to the strategy and flexible in meeting the needs of our customers.
- 10.° Strategically manage the relationship with Storage suppliers and lead our efforts to establish licensing, technology, or product exchanges.

Grant Saviers Sept. 1979

GOALS - STORAGE DEVELOPMENT

ACCUS BOOK

(approximate priority order)

- Develop or acquire leadership or at least competitive storage components, devices, and attachments across the product spectrum as rapidly as possible; these products should primarily match the systems needs of the corporation and secondarily, should be saleable as components. Recognizing that generally IBM has a dominating lead, we should excel first at the low-end and quickly extend this competitive position upwards.
- 2. Be recognized as leaders by our customers relative to our systems, third party, and selected components competition.
- Have management structure and process that makes good commitments, explicitly sets the expectations of those groups that are dependent upon us, and then insures that the commitments are met.
- 4. Establish Product Line and Systems Groups support, so that we are responsive and competitive in providing the products that are needed.
- 5. Continue to establish joint siting of engineering and manufacturing as technology centers, managing them for outstanding performance, for rapidly advancing process intensive technologies.
- 6. Have an aggressive human resource development program that focuses on minority and female development and implements the majority of our recruiting at the college graduate level.
- 7. Emphasize the quality, reliability, and ease of use in the implementation of our products.
- 8. Have a clear internal organization that is simple and effective at its interfaces.
- 9. Take prudent risks and create a stable, stimulating, and exciting environment that is fun for "winners" to work in.
- Track storage technologies and select a hierarchy of winners for the systems that we sell.
- Measure ourselves as our customers measure us and evolve our metrics as our markets evolve.
- 12. Increase our market share by encouraging the establishment of broader distribution channels and field merging of storage products at both the subsystems and component levels.

Grant Saviers Sept. 1979 FY80 OBJECTIVES - STORAGE SYSTEMS DEVELOPMENT

GOAL: leadership...competitive products

- implement Redbook
- major programs <=2 quarters late
- 75% overall on schedule
- removeable media tactics defined by Q2 end

GOAL: recognized leaders by customers

- five DECUS participants ongoing
- IR100 award apply in FY80
- trade journal articles 1 per guarter
- competitive pricing on new products ongoing

GOAL: management structure and process...commitments... expectations...results

- new FY80 Beige Book by Jan 1
- better FY81 Redbook, start Q3
- clear "functional requirements" all new products
- project reviews on six week cycle ongoing

- "programs" defined by end Q2

GOAL: product line and systems groups support

- quarterly status to group VP's and/or staff
- systems participation in six week reviews by Q3 end
- clear systems interfaces by Q3 end

GOAL: technology centers

- joint engineering/manufacturing plan by Q3 end

- approval in Q4

GOAL: human resource development

- hire 40 college graduates in FY80

- do functional college recruiting
- clear college level "joining up" process by Q4 end
- inventory personnel for development programs by Q3 end
- development programs for all managers by Q4 end
- two performance appraisals/year for all exempt levels by end of Q3

G 🔎: quality, reliability, ease of use....products - push Field Service for written strategy by ??? - internal standards for physical customer interfaces - Q3 - systems load test all new products by Q3 end GOAL: internal organization - fill CX opening by Nov 15 - fill floppy/cartridge tape by 1 Jan - quarterly woods meetings of Storage staff -- minimize conflict ML/CX, PD/AD, PD/PM GOAL: stable....exciting....environment - low end tactics by Q2 end - >=3 technology dumps per year - ongoing - get into semi mainstream - use gate arrays in a project - Adv. Development initiated in CX in Q2 - help with mechanical CAD - half of logic engineers learn logic CAD this year GOAL: track technologies - implement planning function - done Q1 - build metrics/models - ongoing - expand forecast model to memory - Q2 - high end model/options by end Q3 - meet twice per year with major suppliers - ongoing GOAL: measure....as customers measure....and evolve do market research - plan by Q3 - DECUS surveys - ongoing

GOAL: Increase market share...field merge

- all products dock merge certified at P.A.

- continue proposing to DCG - 1 "special" disk in FY80

Grant Saviers October 22, 1979

Growt Sam

INTERDEPENDENT OBJECTIVES - STORAGE X OOD

implement Redbook - Sam & Bill must get interconnects settled and hardware implemented.

removeable media tactics defined by Q2 end - Good progress to date, but will require existing resources through Q2 by Dick, Bill, and Ulf.

<u>clear "functional requirements" - all new products</u> - Dick, Bill, and Ulf should provide customer usage, functional requirements, and the hardware/software alternatives to meet the needs. We need clear models and metrics as targets for technology solutions.

systems participation in six week reviews by Q3 end clear systems interfaces by Q3 end - We want dedicated, capable, visible, management level representation and interface to foster trust and communication with Dick, Bill, Ulf, and when appropriate BJ and Sam.

human resource development - John, I need a personnel manager! And staff!!!!

p Field Service for a written strategy by ??? - Si should help.

systems load test all new products by Q3 end - A discipline that should be improved. John should make this process clear.

get into semiconductor mainstream - use gate arrays in a project Jim could do more internal selling. Bill & Ulf should be more missionary when it's time for others to jump in. Dick, our micro development tools should be as good as Intel's.

help with mechanical CAD - Work with John H. to develop an OOD philosophy and strategy.

half of logic engineers learn logic CAD this year - John should make this easier and insure that hardware/software works and can be installed at reasonable cost and effort.

expand forecast model to memory - Probably GIGO applies now. Si should generate a credible systems forecast process and close with Product Lines on the numbers.

Grant Saviers October 22, 1979

DBS1/4

OPERATIONS CHARTER

Context:

It has become apparent to the Central Engineering organization that Digital has entered and is moving in a world computing scene characterized by compounding complexity. New technologies, corporate growth, expanding markets, expanding product sets and an increase in inter-group dependencies have all contributed to the complexity.

Central Engineering accepts that complexity in all of the above areas is on the increase, and management techniques and organization structures must evolve to handle this complexity.

The advant of the Central Operations activity as part of OOD along with the PM4 are the latest of the changes to help Central Engineering cope.

Score1

The primary function of the Central Operations activity will be to define and implement the minimum, but sufficient, set of measurement and planning criteria to allow for the sensitive and sensible management of Central Engineering. The measurement and planning criteria will be arrived at by augmenting rather than replacing existing systems and techniques.

Amons the items which Central Operations intends to influence are:

- o Planning process and completeness
- Review methods for products, programs and options
- o Change control for working documents
- o Dependency management
- o Budset to performance coordination

In all the above it is Operations role to develop and administer the process, not to do it. The doing is a line management responsibility. In all of Central Operations activities, we will endeavor to build on existing process and minimize bureaucratic overheads.

It is intended that the Operations' activity will brind about behavioral change which will allow each individual to do his or her Job better. Success will allow the Corporation to better understand and deal with the development associated problems.

OPERATIONS GOALS

- To evolve new systems or processes from existing systems or processes which will facilitate the achievement of the Central Engineering management strategy.
- To educate managers as to the requirements for plans and planning.
- 3. To inspect plans for status and viability.
- 4. To coordinate inter-group activities in such a way as to cause reviews to be held in the event of significant mismatches.
- To coordinate inter-group plans to ensure completeness and consistency.
- 6. To install review mechanisms that will allow for problem identification and resolution.
- 7. To install escalation procedures which will alert Central Ensineering management to the need for review.
- 8. Via the PM4 ensure that dependent parts of the Company are aware of problems in Central Engineering which may impact their performance.
- 9. To coordinate Operations activities in each group with Central Operations.
- 10. To administer the management process (planning calendars, budget calendars, Red Book, Yellow Book, etc.
- 11. To help establish budget to achievement measurement techniques.

/ma

CENTRAL OPERATIONS OBJECTIVES FOR FYBO

- 1. TO HIRE TWO STAFF CAPABLE OF ACTING AS MANAGEMENT SYSTEMS CONSULTANTS BY JANUARY 1980.
- 2. TO ESTABLISH THE ADMINISTRATIVE STRUCTURE TO HANDLE PLAN REPOSITORY, CHANGE CONTROL, AND REPORTING BACK BY JANUARY 1980. THIS STRUCTURE WILL ALSO PRODUCE A STATUS BOARD/REPORT WHICH WILL ALLOW FOR STATUS CHECKING AT ANY TIME BY MARCH 1980.
- 3. TO ADMINISTER THE RED BOOK, BEIGE BOOK, YELLOW BOOK, BUSINESS PLANS, AND PRODUCT FLAN SUMMARIES BY MARCH 1980. THIS WILL INCLUDE REGISTRATION, CHANGE CONTROL, AND THE NECESSARY CHECKS AND BALANCES TO ENSURE THE RE-LATIONSHIP BETWEEN THESE FROCESSES.
- 4. TO ACT AS AN AUDIT ACTIVITY ON MANAGEMENT PROCESS AND RECOMMEND CHANGE WHERE NECESSARY. ON GOING.
- 5. TO ENSURE THAT INTELLIGENCE EXISTS WHICH CAN LOOK AT DEPENDENCIES AND PLAN VIABILITY BY JANUARY 1980. IT IS INTENDED THAT THE PEOPLE FROM \$1 ABOVE WILL BE CAPABLE OF PERFORMING THIS ACTIVITY. THIS OBJECTIVE WILL LOOK AT ALL PLANS WHICH WE HAVE FOR COMPLETENESS AND SANITY AS WELL AS ENSURING THAT DEPENDENCIES ARE CONTROLLED WHERE NO SYSTEM OR PROGRAM FOCUS EXISTS.
- 6. WORKING WITH LARRY FORTNER TO ESTABLISH AN ESCULATION MECHANISM BY FEBRUARY 1980.
- 7. TO TAKE THE AGREED REVIEW PROCEDURE FORWARD AND SET UP A LIST OF PROGRAMS AND FREQUENCIES BY JANUARY 1980.
- 8. WORKING WITH SI LYLE AND LARRY PORTNER, ESTABLISH A DOCUMENT SET AND AP-PROVAL PROCEDURE FOR CENTRAL ENGINEERING BY DECEMBER 1979.
- 9. COMMUNICATE #8 AND SEE IT WORKING IN CENTRAL ENGINEERING BY JUNE 1980.
- 10. TO ESTABLISH A FUNCTIONAL OPERATIONS ORGANIZATION ACROSS CENTRAL EN-GINEERING BY DECEMBER 1979. THE INTENT HERE IS TO FOCUS ON THE MANGEMENT SYSTEMS/PROCESSES ACTIVITIES IN EACH ORGANIZATION AND PROVIDE A DISCUS-SION/ACTION FORUM.
- 11. VIA 10 TO START ELIMINATION OF DUPLICATE ACTIVITIES BY MARCH 1980.
- 12. WITH MITCH KUR START AN ACTIVITY TO MEASURE PROJECT ACHIEVEMENT VERSUS PROJECT SPEND BY JANUARY 1980. THIS OBJECTIVE INCLUDES EVALUATION OF THE CURRENT FINANCIAL REPORTING MECHANISM WITH AN EYE TOWARD CHANGE WHERE NECESSARY. ACTUALLY REPORTING ON THIS BASIS WILL BE TARGETED FOR FY81.

DBS1/16 10/31/79
13. TO ASSESS THE RESULTS OF THE REVIEW PROCESS WITH GORDON BELL AND LARRY PORTNER AS TO COST VERSUS BENEFIT BY JUNE 1980.

14. TO CONTINUE TO WORK WITH THE LINE UNITS TOWARD COMPLETE MANAGEMENT SYSTEMS IN THEIR INDIVIDUAL AREAS. ONGOING.

BES1/16 10/31/79

INTEROFFICE MEMORANDUM

TO: Larry Portner

,
31 July 1979
John Holman
. //0*
3-5533 //
STOP: ML12-2/T36

SUBJECT: My personal agenda

Key items on my personal agenda are

- 1. Fill Financial, Personnel openings for managers.
- 2. Absorb Vonada, Verostic into organization.
- 3. Get cost center signature authorization straightened out. We could come to a grinding halt.
- 4. Get Paul Bauer to make up his mind.
- 5. Revitalize our RFI/EMI activity. Ken's suggestion of a consortium meeting is an excellent one. It could identify:
 - A. Issues
 - B. Talent
 - C. Corporate Direction
- 6. Pick a name for our group. Any ideas?
- 7. Tewksbury Power & Packaging Leadership.
- 8. P.C. Technology owner should be identified soon. I feel that this problem belongs to me via Tays, Lawrence.
- 9. Carefully review the basis of each budget to establish my agreement. I feel uneasy allowing people to hire additions.
- 10. Get Jerry Butler up to speed in CSS as quickly as possible.

/jm

While we're busy focusing on getting our goals, charters, objectives and the like sorted out, I have this gnawing concern that we may let something important slip through the cracks in the short and intermediate term aspects of managing our business, particularly in areas that have new occupants in the key jobs. I believe that we need to reaffirm quickly what our major focus should be for the next six months. I'm sure there are issues in Sam Fuller's space that relate to technology and architecture; John Holman, I'm certain, has a set of issues that have the potential, unless understood, to squeeze us in a capacity bind for critical services. Major strategic issues lie within the domains of each of the line organizations and in particular I'd like to highlight those that are spread across several organizations - these are the ones that everyone assumes that someone else is going to take care of. Specific examples here may be Distributed Processing, the HYDRA program, and I'm sure there are others.

In this context, would each of you please just drop me an informal note giving me your current list of items that are on the top of your personal agenda or should be on the top of the O²D agenda for us to keep our finger on while we move forward in longer term directions.

· Setting the adv. Dev activities in pproducts and semi mfg neutructured to insure we make key programs happen - VRNUS (MCA), PUSART (HTHOS) Frioress for better product / I Sd clanning linking

INTEROFFICE MEMORANDUM

AND LE THE

(v

TO: Larry Portner

DATE: 13 August 1979 FROM: Grant Saviers DEPT: Storage Systems EXT: 9765 LOC/MAIL STOP: ML3-6/E94

SUBJ: PERSONAL AGENDA ITEMS (Q1)

- 1. Develop an organization strategy jointly with Portner and Bell (underway).
- Commence implementation of reorganization (Riggle and Gutman finding out about it).
- Establish a periodic program review system (discussed with staff no plan as yet).
- Get TU/TM78 to critical Mass and meet commitments (offers out, have a plan).
- Work with Removable Media Task Force to develop the strategy (underway).
- 6. Continue to observe, learn, listen, understand the OOD process. Work at developing the relationships.
- Start working the Product Line interface (meet with Marcus' staff, 8/28/79.
- 8. Hire some top talent. (Hired Ed Burke starts 8/20/79).
- Follow up on CDC 7/25/79 meeting. Meet with STC, MRX, and ISS. (Legal doing non-disclosure.)
- 10. Solidify Gordon's position on HSC. (Fuller to publish note.)
- 11. Get LRP dialogue started with Puffer (meeting of our staff on 9/26/79).

Grant

Out # | problem. DIGITAL'S PHILOSOPHICAL BUSINESS BASIS

Reaffirm Historical Business Philosophy

1. Metrics

Individuals and groups have goals including clear, comprehensive metrics of success and are measured against them regularly.

2. Responsibility

Managers are totally responsible for their plans: for making them, for getting approvals, for executing them, for getting others' commitments and for considering others' limitations. Managers are trained and selected to take this kind of responsibility.

3. Investment Decisions

Plans and changes to plans are approved on the basis of what is best for the company as a whole in its business environment. That is, individual investment decisions are constrained to an overall portfolio of P/G, Product and Geographic businesses.

Changes Necessary in the Implementation of This Business Philosophy

1. Better Metrics

Develop and use more effective Metrics for evaluating plans and performance - metrics which ensure corporate performance is achieved through individual performance against those metrics - metrics which are simple for individuals to compute, but robust enough to apply internationally without ambiguity and withoug manager-to-manager confusion.

2. Manager Training & Selection

Train managers to understand the comprehensiveness of their responsibilities and to develop the skills to work on that basis.

3. Corporate Capability Development

Clean up the proposal and approval process so that decision making is more automatic and learning rates are accelerated.

INTEROFFICE MEMORANDUM

TO: SEG/CAD Users

DATE: 11 January 82 FROM: Arny Goldfein DEPT: SEG/CAD EXT: 225-4926 M/S: HL2-2/J13 DECNET: ELSIE::GOLDFEIN

ſ

- SUBJECT: SEG/CAD, Objectives and Key Results Q2 FY82, Rev. 0
- I. Increase speed, reliability, maintainability of the CHAS custom-MOS integrated design system, while extending it's functionality to include schematic entry (DECDRAW), RTL simulation (DECSIM), and graphic output from circuit simulation (SPICE).
 - A. Publish a revised CHAS architecture document. (2/20)
 - B. Publish performance analysis study of CHAS Version 2. (1/31)
 - C. Release CHAS Version 2.1 with bug fixes and some performance improvements. (1/20)
 - D. Implement architectural changes to CHAS data base, menu-actor interface, and actor dispatching in CHAS Version 3. (3/20 field * test)
 - E. Publish CHAS Version 3 interface specifications that detail the CHAS/DECDRAW, CHAS/DECSIM, and CHAS/GRAPES interfaces. (2/20)
 - F. Release CHAS Version 3 field test on CHIPS and SHORTY. (3/20)
- II. Provide MOS design engineers with a production quality MOS schematics drawing system (DECDRAW). The delivered tool should meet the users requirements for scheduling and function.
 - A. Install and demonstrate DECDRAW Version 1.0 on CHIPS, SHORTY and NANCEY. (2/15)
 - B. Install and demonstrate DECDRAW Version 2.0 on CHIPS, SHORTY and NANCEY. (4/1)

SEG/CAD, Objectives and Key Results

- III. Improve behavioral modelling by allowing use of models which are independently compiled and introduce MOS simulation (modelling all known MOS signal states/failure modes) and Fault Simulation (concurrent fault simulation, verifying test effectiveness) into DECSIM.
 - A. Distribute to SCORPIO a version of DECSIM containing: (2/3)
 - (1) Terminal debugging for behavioral models using the WATCH command.
 - (2) Simulation of timing in behavioral models.
 - (3) Compilation of behavioral models containing timing statements.
 - (4) LOAD command able to load microcode into simulation memory.
 - B. Publish a design specification for MOS simulation. (2/26)
 - C. Publish a functional specification and plan for fault simulation in DECSIM, including statements on ATG. (3/15)
 - D. Test the currently written code for fault simulation within DECSIM. (3/30)
- IV. Provide NAUTILUS and memory engineering a placement and routing system for TI's 2000 gate array (TAT020) for production use in Q2, FY83 and for EMMA.
 - A. Publish results of comparison between DEC's and TI's placement and routing tools using TI's 800 gate array (TAT008). (1/31)
 - B. Publish results of comparison between DEC's and TI's placement and routing tools using TI's 2000 gate array (TAT020). (3/31)
 - C. Publish plan for production layout system. (2/28)
 - D. Load FINCUT placement results into IDEAS layout editor. (3/26)

SUBJECT: A BETTER? SEGMENTATION OF MEG/ENG/MKI(IN SOME INSTANCES)

Buildson OEM It feels like we could have a cleaner coupling between principle that manufacturing and engineering. Also, we need a better segmentation of product flow among the plants. There is an assumption that each major product grouping is quite vertically integrated, at least back to include modules and special packasing. Since we are stressing point of manufacture and field integration, the organization is set up to focus on this.

Although this structure is focused mainly on the Manufacturing Engineering coupling. In several cases it could conveniently extend to couple to the product lines, such that it would be possible to have a segmented business unit of manufacturing, ensineering, and one or more product lines. In nearly all cases, products sold on the open market would also be sold internally as part of larger systems (eg. terminals). Note these groupings:

Group name	Customers	Suppliers	Interted systems: oneo
Semiconductors	MS, T, S, M, L	Ext. too	that evolve firm a chan
Microprocessors Mass store (MS)	Ext., S, M Ext.?.T. S. M. I	Semis, Phys. I/C Semis, PIC	bare.
Communications and networks	Ext.?:PLs	Semis, PIC	
T-based systems Small	Ext, PLs PLs	Semis, Phys. I/D, Micros, MS,	MS
Medium	•	Semis, PIC, MS	
Larse	•	а Ал	• • .

min (# cnoups; # interdenendencies;

Behavior is like a semiconductor supplier! Supplies chips and occasionally a set of chirs carrying out a wall defined function and mounted in a single or multi-chip carrier. .The bis issue is how to segment this to set the necessary charter protection among MOS; Bipolar TTL, and Bipolar ECL? Also, how do we tradeoff between manufacturing and ensineering resources (product ships versus new products)?

Physical Interconnect and Packading (M/E) This group would develop and sell this components (chip carriers, boards, modules, and back planes) to both develop groups and to Tost finner plants. It would operate a manufacturing facility in which : **-** ' automation is tested and it would work on leading edge processes that are not done in a specific product stoup. This might Ist Frank

Destribution cratical and the The state of the state of the state · dist.

include: very low cost PI or PIP, the high performance packaging needed in Venus/2080, and chip carriers. It would have: component development, cad development, process development, and test development. I would like to see us try to segment this effort and see whether such a group could exist. Some questions: .What would it include? .How does it couple to the plants? .To the groups it serves? How is it funded? (The measures of this technology are quite clear!) How much of power? .How much of packasins? .How much is in the higher level-of-integration groups? ETC. This is very important to look at, but very tough to do (assuming the people are not emotional about looking at it.) Microprocessor board and box-level components (M/E/Mkt) Fundamentally this group would develop module-level components for higher level systems sold through the PL. It would also sell its components so that a Small systems group could build conventional End user and OEM products complete with disks, comm., etc. Other systems groups would buy modules. .Should we look at it, siven the opportunity of it all comins together in Hudson? Mass Storage (M/E) Clearly a seperate entity. .With the purchase of new board shop, is there a way to further clean up the interface so that modules are in their purview too; $i \cdot e \cdot how$ can we set them to a fully stand-alone vertically integrated division and out of the rest of the M/E planning, etc.? .Should the low end be part of the Terminals activity? (probably not, siven the work needed to deal with better video; comm., intelligence and sw). .I'm still convinced that it is desirable and maybe even necessary to sell disks on the open market to be truly sood here, .How can we get a look at this objectively? .How can we set a better interface between disk and the systems groups to avoid building expensive, segmented sub-systems (ala floppy)? .Getting right DM package ala the RL's? •Dealins with what I describe as Type IV packages (where all the stuff is in one cab, and we currently need FAT)? Why aren't these built into the disk instead of a CPU plant? .Taking advantage of the HSC such that this is also the high end 11 system rather than returning it to NE for FATing? Communications and Networks

With the new interconnect structure and the increased focus on networkins, it would be very sood to have a strong emphasis again on these products within all parts of the organization, including the field. In some ways, the product strategy lessens the product focus need because all products must have built in connections. There will be more emphasis in terms of: communications concentrators ala Mercury (part of Hydra and other products), Hydra itself is structured this way, Gateways to IBM, x.25, and the phone companies, and voice switching. Electronic mail systems per se might be sold through this channel. This group would supply standards to other systems and products per 50. .What is the best way to provide this focus? .What is its product charter? .How are M and E coupled? Is there a need for a better PL focus? Terminal and Terminal Based Systems (M/E/MKT) This one is clear I hope. I'm deadly afraid of seperating dumb and smart and intelligent, cause they are just a few Kilobytes of RAN away from one another and differ by whether there is secondary memory or not. In the not too distant future: I see the conversence of all our current dumbs to have local intelligence and sufficient secondary memory, versus being all dumb. This follows the Xerox and Datapoint models to a certain extent. At any rate, the customers are: all systems, Terminals PL, most of WPS, and Retail. .How can these best be coupled to form a business unit? •How to segment into various price and function ranges? • .How to integrate the base software? .The applications software? . Is there a need to have the mass store as part of the group? System groups (M/E) Currently this is a disaster by every conceivable measure: inventory, cost, time to set something to market, forecasting, order processing. Jack's edict that we are not soins to have any more FAT, but instead are spins to ship from point of manufacture beginning in year ?, is the beginning of what should bring about this change. We still must deal with the turning of the corner of what we produce as components and what some customers and PL's, believe is an ala carte approach to building systems. The interconnect fully supports this approach! Some of the questions: How many, and what is the segmentation? (by type, \$-amount, architecture, technology?) .How is the corner turned so that FL's "feel" their inventory? .What are the rules to deal with "specials" ... which I think are minimum? .How to plan the transition associated with the products and back up if there are any slips? Diagrammatically, the product flow, through the various M/E and possible M/E/Mkt groups to PLs would be as follows: Semis PIP (lead technology only, not dominate supplier) 1 ļ 1 1 1 MS+PL?-x Micro+PL-x! !!!! I I I I T+FL?-× C/N+PL?-× S M I I I I L !

```
!
OEM and End user PL
!
x
```

× = customer

This is hardly meant to be final, but is rather something we might discuss from. I think it would acccomplish better interfaces and more autonomy among the groups.

What you folks think?

Hopefully it might help in the Woods discussion on Wed./Thur., although it only deals with trying to segment a small part of our world. Again, please don't take it as final. (There is another memo that deals with the various dimensions I use to work on segmentation.)

O/C Presentation

TO: LARRY PORTNER

cc: JOHN MEYER

DATE: SUN 13 JUL 1980 11:08 FM EDT FROM: GORDON BELL DEPT: OOD EXT: 223-2236 LOC/MAIL STOP: ML12-1/A51

SUBJECT: CONFIDENTIAL MINUTES OF 7/10/80 MTG.

Minutes of Bell, Portner, Meyer Meeting 7/10/80

Strategic Planning Manager Definition Focus on longer time frame to aid A/D and help establish questions for each of the areas. More than technical: includes tradeoffs between machines, people and make/buy. Si deals 0-3 years. This is longer (maybe out to 90). Again, doesn't do the work, but gets the responsible groups to do it. Would try to work the Japan problem. (The Gallactic Product Strategy). Note that in writing this up, I generated the memo on the Four Dimensions to Segment our Products and Work on them. Also, the memo on the Organization Structure Proposal.

We discussed each of the organizations. This yielded some thoughts on how much time we are requiring from each member and how much they have to really do work. I did a time analysis that showed that I have only 20% discretionary time, the rest is all used up with what are either explicit or implicit meetings. This does not include my time for reading or writing or any more than a few non-scheduled meetings. WE ALL HAVE A PROBLEM HERE! The matrix organized people just have to be hurting bad. I suggest we get everyone to do a time analysis. I'll send mine around as an example. All OOD member organizations are too wide in a conventional span of control sense. Our relationship where 2 people run things in a somewhat segmented way may be necessary.

STATUS OF VARIOUS GROUPS BJ-very wide, what's Dockser do?, should some of the systems work be with the systems groups?

MK- Job scope is bisser than performance, we want more than Just control, we want educator, intellectual and tool builder

Holman-coupling to Mfg? Space planning is a bitch!

SF-growing well, all used up though. Any way to get back to technical review role? Could be valuable in A/D of new machines? Architecture is happening.

Cudmore-group is building nicely, need a push to address some of questions in Intel memo

Clayton-overlap with mid, needs focus on chips, and terminal systems, opportunity to couple T and T-based Small Systems, I'd like help in Semi strategy wrt Intel, needs architecture, A/D, should software be in here more?, better coupling to Delagi possible?

Demmer-lots on the plate, overlap with Small, Lots of money and not enough output, maybe too much complexity among Hydra and Pearson and Rodgers, who's doing MLK to 780?

Ulf-sucked A/D dry, research management, now into execution with risks abounding, problem of interfacing to mid and to interconnect to get the right product components, problem in the Suvax and PBS area that frustrates GB

Grant-things seem to be happening the right way.

ORGANIZATIONAL TOPICS: .Organizational tuning is needed: who does what wrt stategy?

.Can we better structure MSD and I/C better by breaking apart?)

.Should we put all CPU-based systems together?

.How can we better align with Mfg? (note org, proposal)

Should we seperate all the systems planning from development to avoid the milling effect? (Can we do it without losing the commitement? How can we do it with fewer people and get better results? The situation vis a vis J is awful!

STRATEGY REVIEW .When is the next OOD wide Program Review?

•The Rosins REview of stratesy with 20-25 technical leaders is strongly recommended!

.GB discussed a System Strategy Review body to look at all Product plans wrt strategy. (Per, Rodgers, Husvedt, Sam and/or Strecker, Rosing and Jud)

Strategy needs to be re-evaluated, in light of today's conditions of slips, etc. i.e. how are we coming?

BETTER MANAGEMENT

•No knowledge of how we tradeoff among expenses, capital, labor, space and equipment. We need to build much better tools to aid managers!

.What is Job definition of Direct Report?

•What is site, function and product space decsions to fit strategy requirements?

.How can we interact with OOD members to find out what they are doins and what they need from us and how they are really doins? LP/GB will have an organization review which is now beins scheduled. Includes: space, resources, budget, organization, projects, phase transitions, EBOD/SPU interaction. Assumes Win looks at operational issues of schedules, budgets of projects.

ORGANIZATIONAL DISCUSSION

Gordon and Larry (2) Line developement (6-8) Semis (dotted) Mass storage Software Terminal and Terminal based systems (Small) Mid (Communications and Networks) Larse Functional organization (6-8) Personnel Finance (Administraton) Tech Direct (Stratesy msr) TOPS Manufacturing Engineering (dotted) Product management and marketing Note the potentially large size of the group: 14-18. development portion is setting awfully large. The inevitablity of an even larger staff function is assured! TO: 00D:

cc: PER HJERPPE

DATE: SUN 13 JUL 1980 11:10 PM EDT FROM: GORDON BELL DEPT: OOD EXT: 223-2236 LOC/MAIL STOP: ML12-1/A51

SUBJECT: 4 SEGMENTATION DIMENSIONS FOR OUR PRODUCTS AND WORK

I spend a lot of time trying to structure what we do. For the last few years, I've been using this 4 dimensional space of: Level of integration (the what), the size (scale) of what we build; where we are in the life of what it is we are building; and the activity (or what it is we do).

SEGMENTATION DIMENSIONS

Note the 4 dimensions, which we need to continually refine and hold as our segmentation for engineering and manufacturing organizations:

Level of integration: H/S-chips, chip carrier, module, backplane, box, cabinet, hardware system/ operating system (including files and communications), language, generic tools, application;

Hardware price of the thinds (components or systems) we sell: (hand held .4-1, Terminal based 2.5-6.25, stackable 6.25-16, cabinet(s) 16-40, 40-100, interconnected cabinet 100-250-625, multiple computers using CI 250-625-1.6M);

Phase (life-time): Basic research, Research, Advanced development, Development, Support, Enhance, and Obsolescence; Activity: .Component design, sometimes we call it the technology (the thing- whether it be a chip or a word processing system. We must stick with the notion that one person's system is another person's component... hence we only make components.), Ensineering Process (how can designers use it as a component in the next highest level a design), Manufacturing Process (how do you make it?), Manufacturing test process (how do you know it works?), •Maintainence Process (How can it be made to work over its lifetimea?), Market Process (How do we define it during its various phases and sell it?), ·Management processes (how do we organize; manage and interface to one another to get the work done?)

TOP-DOWN APPROACH (MFG./ENG./MKT. SEGMENTS)

The taxonomy is only useful if it allows us to segment our activities. We are extremely lucky in having growth, because it is comparatively trivial to manage charters. On the other hand, left alone, there will be overlaps and underlaps in an area where the new product opportunities abound (es. WPS, voice on packet switching networks, small systems growing into terminals). I think we ought to use the remainder of the summer to sort this out. Let me suggest two approaches: top down- we look at a cleaner manufacturing/engineering divisional structure; bottom-up, we look at overlap, underlap, and new opportunities.

Significant manufacturing-engineering (and occasionally marketing coupling). I don't want to muck in the divisional space, all I want is to STREAMLINE each group's charter and to have a clear relationship with all other groups as a buyer or seller.

This is the background thinking that led to the organizational proposal today.

What you think?

DATE: THU 21 FEB 1980 12:26 PM TO: JOHN F SMITH @CLEM EST FROM: GORDON BELL DEPT: OOD cc: see "CC" DISTRIBUTION EXT: 223-2236 LOC/MAIL STOP: ML12-1 A51

V

SUBJECT: CATEGORIES OF SYS. TYPES (>1 PAGE)

SUBJECT: Categories of Systems Types by Housing (and Potential Build Process) and System Assembly Process Alternatives

System Types (By Housing)

At our next meeting, let's lie on the fact that we have to "type" the systems by category and work on them in a segmented way.

Currently everything is a single glob, and very hard to work with.

Туре	Housing type	Examples	
I	Hand held	translator, memo writers, calculators	
II	Terminal	VT103, VT138, PDT 110, LA124	
IIIa	Table top, bench		
	top or floor standing	PDT 150	
IIIb	Desk	VT78, VT278	
IIIc	Cart	MINC	
IV	1 or more connected)	
	Cabs (not broken apart)	11V03, 11T23, 11/44 RL	He troub lesons
V	Type IV, but with free-		
	standing peripherals	11/44 with RK, RM, RP; 11/780, KL,	tripps1
		20's	IYPC
VI	Multicomputer in room		(consistent)
	housing	combinations of type V	$C \sim M(C) C \sim C \sim \int dC C C \int dC C C \int dC C \int dC C C C $
			in 1
Tjres	III-IV include free standi	ng terminals in addition to any	
Proce	ssor-Memory-K Controller Ba	sic Component.	Cabirat)
			·)

There are many issues based on type, for example:

We have a problem with type IV systems from a logistic viewpoint with respect to the disks. All the systems have a problem when we deal with the vast array of communication controllers and cables. We have to decide how the various internal controllers for disks especially and memory are spec'd and added. How the cables are distributed. Etc.

How's this for the system types?

Manufacturing Process

We need a similar set of definitions for the manufacturing processes. Are there anymore of them:

Two Stage, FAT Based

- 1. Conventional FA & T. (Call it FAT) stationary build and test.
- 2. Also called S.I & T. (Call it SIT)
- 3. CSI for a small + medium systems which moves product on an auto line or a build to order basis.
- 4. MSI?
- 5. Cold Staging?
- 6. Dock Merge?

All these currently now run at least one disk and none are true dock merge!

Direct Volume Ship, No FAT Plant

- 7. Site Merge by Field Service.
- 8. Site Merge by customer.

I don't feel there are good definitions of these processes. Can we get them?

interoffice memorandum

SUBJ: SYSTEM DEFINITIONS

TO: COD

Date: 5/29/80 Thu From: Gordon Bell Dept: OOD MS: ML12-1/A51 Ext:

223-2236

EMS: @CORE

System: an assemblage or combination of things or parts forming a complex or unitary whole.

Computer system: a collection of computer system components forming a unitary whole.

Computer system component types:

Kernel .PMK basic component- the processor (including its options), - buver of the petmary memory and controllers (including communications, wood count's secondary memory and tertiary memory controllers and special interfaces to other transducers such as line printers) to interconnect with the other components

.Ms- secondary memories (eq. disks)

.Mt- tertiary archival memories (eg. tape)

.Transducer terminals, T's- hard copy and soft copy terminals

.Other T's including line printers, A/D equipment, etc. and special product line equipment

.Software including diagnostics, Operating System, Languages, Databases, network control and interface, and generic text processing. Application software from product lines.

.Manuals of all types.

.Other documentation.

.Cables for the interconnection of components when not included with each of the components

WHAT IS A SYSTEM'S ENGINEER? The person who takes the responsibility for designing, assemblying, controlling, and making sure the components all work as a whole. Currently, we have no one exactly taking on this responsibility but the CPU design groups have agreed to take on this role. This means accepting and handling the special hardware and software that comes from the various product lines and computer special systems. Right now, the responsibility seems to be distributed among the system's groups, any group adding a component, and the FAT plant where they try to build what a customer is led to believe he can order.

ambiqueur ash.el

WHY IS THE SYSTEM ENGINEER WITHIN A CPU GROUP? It has to be somewhere and it is fundamentally oriented toward managing the collection of hardware and how it is assembled. The configuring and cabling is mostly centered around the PMK base, and it should be even more centered this way. It clearly provides the housing and control for nearly all our products. It is not software, and it is not mass storage and it is not the collection of terminals. It is not so arbitrarily aligned with the group who makes the processor, because:

A system name (i.e. the collection of components) historically within DEC and elsewhere bears the name of the processor model number (eg. 4341, 370/148, 2050, VAX 780), but it occasionally bears the name of the Operating System (VMS, UNIX, RSTS...all with modifiers describing the specific machine (eg. 11/70) the Operating System it is running on). Our users all order configurations centered around a particular CPU/Operating System pair and now we are trying to have a limited secondary memory offering that is also associated so that a particular system name will be a triplet of CPU/Operating System/Disk type.

SYSTEMS ARE CORRELATED WITH PROCESSOR, CS (AND USE PATTERN) AND SECONDARY/TERTIARY MEMORY

This all makes sense because the following are correlated:

.processor-type = speed it executes programs and number of users it serves. This is also correlated to the bus speed or type. (Currently we organize by bus type Q vs. U.)

.amount of primary memory and processor speed (Amdahl says 1 Mbyte/Mip) is dependent on the OS and Pc speed.

.operating system, the memory used and the number of users

.amount secondary and tertiary memory per user

Dependent Variables are Price and Package

.the system price AND most importantly:

.the physical size of the system (and how it is packaged)!

(NOTE, a system could therefore be named or identified by any of component types or even the package!)

MEMORY SIZE BANDS TO SEGMENT SYSTEMS

That is, all these vary together in a constant of proportionality fashion. In 75, I showed that if one knew the amount of primary memory (or similarly the processor speed or name), this was sufficient to know how the system was used (Operating system type, whether single function, or general purpose timeshared) because all other factors were correlated with this. Remember that the mass storage of a system is roughly about 1/3 the cost, the terminals about 1/3, and the processor about 1/3. Note in the low end, we are looking at a 1500 system of which 500 is for floppies used as secondary or tertiary memory, the terminal which is pro-rated at about 500, and the processor and primary memory is

SUBJ: SYSTEM DEFINITIONS

about 500! This also holds for the larger system, but things can deviate when there are a lot of terminals not in actual use as in a timeshared system, and it can vary if there is a large database where there is a disproportionate amount of archival storage. This model is is still pretty accurate...eg. I predicted about 19K for 1 Mbyte, in 1980 not knowing that IBM was going to come in very aggressively to lower prices, otherwise, the price model would be more accurate, and higher. The important results of the paper are given below:

G. Bell System Price Model (3/75)

System price (\$) per byte of main memory = $3 \times 5 \times 8 \times .005 \times .79$ t-1972 x no. of bytes = $.6 \times .79$ t-1972 x no. of bytes

where

3 is markup (roughly) 5 is fact that about 1/5 of system is primary memory 8 is 8 bits/byte .005 is cost of a bit in 1972 .79 is 21% price decline per year for memory 1972 is base year

Some systems prices at various times using the GB 3/75 model:

Bytes	Use	1980\$	1982\$
1		.091	.Ø57
100	calculator	9.1	5.7
8K	dedicated fixed	745	467
65K (Qbus limit)	l user interactive	5 .9 K	3 .7 K
256K (Ubus limit)	n user, l applic.	23 . 9K	14.9K

PRICE BAND TO SEGMENT SYSTEMS

Last year, I convinced us all to use price bands that varied by factors of 2.5 so that 3 of the bands gave a factor of 16, and each system group is responsible for particular bands. Only one machine is positioned per band in order to get a better spreading of machines and to limit the numbers from what IBM was doing when the positioned machines at x2 price and x3 performance intervals. This would also get us to focus on the lower cost too. The price bands (K\$) are:

micro	.164-1.0
small	1.0-2.5-6.25-16 (3 ranges, but computers only fit
	top band)
MSD	16K-40K-100K (2 ranges)
LSG	100K-250K-625K (1 range, with second for 10/20)

CABINET TYPES (CORRELATED WITH PRICE TO SEGMENT SYSTEMS) Now, if we use the system cabinets to correlate with use, in 1980, we get the following table:

	Type Package	Technology	<u>Pc</u>	Price (\$K) (Examples)	<u>Mp Size</u>	<u>Ms Size</u>
5	Hand Held	CMOS	8 bit;12 bit	$\frac{(2\pi d_{1}, p_{1}, q_{2})}{.4 - 1.0(?)}$	8K	Solid State
A.	Terminal	MOS/CMOS	Tiny/Fonz	2.5 - 6.25	65K	Floppy
	fixed or portable		VT102	(PDT 50) (Techmate)		molycar
T	Stackable (1 user)	MOS	Fonz	6.25 - 16	256K	Floppy, RL
•	a. bench top b. desk top (1 a	pplic.)	(PDT-MINC) (PDT)			
	c. cart-based d. floor (1 appl	ic.)	(MINC) (VT78, Datasys	tem 315)

SUBJ:	Systems 1970-1990	
TO:	Jack Smith, ML1-4/A54	Date: 2/26/80 Tue From: Gordon Bell
CC:	Dick Clayton, ML12-2/E71 Bill Demmer, TW/D19 Ulf Fagerquist, MR1-2/E78 Sam Fuller, ML3-5/H33 John Holman, ML12-2/T36 Dave Knoll, ML1-4/P14 Dennis O'Connor, ML1-4/P14 Larry Portner, ML12-1/T32 Dave Rodgers, TW/C04 Grant Saviers, ML3-6/E94	Dept: OOD MS: ML12-1/A51 Ext: 223-2236 EMS: @CORE

Here's a cut at the systems between now and 90. Note - we're going to have more than ever before! It doesn't include: the interconnect or Type II and III* systems - but only rack/stack, and free standing. Also it doesn't deal with the standalone high end communications (Mercury) and Mass Storage (HSC50) computers; i.e. Hydra isn't counted as a separate system even though they'll be built this way. 2

The interconnect structure is going to have some effect:

Dave Thorpe, ML1-4/P11

- 1. The BI, new backplane, interconnect is basically just a UNIBUS replacement, but will help in being less unbounded and easier to test.
- 2. The CI, Computer Interconnect, is really just a very high speed DECnet link - but may require testing as a large, Type VI. Large systems, will be built as combinations of Type V, PMK Kernel components (2080, Venus, 780, COMET) AND the HSC50 Computer for Mass Store with associated disks and tapes AND communications controllers (Mercury).
- 3. The NI is a high speed DECnet link. It will affect systems by:
 - a. Eliminating communication controller in systems thereby easing the pain of configuring you go through now. However, this will pop out somewhere else as it is necessary to interconnect to non-DEC systems and non-DEC links (current communication) by some standalone box.

SUBJECT: MANUFACTURING/ENGINEERING SEGMENTATION AND COUPLING. WHAT NEXT?

I got sort of a weak approval and support to pursue the thinking on segmentation that I gave at the OC Woods. Shel was to be a moderator/catalyst with Jack and I. Jack, Larry and I met on this once and given that Jack is moving toward a similar segmentation, we agreed to be supportive on two fronts:

- 1

Bill Hanson is most likely to do the Systems Job, now spread across the request commit, cpu, general manufacturing and FAT organizations. As such, our various systems by size managers will work on how to best align and support. Given that there are 3 of them, then one of us will act as a focal point. Now, Pete Van Roekens is working on a list of our Joint problems and how to best connect (clear, still seperated, but aligned, and have knowledge of what the other group is and what their processes are).

We are siving a clear message to Thompson and Holman to get their collective acts together with respect to what belongs in manufacturing engineering (processes, CAM), in engineering (products and technology and CAD), and what is in the specific product engineering groups and what belongs in the plants.

Have read Jack's notes on how he is proposing to organize and find there is really pretty good agreement of what I proposed as a segmentation (really aligned with product).

Smith proposed a	ors.	Bell model
Components		Semiconductors and Physical Interconnect
Mass store		Mass store divison with direct sales
Terminals		Terminals and terminal based systems with direct sales A group to handle comm and networks
Systems	Small,	medium and larse groups
Staff and brain	trust	
Far East		
External mfs.		

Fundamentally, I support the two changes and want us to push forward on the coupling of terminals and terminals based systems among manufacturing, engineering and appropriate parts of the marketing groups. Also, I would hope that they can be encouraged to relocate out of NE in the long term, starting a co-location soon as a method of encouraging coupling and segmentation.

There is also a question of helping take some of the load off

manufacturing so that we can get organized to be a high volume supplier. Currently, we have a number of low volume and special products and the Field Service plant mixed in with the high Given that the Japanese are coming, I think it volume part. is essential to at least put these in a seperate categorie so that the Components, Terminals, Mass Storage and Systems groups are pure, lean and mean! Traditionally, these other efforts simply take time (say only 5 or 10%) that might better be used in longer range planning. Perhaps a better writing of CSS and TFL charters to handle this in what could also be a total business context is certainly appropriate. Given that Stan is so pro-division, then having him manage these as divisions might make sense (take over some of the low volume graphics, PDP-8 systems, and other low volume specials). We ought to look at what the best way to manufacture the PL low volume products too! (Perhaps a place in a FAT plant or even outside).

In this same regard, I am now scared to death of what we are doing/planning in a total manufacturing plant (1/4 billion in '81) because I don't understand how it relates to what we expect our revenue stream to be in the future. I know that we plan our ensineering on the basis of future projections of revenue and it appears: OUR PROJECTIONS AND ACTUAL SHIPS ARE COMPLETELY MISALIGNED. That is, we spend ensineering on the basis of projections and we actually ship other things! But this is minor compared to what we induce in manufacturing. Therefore, it is essential to spend the summer trying to get this segmentation because, let's face it the manufacturing plant and inventory is really where the money goes and we had better align by group to segment this, rather than getting this one bis ball of wax once a year that we have no understanding of in terms of how capacity and business are related.

There were a series of questions that the OC members had which I would like to set from Steve's minutes. These ought to be incorporated in a working document which explores this set of chanses. Jack has done an excellent job of listing what he wants to preserve and what some of the goals are for what he is proposeing. Likewise, I want to state goals, constraints, and what we are trying to maximize/minimize (the objective function) in any kind of change. Currently, I hope to spend time on this in August.

Shel, I think you could also help here.

Do we want to proceed?

Subject: Mentors: Can They (help) Solve Our Training Problem?

To:	Gary Jewks/John Meyer	Date:	18 JAN	77	
		From:	Gordon	Bell	
CC:	OOD	Dept:	OOD		
	Dave Brauer	Loc.:	ML12-1	Ext.:	2236
	Ed Roberts				
	Ed Schein	F/U 2/	1		

The model used to identify certain types of individuals in R&D organizations probably applies to other organizations and disciplines. The categories are simply a mapping of other, very complex attributes about the person. The particular categories are in reality the set of values for a single attribute which we might call a person's basic function within an organization.

The functions are also identical to those of man-made information processing systems, i.e., computers.

Note, the pure information processing functions within a computer are:

- L links; pure information transmission channels
- T transducers; (doesn't change information) only encoding
- M memory; stores information
- S switches; a variable set of links
- K control; finite state machines which take input, and evoke control outputs
- P processing (takes information, an algorithm) and creates new information)
- C computer; combination of above

Therefore, the categories mapped into the above are:

Gatekeepers - basically input T's, M's; and some S's Knowledge sources - basically M's and some S's (are these Gatekeepers) Creative Scientists - P possibly with lots of M Entrepeneur - basically output T and S (back to group) Sponsor - T/L + M (to amplify another component) Project Management - K Troops - any function (usually L's, S's, T's with some small M)

Can we use mentors/sponsors to significantly decrease introduction time? Without the trauma?

THE ORGANIZATION

GENERAL CHARACTERISTICS OF SPECIFIC GROUPS

Table gp shows some of the groups, together with their characteristics. Nearly all the people, including sales and marketing people, have hardware or software engineering backgrounds. Hamming once characterized an engineer as one who achieves his goal by first turning to science, failing that he turns to mathematical tools, and finally failing mathematics, he turns to the seat of his pants. I similarly characterize us as--given a goal of going to the moon: as a last resort we are willing to climb on top of one another to form a bridge. I believe engineering is the most highly disciplined of any profession because the non-human interpretable goals and measures are crisp and clear. We are simply measured in terms of whether some arbitrary object works correctly, and judgement is relatively outside the human realm. Nearly all other disciplines have fuzzy goal sets and success is judged by others. There are an infinite number of ways some true measure of success (or failure) can be interpreted opposite (i.e., there are an infinity of excuses).

In the various other disciplines within the organization, people get rewards in shorter (or longer as the case of architecture) time scales, and who want more ambiguity in their goals, and more freedom (less discipline) in their work. Probably the most free (and creative) group of engineers are salesmen, because of the short time scale and range of inventions they must deal with (e.g. why their product is better; why their proposal didn't meet a customer's deadline).

All of these disciplines deal in fundamental design and these activities will be presented below, followed by a section on the nature of architecture, both generally and as it related to the PDP-11.

The final section will discuss the interaction of the various groups and their affect on the computers DEC has produced.

DESIGN AND DESIGN(ERS)

Although we like to believe that design is a highly analytic, totally rationale discipline, the contrary often seems true. With computer design and implementation there is an ever abundance of new materials and techniques to draw from, hence, there are many designs and much innovation. On the other hand, there are many techniques which most engineers/designers are rarely aware of because of their short term focus and there is a reluctance of using parts that are not available vis a vis the trade publications. Also, due to large numbers of interfaces, risk is to be avoided in materials and techniques because the exogenous organizations supply enough risk.

Nearly all design activities i believe are characterized by a specific design ideology. While I believe a good designer may switch between the ideologies, it appears to be rare. A safer style of management is to not tempt fate by asking a designer to change ideology.

The three types of design are based on economical and performance considerations, and the nature of this tradeoff is shown in Figure DS. Note, that one starts at 0 cost and performance, proceeds to add cost, to achieve a base (minimum level of functionality). At this point, certain minimum goals are met: for the computer, it is simply that there is program counter, and the simplest arithmetic operations can be carried out. It is easy to show (since the days of the Turing machine) that only 1 or 2 instructions are required, and from these, any program can be written. From this minimal point, performance increases very rapidly in a step fashion (to be described later) for quite sometime (due to fixed overhead of memories, cabinets, power, etc.) to point of inflection where the а cost-effective solution is found. At this point. performance continues to increase until another point where the performance is maximized. At this point, continuing implies physical constraints are exceeded, and the machine becomes unbuildable, hence, has no performance.

Note, that there are actually a family of these curves for various levels of functionality (e.g. 4K memory machines). That is, to obtain the functionality of very large scale computer, which is beyond the cost limit of the curves, is infeasible.

Similarly, to obtain only the performance of a small computer from a much larger computer, than there it has a similar shape, but the base cost is much greater, and the limits are greater. A relationship of this type also cost holds for a given computer as it is modified over its lifetime: that is, we don't design a single point in the cost/performance phase plot, but rather a given computer takes on many configurations of over its liftime: and from a manufacturer's viewpoint, a given model is available in a set configuration. Thus, the design problem is to understand the distribution of configurations.

In this section, however, we are only interested in how the designer perceives the design task in the space (context) of Figure DS.

There is a general tendency of all designers to n+1 (i.e., incrementally add to the design forever). No design is so complete, that a redesign based on the knowledge of the design, can't improve it; hence, there is a natural tendency to always change the design to look for a more optimum point and provide more functionality for the set of components. The tendency to n-1 the design is less severe, i.e., take out one more component, while keeping the functionality.

In programming design this has been observed on the PDP-8, since it is organized in pages of 128 words. As a result, programming is done in integral pages, with a program always fitting on a single page. One would expect that the programming cost would be higher; clearly the size of programs tends to be smaller on the PDP-8 due to the enforced paged discipline.

Now assuming the curve represents an ensemble of designs, then there are three design ideologies practiced by designers; and these correspond to the types of designs that we say have been implemented, given the technology in the technology section:

Building the mini(mal) computer, i.e., the least costly 1. design. Here, fortunately, there are design guidelines to help. A computer is packaged on a set of printed circuit boards, and each time one more is added, a certain overhead cost is incurred; while adding a part to the board is expensive, it is relatively cheap in (DEC'S boards are roughly comparison to the board. 8-1/2" x 15"--a hex, although they can be made in increments of 8-1/2" x 5". For processors, the increments are usually in terms of an integral number of hex boards to make the processor. Note, the various designs have been oriented to achieve a 1 board processor, and upon succeeding, then getting a complete computer on 1 board. The LSI 11 has a processor with 4K words of memory on a guad size (2/3 of hex) board. For minimal systems, designs, the packaging constraints provide the nicest design constraints. It is clear when success is achieved. In fact, note that we now clearly mark the beginning of the 4th generation as being the first time a processor is put on a single silicon die.

- Cost/effective design. This style of design is clearly 2. the most difficult, since there are no clear cut constraints. Since the size is usually not bound, and slight additions give great incremental gains in performance, the phenomenon of n+1'ing is ever present. Nearly all the mid-range designs are invariably larger than they set out to be initially ... and it's usually the right thing to do, from a total system standpoint. The n+1'ing occurs as the designers get into the details of the design and find it's more difficult than expected, or that there are slight perterbutions that provide more performance.
- 3. Maximum performance designs. These designs are the most interesting, but they always imply a significant risk, although the design is somewhat easier because the object is to provide the greatest performance, subject

to certain buildability constraints. One is building with a new technology, new techniques, or putting more together than ever before. The results are usually the same: the system is late; it costs more than expected; the performance is somewhat less than expected; and it is likely that no buildable design will result (the Ibblac IV is the most visible example). Semour Gray formerly of CDC, is the only designer who has consistently worked at this point (i.e. CDC 6600-7600 series). With very complex management techniques, a large team can work effectively (e.g. IBM'S large machines), but as a rule, the success of very large machines has been limited. The 11/45 (although significantly smaller than existing large machines) was an exception to the above rules...in a sense some luck was involved in choosing the TTL/SCHOTTKY technology, right at the point it would be barely available (a year earlier project start would not have allowed the machine to be built). On the other hand, the trick in deciding on projects is to select lucky people.

ARCHITECTURE

A key design discipline is computer architecture. While architecture was initially defined by Brooks et al as the machine as seen by the user, devoid of its physical characteristics, I believe this is too limited. Architecture includes the definition of the ISP together with the various PMS structures that will be built. connotation Unfortunately, there is а of computer as being like conventional architecture. architecture. There are similarities, however. Computer architecture has more basic principles to build from, and the designs can be better measured; nevertheless, the computer architect, like the conventional architect can easily suffer from violating cost), constraints (e.g., given usually specifving unbuildable designs, and being non-guantitative in machine measurement and using beauty, esthetics, and symmetry to describe a machine.

The two usual problems of architecture: inexperience and second-systemitis. The first problem is simply a resources problem: are there people available, what are their backgrounds, can а small group work effectively on architectural definitions? Perhaps most important is the principal, that no matter who the architect, the design should be clearly understood by at least one person.

Second-systemitis is the phenomenon of defining a system on the basis of past system history. Invariably, the system solves all past problems...bordering on the unbuildable. The most classic case of this is the IBM Stretch, being the second system after the 704/709. Even today, Stretch remains the most elaborate machine (except the still non-functional CDC STAR) in terms of the vastness of the data-types and operations it performs.

One can observe second systemitis on the various PDP-8 designs. Each succeeding design solved the most recent problems of the previous design; of course, the remembered problems were that the previous design could not be built in small configurations. Oscillatory designs large or every other PDP-8 design was larger than the resulted: last; and the alternate ensuing design reduced the previous design. Observe: 8 (relatively large); 8/S (very small and slow); 8/I (large); 8/L (cost-reduced 8/L); 8/E (large); 8/(F,M) (small); and 8/A (small) breaking the oscillatory tradition...however, it is being extended now to compensate for smallness.

Some of the PDP-11 architecture was initially carried out by a single individual (HMcF) together with the author supplying various design principles at Carnegie-Mellon University. Two of the useful ideas: the UNIBUS, and the use of general registers in a substantially more general fashion (e.g. as stack pointers) came out of earlier work by the author (GB) at CMU and were described in COMPUTER STRUCTURES (Bell and Newell, 1971). During the detailed design emelioration, 2 persons (HMcF, and RC) carried the architectural specifications.

Although the architectural activity of the 11/20 proceeded in parallel with the implementation, there was less interaction than in previous DEC designs whereby the first implementation and architecture were carried out by one person. As a result, a slight penalty is paid to build subsequent designs, especially vis a vis microprogramming.

As the various models began to be built outside the original PDp-11/20 group, nearly all architectural control (RC) disappeared, and the architecture was managed by a number of disjoint people, and design resided with no one person! A similar loss of control occurred in the design of the peripherals after the basic design; the result challenges the most clever programmer.

THE ORGANIZATIONAL ENVIRONMENT FOR THE PDP-11

DEC oscillates between a market- and product-orientated organization. Because the growth rate has been 30-40% per Year, the organization has to constantly change because the number of people doubles every two years (i.e. 1/3 of the People have been with the organization less than a year).

At the time of the PDP-11 designs, DEC was organized along product line groups; each was a tightly integrated group of marketing and engineering people responsible for specifying and designing products. There has always been centralized selling and manufacturing. Now there is also centralized engineering, with marketing being applications- and
customer+oriented rather than machine oriented (i.e. product oriented).

Therefore, in the 1967 timescale, there were actually 5 tightly integrated (non-destructable) groups:

- PDP-10, building large scale timeshared machines, and fundamentally a different company with little interaction with other products; the 10 group was the strongest and understood architectural control, but had no interest except implementing higher performance machines.
- 2. PDP-15 (18-bit) a relatively strong group at the time and the obvious place to build a 16-bit machine, especially in the mid range; the PDP-15 series was constant cost and tended to be optimized for cost performance; however, any alternative design would clearly compete with the PDP-15. The engineering leadership changed from implementation to implementation, and there was no understanding of architectural continuity.
- 3. PDP-8, was a tight group and had a fair understanding of architecture; however, the tightness inhibited communication outside. It was oriented to minimal cost designs, occassionally producing high performance products (e.g., TSS/8 for timesharing, and fast floating point).

- 4. PDP-8/S, actually just a single point, by a single individual and outside the PDP-8 grouping; an attempt to get a much lower cost PDP-8 and "show" the PDP-8 engineers how it should be done. (Fairly unsuccessful since it gave up too much performance).
- 5. LINC-8, a group oriented to building machines which were sold into the biomedical and laboratory market--the strongest engineering group outside PDP-10. These machines were really the most "systems-orineted" with a good human interface I/O (a CRT), special analog front ends, and a file system based on DECtape. The LINC came from MIT'S Lincoln Laboratory, hence, there was conflict as to whether we should continue to build it or to switch software to the PDP-8. Note, the compromizes over time were to build the PDP-8 into the instruction set as the PDP-12.

Therefore, at the time, there was little or no understanding about architecture because of inexperience. Also, there was no notion of architecture for a range of products.

The first designs for 16-bit computers came from a group placed under the PDP-15 management (a marketeer, without an engineering background). It was called PDP-X, and did include a range. As a range architecture, it was better thought out than the later PDP-11, but didn't have the innovative aspects. Unfortunately, the group which came from the tightly integrated PDP-8, and from the PDP-9 (which Was late into production) had some credibility, and competence, but was intimidating. The group also managed to convince everyone that the machine was potentially as complex as the PDP-10 (which it wasn't); but since no one Wanted another large computer disconnected from the main business, it was a sure suicide. The marketing management had no understanding of the machine. Since the people involved in this design may have simultaneously designed Data General, it's unclear what would have happened had it not peen shut off.

As the PDP-X project folded and the DCM (for Desk Calculator Machine for security) project started up, nearly everyone was some what paranoid, since Data General had been formed and was competing with a much scaled down 16-bit computer. Hence, there was no communication with the other groups as to just what the machine would be. Although the Product Line Manager for the PDP-8 (and a former engineer) had the responsibility this time, the project manager was a mathematician/programmer. The results were disasterous, because there was no operation as a team, no notion of architecture, and range. None of the people on the project are with DEC today. After a period of inactivity, another manager (RC) was put in charge to get something out. He had managed the PDP=8 group after it had migrated to the PDP=X project. Work proceeded for several months based on the DCM and we had a project review of DCM at CARNEGLE=MELLON in ----The design was presented to me and I had invited Bill Wulf. The DCM review took only a few minutes, since We coulan't get interested in the design. Aside from a general dullness, and feeling that it was too little too late to compete, it was difficult to program (especially by compilers). However, it's benchmark results were good. (It had been tuned to the benchmarks, hence couldn't do anything else well.) One of the designers (HMcF) brought along the kernel of an alternative, which turned out to be the PDP-ii. We worked on the design all weekend, and phoned the manager on Sunday night to recommend that we switch to the basic 11 design.

At this point, there were reviews to ameliorate the design, and each suggestion, in effect, amounted to an n+1; the implementation was proceeding in parallel (JO'L) and since the logic design was conventional sequential, consisting of boards, and to be cost-effective it number of. was Also, the design Was difficult to tradeoff extensions. constrained with boards and ideas held over from the DCM. (The only safe way to design a range is simultaneously do both high and low end designs.) I spent the summer at DEC, trying to free up op code space, and increasing (n+1) ing) the UNIBUS bandwidth (with an extra set of address lines), and outlining alternative models (see figure which we have to find). This formed the basis of plans for subsequent machines.

The advent of large, read-only memories, made possible the

various follow-on designs to the 11/20. Figure "Models" sketches the cost of various models versus time, with lines of consistent performance. This very clearly shows the design styles (ideologies). The 11/40 design was started right after the 11/20, although it was the last tocome on the market (the low and high end had higher priority to get into production as they extended the market). Both the 11/04 and 11/45 design groups went through extensive buy in processes, they came into the 11 by first proposing as alternative designs. In the case of the 11/45, a larger, 11-like 18-bit machine was proposed by the 15 group; and later, the linc engineering group proposed an alternative design which was subset compatible at the symbolic program level. As the groups considered the software ramifications, buy-in was rapid. The large 11-like machine was fairly traumatic for the people involved made a very nice design As we see in the chart, (the PDP=K). the minimum cost-oriented group has two successors providing lower cost (yet higher performance); and same cost with the ability to have larger memories and perform better. Note both of these came from a backup strategy to the LSI-11. These come from larger read-only memories, and increased understanding of how to implement the 11.

The 11/70 is, of course, a natural follow on to extend the performance of the 11.

Table gp. Groups Characteristics

. . . .

	Computer Architects	Engineer/Designers (Implementators)	Programmers	Marketing	Sales
Time Horizon	historical (what's worked/failed); > 10 years into future	past implementations; current technology + $(0 \sim 4)$ years	current techniques, past (0_+2xears) (01 3 years))	6 months to few weeks	few days∼ few weeks
Activity	predict future technol- ocy (materials) to build from; get goals framework; predicates implementable designs over time. Knows how to adapt.	select technology and techniques to build from to achieve goals	takes ISP and translates to other machines as dictated by a market/use contract	takes general machines, con- verts into specific uses either with words or with special software, interfaces, etc.	takes products in stock and sells to a customer mens in a given region.

CALL FOR PAPERS

Fourth Annual Computer Architecture Symposium

23-25 March 1977, College Park, Maryland

This is the fourth in a series of annual symposia devoted to the presentation and discussion of advances in computer architecture, sponsored by the IEEE Computer Society and the Association for Computing Machinery. Previously unpublished papers on the current state of art and theory of computer architecture are requested with emphasis on architectural decisions, cost-effectiveness, and integrated systems design. Among the topics relevant to this symposium are:

-Hardware/firmware architectural interactions
-Microcomputer system architecture
-Input/output architecture
-High-speed computers
-Multiprocessors
-Distributed processors
-Networks
-High-level language machines
-Architecture measurement and evaluation
-Hardware description languages
-Computer architecture education
-Hardware/operating system integrated design

-Special-purpose architectures

Authors are requested to submit five copies of a completed manuscript to Program Chairperson by 1 August 1976.

Course No. 401 COMPUTER ARCHITECTURE

DESCRIPTION

This course is designed for engineers, computer scientists, and data processing managers who need a better working knowledge of the principles of computer architecture. The course will include a review of the concepts of computer science. It will provide an in-depth coverage of the characteristics and design principles of input/output, arithmetic and control units, and their incorporation into the design of a special-purpose digital computer. There is no prerequisite for this course; however, a degree in engineering or computer science would be helpful.

TOPICAL OUTLINE

First Day

Introduction to computer systems Review of number systems and arithmetic opera-

tions Information coding and error control coding Logic functions, operations and implementation Basic logic units

Second Day

Introduction to computer architecture Addressing, formatting and sequencing Memories Input/output devices Channels Programming systems Assemblers, compilers and interpreters Multiprogramming and time sharing Microprogramming

Third Day

Arithmetic units Serial and parallel arithmetic, floating point arithmetic Memories: types and characteristics Input/output device characteristics Analog to digital and digital to analog conversion

Fourth Day

The control unit Distributed and centralized control Ward formats and instruction repertoire Instruction and operation sequencing Microprogram med control units

Fifth Day

Digital computer design Formatting Addressing and instruction set Arithmetic and logic units Control and input/output Timing

INSTRUCTORS

- Michael B. Feldman, Ph.D., is Assistant Professor of Engineering and Applied Science at George Washington University. He has taught computer science at the University of Pennsylvania and has served at the Educational Testing Service in Princeton, New Jersey, for four years as an in-house consultant for programmer and computer-room productivity improvement, compiler development, and interactive programming tools. He has recently returned from Europe where he was acting as Staff Consultant to the President of the Samson Automation Service Centre in the Netherlands, Holland's oldest and largest independent computer service bureau and software house. Dr. Feldman's current research interests lie in the design of problem-oriented programming languages. He has designed and implemented such languages for experimentation with abstract sequential machines, specification of statistical analyses, and construction and scheduling of classical batch job streams.
- Hermann J. Helgert, Ph.D., Associate Professor of Engineering and Applied Science, GWU, has worked as a research engineer at Cornell Aeronautical Laboratory in Systems and Communication Theory and was a member of the electrical engineering faculty at Clemson University. Prior to joining GWU he spent two years as a Senior Resident Research Associate at NASA/Goddard Space Flight Center working on problems of source and channel coding for satellite communications systems. He has been a consultant to NASA, the Naval Weapons Laboratory, and Diebold Company and has published papers on information theory, communications, and coding.
- Arnold C. Meltzer, D.Sc., is Professor of Engineering and Applied Science at George Washington University and currently Chairman of the Department of Electrical Engineering and Computer Science. He is co-author of the text *Principles of Digital Computer Design*, Vol. I (1975) and currently writing Volume II. He was a Ford Foundation Faculty Fellow with IBM during 1970-71 and an NSF Faculty Fellow 1967-68. He is a member of IEEE and ACM. He has been a consultant on the design of large computer systems to several U.S.

government agencies and has published several papers in the field. His current interest is in the design of large telecommunication/data base systems.

Abd-elfattah M. Abd-alla, Ph.D., is Associate Professor of Engineering and Applied Science at George Washington University. Dr. Abd-alla, an Egyptian by birth, was awarded an M. S. in Electrical Engineering at Alexandria University, Egypt, in 1963, and a Ph.D. in computer science at the University of Maryland in 1969. He is the author of a number of publications on computer operations and design, and is the co-author, with Arnold C. Meltzer, of *Principles of Digital Computer Design* Vol. I (Vol. II is in preparation.)

FEE

The fee for the course is \$425. This includes lecture notes and supplies. Make checks and purchase orders payable to GWU, Continuing Engineering Education. Free parking is provided. Participants may delay payment until arrival.

MEALS AND HOUSING

Housing and meals are not provided. However, there is a wide variety of hotels, motels, and restaurants nearby. Information on available accommodations will be sent if requested.

LOCATION AND HOURS

Orientation will be at 8:15 a.m. on the first day; classes will meet from 8:30 a.m. to 4:15 p.m. daily in Room 641 of the new University Library, 2130 H Street, N.W. (corner of 22nd and H), Washington, D.C.

CERTIFICATE

Those attending the full course will receive a Certificate of Completion.

CONTINUING EDUCATION UNITS (CEU)

Continuing Education Units (3.0) will be awarded for the satisfactory completion of this course. Developed by a national task force, the CEU is a uniform unit of measurement for recording substantive noncredit learning in qualified continuing education programs. It provides a standardized means for business, industry, and government to measure inservice education. A permanent transferable record is maintained of CEUs awarded.

o i g i li a Mulle Pc.

March 22, 1976

Professor Thomas Kilburn Department of Computer Science The University of Manchester M13 9PL Manchester, ENGLAND

Dear Professor Kilburn:

It was nice talking with you and Professors Sumner and Edwards...especially the issue you raised as to the utility of multiprocessors versus multicomputers for large programs. I discussed this with Allen Newell and would like to urge you to formulate this as a conjecture so that it can be considered more widely. My intepretation of your statement (poorly stated) is:

It is pointless to understand the design of a shared memory multiprocessor (e.g. 16) computer system for large, compute-bound programs because a program can be decomposed and executed in a multiple (e.g. 16) computer system which has a fairly simple intercommunication mechanism (e.g. high speed message oriented).

Furthermore, for a computation center environment encountering a range of jobs, the more loosely coupled system is preferred because there can be a static partitioning of functions, thus minimizing overhead.

This viewpoint is also reinforced because the large, compute-bound user gets little computing on a larger system, and hence he could run longer on a slower system.

It seems perhaps the crux of the issue may be on whether or not a user is permitted to utilize all of the processors or computers at a given time. If he can have them all, then it seems there is a significant problem involved with the decomposition so that it can run in parallel. Your main point was that there was not much parallelism that was easy to exploit, and hence when there was parallelism, problem parts are easy to assign to multiple machines.

DIGITAL EQUIPMENT CORPORATION, 146 MAIN STREET, MAYNARD, MASSACHUSETTS 01754 (617)897-5111 TWX: 710-347-0212 TELEX: 94-8457 Whether there is scientific interest seems to revolve around two aspects: the amount of parallelism in a problem, and the ease of exploiting it; and more pragmatically, the system costs including delay times to get the machines, design costs, performance, and costs of alternative processors.

I suspect we have radically different cost models, and these are the basics of whether there is a problem worth of study or not. My cost model is simple. People have been trained to program in a sequential fashion (e.g. FORTRAN) and there is a large base of programs. Doing anything to an operational program is prohibitive in cost. I also assume that there is much parallelism in most programs (e.g. the DO loop) and furthermore it is relatively easy to detect and be decomposed into programs for parallel execution on a number of processors which share a common memory. Computer design costs are very expensive, and the easiest way to get a machine that is 16 times the power of a smaller processor is to simply put 16 of the processors together...i.e. solve the performance need by production, not new designs. Furthermore, the very large processors are always about 3 years late. By backing off the design and providing only 1/2the power, one can get .5 X 3 CPU-years work before the later machines appear. Then at the 3 year time, a second processor is added which brings the machine up to full power. When you consider the added reliability, design costs, etc., then significantly more computing gets done. (As you can see, my biases are mainly toward instructions per month not instructions per second.) Whether we have a difference of opinion or whether i we are just working on different problems, may be a function of the shape of various costs curves, I suspect.

In returning here, I wrote down some problems interesting to me (and DEC) which might be of interest to your students:

It seems to me, we urgently need a program which can build and analyze a data flow graph of arbitrary programs. Such a program would take an arbitrary program, determine the amount of parallelism it has, and given some assumptions about fork, join and operator times, determine the speed up with various parallel processing schemes. The multicomputer versus multiprocessor question is really a difference in the grain size (i.e. how much computing is done between synchronization points and the cost to partition the problem).

Just as students learn to program by reading other person s programs, it might be useful to do some comparitive design analysis by critiqueing the various 10 or so implementations of our PDP-II models.

Page 2

I'm intrigued as to how much it would cost to make higher speed versions of the PDP-11. You have skills there we don't have for high performance machines. In doing this, how would multiples of these compare with the performance and cost of MU5?

How would one evolve the PDP 11 to increase the memory address space and still provide compatibility?

We would be interested in seeing variant models of the PDP-11 such that there is no storage, transmission or processing of information that is unchecked.Furthermore there would be automatic checking and reporting of many failures. What would this design goal do to the cost, serviceability and performance of various models?

Again, I enjoyed last Tuesday's visit with you and the other members of the Manchester faculty. If you're in the U.S., I hope you'll visit us.

· Sincerely yours,

CARL SER

Gordon Bell Vice President, Engineering Professor, Computer Science Carnegie-Mellon University (on leave)

Interoffice Memo

To: Dick Clayton Malcolm Johnston Ralph Platz Larry Portner

...

Digital

Date: 16 AUG 76 From: Gordon Bell Dept: 00D Loc.: ML12-1 Ext.: 2236

Subject: CIS - Surely we can make decisions more easily (and better) than this!

This is a draft. Please comment on it and whether it should be circulated. I prologue here with about 3/4" x 8 1/2" x 11" of paper, containing over 40 documents, including only 1 firm, detailed proposal which have been written over the last 6 months (about 1/2 this last month). This is probably only 1/2 the documents and represents only a small fraction of the work. There must have been 800 person-hours of meetings, perhaps 1 or 2 person-years of work in the projects on proposing something, and many person-years of background by people who have implemented operators already.

Having personally spent several hours in meetings being asked to approve something from groups usually 6+ people who have about the same, limited knowledge about the design as myself (I've called in more informed people in all cases), I'm somewhat frustrated because:

0. No Top Down Goals

My Problem. It's clear now: In the current range/set of machines DEC must have hardware to win with!

1. No General Market/Language Direction

The process really points out the abysmal performance in marketing by a lack of language needs definition in the business marketplace. (The only worse performance was by the engineering groups with uncreative responses to this non-definition.) In essence the instability occurs because we aren't clear on the need/use in APL, BASIC, COBOL, DIBOL, FORTRAN, MUMPS, and RPG for the various price ranges for all time. Ideally, we want high performance for all languages over all price ranges (all machines) for all time. This will ultimately lead us to supporting all data-types in hardware if we allow things to evolve. Hardware support of Fortran by the ll models is an example with no plan but evolving to: no support, EAE(on 11/20); and then simultaneous FPP, EIS, and FIS support. While one can say this is really dumb (particularly since the best compiler only supports FPP), it may be shown to be cost-effective or timely...and it illustrates the capability of macros to support almost any hardware.

2. Evaluation Criteria Missing

One person said we should do strategy k+1 (of n where k << n) for marketing (not technical) reasons. (We're currently doing strategy k+1). His statement, designed to sell the strategy without question was totally vacuuous. Everything we do is for marketing reasons--but can't we be more specific? Of the pile, only 1 or 2 pieces addressed the criteria for selection. None explicitly address long term, strategic market need. Based on the inputs from the implementors of Dibol, it's easy to ask whether adding these data-types will increase performance; aren't we interpretor bound and (there are no compilers involved)? It should be noted that adding these data-types is substantially more complex than Fortran, since computation, file and memory storage, and i/o conversion is involved. Hence the mix will drastically effect the performance (Fortran benchmarks just compute on numbers, usually).

3. Negligible Number of Alternatives Generated

The alternatives really were bad, incomplete and limited. Too early there was a convergence to 3 alternatives, only 1 of which appears to be documented enough to judge. Of the pile, only one memo was a proposal detailed enough to discuss (ironically the second document I have, dated 1/27/76.) It has been accepted, somewhat modified as the Dibol Instruction Set for the LSI-11. I doubt if the proposal for a new data-type can come from any more than 3 people (and preferrably 2 persons) -- the output by a larger group is nil. Ironically all the LSI-11 hardware Dibol work has been by 3 persons (I believe). My hunch is that our market strategy of grab what falls into our lab and be in all markets will take us into the support of at least all the languages mentioned above. Thus, all data-types currently known will be recognized by either software or hardware, and the decision as to the specific hardware support (on a given machine for a given language) will evolve. We must ask do we let it evolve in a natural way, on a demand basis, or do we assume it will happen and define a framework (or policy) so that the software and hardware architecture can evolve with less hassle? (In other words let's stop fighting and sit back and enjoy it ... and lead in cost/performance having the right support for the data-types a language needs, rather than forcing the programmers to use something else...and then going to slow interpreters because they say it doesn't matter since the data-types aren't interpreted (this chicken/egg argument costs a factor of 10 or 20) in speed.

Note, on LSI-11 the string instructions take about 500 words (\$20 cost), the zoned or leading separate about 500 words (\$20), and packed decimal about \$20. The costs for other machines are probably about the same. If we had space, putting them all in might be best, but on the other hand, will any language but Dibol ever be used on the LSI-11?

4. Undefined Process - Hence the Mob Scene

separators as a single data-type.

The whole process was too people and too paper intensive with meetings and opinions, which seem to have no underlying basis, and thus result in unstable recommendations (since there is no consistent evaluation criteria).

More disturbing in the meetings, is the mistrust, and hence the need for the mass of misinformed people to enter the fray simply to vote. Many of the people I talked with knew we must have data-type X, but don't know what a data-type is, nor have any idea of the implementation cost or resulting performance. Surely, whether one is an individual contributor or a manager, and whether part of an engineering group or a marketing group, as individuals we must be smart enough to insist that the process be fundamentally good, and hence allow us to do what we do well--not participate in a free for all and rendering the idiotic, redundant statements we do. (It's clear to me we are very fat as a company with many heat generators and only a few light generators.) It doesn't bother me to see the one shot suggestions or comments (it's part of the DEC Bill of Rights), it's the part-time experts who appear to meet, discuss, with what I see as no new information, and then go away frustrated to what must be a job, somewhere. Surely, they're not just professional meeting goers?

Another frustration is that there appears to be much orthogonality in the list of people working on and deciding on these designs. It appears to be like a big game which anyone can walk by, get a few memos, comment on, leave and then come back later. I only see a few people who have used their time effectively based on either technical or problem solving performance or being smart enough to stay away from it.

5. Better Engineering Management Needed

This activity just has to reflect our universally poor management. This mob fills the vacuum of a line management function in hardware and software engineering which should gather inputs about need, and then keep ahead with the right products which will keep us ahead in the marketplace (by having low cost, benchmark winning hardware and software). The line architectural function which recommends the hardware-software tradeoff is missing, distributed ` or abdicated.

In short we have to lead in both software and hardware...not defend!

Summary

- 0. Overall
 - a. What is problem? (see attached tables)
 - b. What are alternatives?

c. Cost/performance for each?

1. Market

- a. What languages are in use now and likely to be in future for each range of machines?
- b. What performance is needed?
- c. What are the benchmarks in terms of files, computation and conversion?

2. Software

- a. What are the representations the languages require together with their operators? the conversions among data-types?
- b. What exists now?
- c. How is data transferred among machines, languages and files?
- d. What are levels of support desired by hardware?
- e. (When) do we need descriptors?

3. Hardware

- a. What is performance and cost for various data-types/opeartors? additional ones?
- b. What are constraints for existing and new machines?
- c. What basic methods? Unique data-type as languages dictate? Conversion to binary (1 data type) for each language need?

Interaction Among Various Structures

ł I Hardware Software ----- Language ----- Application = Implementation Implementation Need=calc. (use (microwords/ (runtime def. (data-type frequencies) of data⊶op) declaration/ logic it i hardware) operators) 1 1 Files (storage/----! conversion) <---Hardware----___> [What can be built for given constraints: size, \$, speed?] <---->Software----> [What is best representation of data as dictated by: language, mem-size, operation time, compatability? <-----Market----> [What languages, now, future, compatibility, benchmarks, need for

speed]

The Design Process

See figure attached. How do we identify and install processes early enough?

Range of Alternatives in Increasing Degree of Hardware Support

0. Storage representation only.

1. + move op. data-type (high % use)

2a. + conversion to another data-type
 (to perform operations)

2b. + comparisons (for logicals)

- 3. + higher frequency ops. (+, -, some conversion for array access)
- Complete set of opeartors for high utilization
- Complete set of operators for each + conversion
- Descriptor based data-type with conversion [all hardware support for 0.]

Epilogue

Although this long (somewhat redundant) monologue may appear to indicate a frustration, the experience has been invaluable to me as an observer in gaining understanding about problem-solving processes and working with and identifying a few truly competent people. Let's use this base (case study) to significantly increase our productivity (i.e., one competent person could have formulated, generated the alternatives, and evaluated them in either the elapsed time or certainly 1/10 the expended time of this mob) and lower frustration.

I hope the commercial instruction set data-types problem is defined and under control.

Interoffice Memo

Subject: <u>CENTRAL ENGINEERING CHANGES</u>

To:	Operations Committee		Date:	22 MAR	77	
	Product Line Managers		From:	Gordon	Bell	
	Engineering Managers	•	Dept:	OOD	· .	
			Loc.:	ML12-1	Ext.:	2236

Over the past year, it has become apparent that the organizational structure in Central Engineering needs to be modified to meet the general corporate growth and improve our ability to meet customer and product development needs. In reviewing this problem, the following goals were defined:

- 1. improve product and strategy alternatives for Marketing Committee approval;
- 2. improve interface relationships with Product Lines;
- 3. improve financial, control, planning and administrative system;
- 4. improve performance against schedule commitments; and
- 5. improve focus on longer range, fundamental engineering strategy issues.

Based on these goals we are restructuring Engineering. The following changes will take place over the next few months and be completed by the start of FY'78. The task to date has been centered at the overall group restructuring. As specific operational decisions are made, they will be communicated through Group Managers.

- 1. Bob Puffer will assume responsibility for Central Engineering Administration (including Personnel, Planning, Finance, Control and Engineering Services).
- 2. I will bring Tape and Disk Groups together as a Mass Storage Group under my direction.
- 3. Dick Clayton will assume management responsibility for the Terminals group and the Power and Packaging group.

Subject: Central Engineering Changes

- 4. Larry Portner will formalize a significant overhaul of the present "Red Book" planning process between the Marketing Committee, Product Lines and Central Engineering. The goals of this change are to have:
 - . mostly system and product focus;
 - . cleaner interfaces with the Product Lines and Marketing Committee;
 - . better marrying of customer and engineerings expectations and reality;
 - . the right community of interest between engineering and product lines;
 - . documented plans with visible control; and
 - . overall less hassle through better segmentation.
- 5. Refocus Corporate Engineering Management (my staff).

Operational Issues

- . delegate more decision making latitude to the line Vice Presidents; and
- . provide greater administrative support and build an administrative system to support in future growth.

Engineering Strategy Issues

We will concentrate attention on the long term direction for growth and success of DEC's engineering activities. This will encompass: strategy, direction and organization. The parts include:

- . highlight long term/short term investment trade-offs for Marketing Committee decision making;
- . technologies and advanced development;
- . longer term product and program (e.g., RAMP) strategies; and
- . organizational planning and development.

lopies to OOD for Woods + ret _____ Napt

SUMMARY OF SPACE STRATEGIES

The following is a summary of the space strategies submitted by the Operations Committee members. The details of these strategies are included in the individual Operations Committee members sections following this summary.

GORDON BELL

- Maintain System Engineering, VAX, Central R&D, Central Standards, Administration, and a portion of Unibus Systems and Software Subsystems in the Mill.
- Locate Disk, Tape and Small Storage, & SDC with manufacturing.
- Locate Terminals, Small Systems, Commercial Software, Scientific and Industrial Software, and a portion of Unibus Systems and Software Subsystems with the Product Lines.
- Locate Hardware Services, and Software Services with user groups.

AL BERTOCCHI

- Maintain direct reports and Corporate HDQ groups in greater Maynard.
- Relocate service groups with F&A users and eventually relocate Revenue Accounting, Accounts Payable, Employee Expense Reports and Payroll.

WIN HINDLE

- Maintain LCG in Marlboro.
- Maintain Corporate Personnel, OEM, LDP, IPG, EPG and John Holman and his staff in greater Maynard.
- Locate CSS U.S. in Merrimack (East) and Santa Ana.

TED JOHNSON

- Maintain Corporate Sales and Services, NORAM management, Corporate Promotions, GIA, and Sales Training management in Maynard.
- Locate Sales and Services "Clusters" in "Mini-Maynards" with Marketing and Development groups.
- Locate Customer Education outside greater Maynard (Boylston or other).
- Maintain Field Service Logistics Operations in Woburn.

ANDY KNOWLES

- Locate DCG and specific Central Engineering groups in common facility near Maynard, i.e. Eastern Massachusetts/ Southern New Hampshire.
- Maintain DCG warehouse in Marlboro area.
- Locate a DCG warehouse in Phoenix and Europe.

KEN OLSEN

 Maintain office and staff in 12-1 and eventually occupy 12-B and Building 10.

STAN OLSEN

 Locate all Commercial Product Groups in Merrimack, N.H. including those groups currently in Maynard, Nashua and Hudson, N.H.

Gordon

Subject: Moving Parts of Engineering to New Hampshire (Some Alternatives)

To 00D Oleh Kostetsky Date: 9 SEP 76 From Gordon Bell Dept: 00D Loc.: ML12-1 Ext.: 2236

CC: OC Jim Bell Dave Brauer Al Pfyffer

Some thoughts for your perusal and comment.

Oleh, Bob and I are going to put together the 5-year organizational plan (organization, people, function, place (space)-who, what, where) for OOD).

Oleh will get the space and size numbers for OOD groups together and we'll examine the alternatives (seeing what they imply). A schema for representing the alternatives in terms of the intercommunication within engineering is given in the first figure. It permits the moves to be considered in terms of the interactions.

The first section posits general principles which I'd very much like your reaction to. We should attempt to get agreement on the principles (goals and constraints) and then specific moves (designs) will fall out.

The second section shows some alternatives. I'd like to get some more alternatives, their numbers, and then tabularize the pros and cons to select one.

General Principles

- 0. Maynard place to decentralize from. Eventually, may only be:
 - a. Overall PMS, ISP, Network Lanugages, Architectural Standards.
 - b. Standards storage. (Co-locate with user)
 - c. Central R&D with tracking of all Advanced Development which co-locates with products.
 - d. Central Library.
 - e. Central Product Review and Product Accounting.
 - f. FS RAI Engineering Techniques and Document Standards.
 - g. EDP and Product Monitoring Project tool development
 - h. Basic power emission, package design and standards.

i. Systems management. (systen Jesty / performer.

Subject: Moving Parts of Engineering to New Hampshire (Some Alternatives)

- 1. Since integration of FS with hardware drastically affects maintenance costs, all groups should supply space for appropriate FS (RA1) people. All groups should supply space for documentation.
- Specialized, market-pull products should be developed with the market group.
 - a. Applications and Application Libraries.
 - b. Market-related languages (BASIC?, COBOL, DB1S DIBOL, FORTRAN FOCAL, RPG).
- 3 Operating systems and hardware co-location because:
 - a. Continued tradeoff of software into hardware.
 - b. Diagnostics and handlers are essentially operating systems/hardware and ES tradeoffs.
 - c. By placing Operating Systems with Business or Scientific Group might insure that there will be no commonality of Operating Systems across markets.
- 4. Technology push components should tend to be developed near factories with the process:
 - a Printing mechanisms not the user interface part.
 - b. Disk platters, and transducers.
 - c. Tape transducers.
 - d. Semiconductor processing.
 - e. Board fabrication and logic testing.
- 5. Final level product packaging power, logic, functional specs, etc. are basically technical push and will be with development groups.
 - a. This implies there is support from LSI, packaging and power.
 - b. Memories could split-up and locate a part with each hardware group. As cpu becomes even more memory intensive, the need is great to know how to build memory hierarchy (MOS/CCD or MOS/Bubbles) which are highly cpu dependent.
- 6. Men techical push/market pull coincide, they could be co-located.
 - a. Krypton. (problem: all groups Sci/Bus use these and co-location may jeopardize commonality).
 - b. VT/LA.
 - c. Communication Systems (Hardware and Software).

Subject Moving Parts of Engineering to New Hampshire (Some Alternatives)

- 7. In addition to the Business and Scientific System focii, we would do well to consider a communications switching systems focus:
 - a. All communications hardware and operating systems support.
 - b Multiplexors and remote concentrators with line printers, etc. end-use products...across all markets.
 - c. Packet-switched systems...due to near term inevitability.
 - d. DECNET and its conventions.
 - e Terminal support.

f. Not terminals, as they are relatively independent of the switching.

Some Alternatives

- 1. Consider the base products as shown in the first figure. The intercommunication among the various products can now be shown. Use this base and postulate your own plan!
- 2. The current plan has the Business Products, Terminals, and LSI-11 Boards narket-only going.
- 3. Nove Terminals + Communications. This would place engineering near marketing in both cases.
- 4. Nove Terminals and Low End (LSI-11 boards and/or Krypton) This would insure a more business orientation for Krypton It's not necessary (perhaps not even desirable) to have the LSI-11 boards and Krypton together. Communications could also move when necessary.
- 5 Move VAX and Communications since VAX will be the main system growth. It will more naturally solve the 32-bit problem in the scientific market hence, could get a more business orientation.

MINUTES OF BERMUDA WOODS MEETING FEBRUARY 10, 11, 12, 1974

Jarden Bell FEB 18 10

Those present: Ken Olsen, Win Hindle, Ted Johnson, Andy Knowles, Gordon Bell, Al Bertocchi, Pete Kaufmann

Secretary:

1.

CONCLUSIONS

A. ENGINEERING -- The Central Engineering organization was agreed to as follows:

implementation steps are as follows:

John Fisher

1. Win will discuss with Clayton.

- 2. Win, Gordon and Andy will announce to Puffer, Portner and Peters.
- 3. Gordon will pull together group to define the next level of the organization.
- 4. Changes will be gradually implemented and completed by July 1, 1974.
- B. MARKETING -- Approved the startup of Andy's Component Business and a change in the VP responsibility for OEM, Industrial and LDP. The changes will be made in the following steps:
 - Andy will begin a low-key startup of his "new Product Group" in Marlboro. He will finalize his plans for (1) organization, (2) marketing, (3) budget, (4) name, (5) logistics, (6) engineering and (7) people.

Minutes of Bermuda Woods Meeting February 10, 11, 12, 1974

MARKETING (continued)

- 2. Responsibility for OEM, LDP and Industrial will be transferred to Win and completed by July 1, 1974. The division of the 11/45 group will also be accomplished by July 1, 1974.
- 3. The February Board of Directors meeting will consider the appointment of new VPs and/or 0.C. members.
- 4. Group VPs will emphasize strengthening the Product Line organizations in the context of creating strong Marketing Divisions focused towards <u>one</u> of the primary DEC businesses of:

Components

OEM

End-User

Government (some day)

C. Discussion of the 1975 growth strategy was deferred to the March Budget meeting.

A summary of the detailed discussions follows:

2. ENGINEERING

The following points were made regarding the Central Engineering organization headed by Gordon:

- J. Everybody wants Gordon to sound the alarm if administrating the large group becomes a significant distraction.
- 2. Gordon will have a small group for new ideas using creative guys like Stockebrand and Kronenberg.
- 3. After considerable discussion directed toward Clayton heading up the entire Systems Group, it was agreed that Peters heading up a Small Systems Group would be a better utilization of our talents.

2 -

Minutes of Bermuda Woods Meeting February 10, 11, 12, 1974

ENGINEERING (continued)

- 4. Gordon and his people will define the detailed organization in the context of the suggested organization outlined in Appendix 1. (They will also suggest changes required by Peters' resignation.)
- 5. With the exception of Tom's Terminal, no change was made to the Engineering now being done in the Product Lines. Ken asked Gordon to continue to look at Centralizing things like A/D, RTs and COMM.
- The Finance Department should cut the business by Products and Systems as well as Markets to measure the effectiveness of the Central Engineering Group.
- 7. Modified algorithms for Organization and Funding are attached as Appendix 2.

3. COMPONENTS BUSINESS

Approval of Andy's Components Business finalizes cutting the business by terms as well as by Markets, i.e., Components, OEM and End-User. The following points were made:

- 1. Andy will be selling the same products as the rest of the Company but without services or software.
- His goals will be to (1) get our share of the components business, and (2) keep end-user product lines (offering end-user services) out of the components business.
- 3. Ted anticipates difficulty in maintaining a field split between Components, OEM and End-user terms, and when he works this through he will discuss it with the O.C. Andy will use 66K FT² in the Marlboro Tower, split evenly between warehouse and administrative space for Marketing, Finance and Engineering. By mid-1976 he expects to have a 15K FT² warehouse and depot in the West and Mid-West.
- 4. Each of the VPs agreed to assist Andy in staffing his proposed organization outlined in Appendix 3.

5. Andy listed the following areas for which he will develop detailed plans:

- A. Organization
 - a) Plan
 - b) Schedule
 - c) Execution
 - d) Report to 0.C.

POSSIBLE ENGINEERING ORGANIZATION

Bell 2/74

G. Bell 2/7/74 BURNING ISSUES ENGINEERING RE-ORGANIZATION SHOULD ADDRESS Interface to markets; interface to manufacturing. 1. Low end computer products. 2. Including, terminals as low end products. n machi-System products versus collection of options that happen at random. 3. 4. Better integration of hardware/software. 5. Compatibility. Also 11/11; 10/11; (nets) 6. Reliability and producibility.) 7. LSI--getting there. Semiconductor memories phasing and opportunities for faster machines. 8. Product range-funding. 9. 10. By structuring a particular way, will we build obsolete products according to organization--thereby missing opportunities. Optinization of products. Lacking fundamental coord between. hard soft System Damb thing, Hassb content (cleaner) this over 1 2 de 14 with Percetterel. optimized

Ground Rules

- 1. Guidance for product planning and product management.
- Advisory--generally chaired by 1 or more responsible line manager for product(s).
- Consists of Engineer, Mfg. (2x2), Service, Sales, and using Product Line customers.
- Manager responsible for profit; 2 wide open 1/2, 1, or 2 day Woods Meetings; a 3 year plan which is a maximum of 5 1/2 months obsolete; and a short plan for yearly product review.

Components (options)

RYD

+ RT Muner Lang Juner

ORGANIZATIONAL AND TERRITORIAL ISSUES

-3- Software - hardware organition.

- Packaging, power supplies, power distribution, shipping containers, environmental testing, metals engineering, design and mfg. of metals. Also, individual product group packaging. Strong central group with dotted line reporting to product, seems the way to go. We still can gain by more centrality. Less need to bend sheet metal is way to go.
- Design automation. Central group (Vrablik) is beginning to function for PC boards, back panels, automatic insertion and data base. Splinters for Register Transfer simulation (programming), Logic Simulation (Gale), and Mask Generation (Gale-LSI). (Purguotus) and (Mg) lov 6 group.
- 3. LSI-Mfg.--Lemaire, Cudmore (Zeh-Amann), Teicher, Gale--doing lots on ad hoc basis, but really moving toward a strategy. Peters charter to do engineering; Lemaire to get chips and circuits.
- 4. Research. None with hardware building. Many groups prototype, almost all ideas get built. Little fundamental technology.
- 5. New products we are unable to identify now. Will this organization lock us in by structure and funding to miss new opportunities? Eg., scan graphics, voice response, OCR, desk calculators, computers packaged in terminals (smart terminals), floppy.
- 6. Terminals. Are these merely the form for our future low end computer packages? How do we sell them anyway? VT5-, VT5-Lab graphics, VT5-for typesetting, GT4-, (sell only: VT15, VT14, VT8), VT20 and VT20 follow-on, RT0-, RT90, CSS color, LA-. Issues: will new coordinating committee encourage/reduce overlap? How do we move to better products? Would some centrality allow us to hire a fundamentalist in human factors engineering, planning, and TV techniques? Is there any way to do it worse? We still only lose \$250K/year in miss-products.
- 7. Memory. Move to adopt combined Mfg., Engineering, and Testing as per Bell-Kaufmann suggestion to Operations Committee memo?
- 8. Manufacturing and its Engineering. Assembly line design. How much centrality? Can these plans be reviewed by engineers who must interface to them? Component group?
- 9. Process Engineering. How can we stimulate development in automation for:

Modules fabrication and testing FA&T Peripherals Power Supplies Memories

10. Synchronization with PDP-10. Customers for cabinets, power supplies, disks, terminals, tapes, software. Must interface to standards for networks and languages. What is interface to 11/85...would 10-land kill it?

PROGRESS ON TOP-10 BOARD OF DIRECTOR'S PROBLEMS (published Aug. 1973)

- 1. ll-programming--substantial progress on compatibility.
- 2. LSI--no progress, need strategist-implementer.

-5-

- 3. Floppy--doing. Moving to manufacturing drive.
- 4. RP disks--Doing. Maybe shouldn't as it impacts engineering funding.
- 5. Networks and multiprocessors--nets OK. Multiprocessors not OK.
- 6. High level languages--commitment to use BLISS; FOCAL in some diagnostics.
- 7. Small and Large-11's--are segmenting. Have started 11 development.moving.
- 8. 8's and 11's--should we support both? Yes, seems to be answer--is probably right answer.
- 9. Consoles, packaging--move to common scheme for low-end. Concern and staffing is occurring.
- 10. Terminal types-progress to adopt VTXY.
- 11. Manufacturing-Engineering Committee is helping, Pete is more aggressive to build engineering expertise.

GB 11/75

1 interoffice memorandum d | i | g | i | t | a | 1 | 1 1 1 1 1 Subject: OOD Goals (and Objectives) FY80 [and how we did against them] Date: 8/7/79 [edited 8/26/80] To: Ken Olsen From: Gordon Bell/Larry Portner CC: OOD, OC Dept: OOD Loc: ML12-1/A51 Ext: 223-2236/2471 Grade (Bell/Portner) Goal - (8/7/79)Performance (8/16/80) 0. B- Build products as per Red Book (show 3 years and 5 years till end of life) C and corporate strategy. B- Manage according to budget and schedule. Poor schedule performance. Spent over budget, but understand why. D Operations organization installed and helping. There's good plans. We have a fundamentally new and consistent phase planning process. A- Stability, yet excitement. Turnover is relatively low. Projects are stable, aggressive and exciting. We decommited TRAX (g'-) and 11/70mP (A-). 1. A- System orientation: make Small, Medium and Large Systems independent and B+ the planning centers. New system configurations reflect this. B Have really clear charters and contracts by site, with only minimum B+ central support and inter-dependence. Power and packaging are coupled, -physical interconnect proceeding. The systems centers will work with Mass Storage, Semiconductors to the B technologies they need for their viability. A Mass storage product manager is resident and coupled. С There is a process to couple users to producers of MOS and Bipolar. , 2. B- Significantly couple with the product line engineering groups where joint products and planning is essential for avoiding replication, insuring compatibility and leveraging base investment. We sit on the group product line staffs!

3.

B+ Start to move to applications, versus base systems focus as per Product Strategy on the basis of measured funding by level of integration. OFIS program for WPS and EMS is a major accomplishment. Groups and components are going on the Personal Vax.

4.

A- Continue to improve EBOD, PMC, product marketing support through PMMMM.
A EBOD is working. Programs for product marketing in place.
B- Aggressively support marketing organization and improve coupling.
B+ Coupling through staffs. Doing product positioning vs market.
B- Use the contract process for product decisions and pricing. This has been established. Showed by example, through Venus, of a comprehensive plan which includes all aspects of the product's life!
F Review product profitability against the plans.
5. A- Build a first class architecture identification, specification, and A control function such that the Corporate Product Strategy can be implemented. All groups exist, with connection to Technical Director. A Make the Network Interconnect charter of Medium Systems a key interface and control organization. Happened very well! We have the structures coming along to build and interconnect computers for the next 10+ years. B- Establish Small Systems and Terminals architecture. Being exercised and tested now. 6. B+ Keep our people and make DEC an exciting place to work and have high morale. see 1 B- Get a human resources plan (HRP) so that we are able to have a resevoir of technical and managerial talent. The Individual Development Planning part of the HRP is working. C- Have available, almost trained replacement managers for two senior levels of engineering. This review hasn't happened yet. 7. B+ Get metrics for all products and processes permitting a better method of C resource allocation based both on position and strategic need (market). Several Redbooks (sets of plans) have been formed; including CAD and Performance Analysis. An Interconnect Task Force has started to work on this critical area. Very high quality product positioning data and benchmarks are available in nearly every area. 8. B- Review for all our groups at least annually. We had a 2 day major program review and set up a review cycle. We Ahave started to review every group based on the Beige Books. 9. F Review our ability to produce reliable, quality software in a timely, cost-effective fashion. Did not do. Intend to use the review process above. However. we do have a clear plan, together with some advanced development. 10. B+ Review our R and D position by getting advanced development in C development groups. The RAD Committee reviews. Nearly every group has an A/D function! The R and D group is now R and more research oriented. B+ Get plans for 80's show possible 85 products. The systems in the mid and high end have been layed out till 90. С We need this for semis, disks, terminals and low end. Ok till 85. 11. B+ Increase overall effectiveness by managing the Engineering and C Manufacturing interdependency.

> Had first joint meeting! Strong intent, less progress. Have common issues list and people working on them. Have proposed a segmentation and coupling which must me consistent with Manufacturing reorganization.

SUBJ: Individual Goals, Objectives and Priorities

We will be spending one day in the July, August, and September WOODS discussing each others individual goals, objectives, and priorities. In the past two years, we have found this takes about one and one-half to two hours per person and each year we ended up saying it was a good process that was well worth the time.

The format will be very simple; each of us should first hand out a brief statement of our FY80 goals, objectives, and priorities and briefly review how we did (about one-half hour). Then each of us should hand out a statement of goals, objectives, and priorities for the coming year and lead a discussion with the group for one to one and one-half hours. The values of these discussions has been in the interaction that takes place.

For the July WOODS, Jack Shields, Al, Stan, and Bill Long should be prepared for their review and discussion.

In August, Ted, Andy, Steve, and Shel should be reviewed during one day of the WOODS,

Then in the September WOODS, Win, Julius, Bill Thompson, and Jack Smith should be reviewed.

Gordon will be scheduled for the October WOODS,

SUBJECT: INDIVIDUAL PERFORMANCE REVIEWS - FY80

As was done last year, Ken would like to meet with each of his direct reports for an hour or so to review FY80 performance asainst soals. Ken also has asked that Win participate in each review, as he did last year.

We'll work out a schedule for the meetings beginning in mid-August. In the meantime, you should do whatever is necessary to be prepared to discuss FY80 results. You will not need to submit a memorandum as you did last year.

INTEROFFICE MEMO

Date: 31 JUL 80 From: Ken Olsen Dept: Administration MS: ML10-2/A50 Ext: 2301

SUBJ: YEARLY JOB REVIEW

mn

As we go through the reviews in the next month, at the start of each presentation I'd like to have each individual make a list of five or six of the most important things that he feels the company is doing or has to do. Next, I'd like to have him list what his contribution is to these things - first of all, as part of his job description and secondly as a member of the Operations Committee.

I think these should be part of our written comments and part of the discussion. Those who have already given their reviews should add written answers to these questions.

I'm going to recommend to the Board of Directors that pay raises to the Operations Committee not be issued until all of these reviews are done. This may delay things a little but it will also put pressure on us to get them done quickly.

Subject: My Role In The Six Most Important Things the Company Has to Do!

To:	Ken Olsen		Date:	8/16/80		
			From:	Gordon Bell	1	
cc:	Operations	Committee	Dept:	OOD		
	OOD		Loc:	ML12-1/A51	Ext:	223-2236

- HAVE REALLY GREAT PRODUCTS (Fundamentally responsible) continuing: support the plan in Red and Beige Books evolution: get quick resolution on VT/PDT/Gigi for low end revolution: Interconnect and The Personal VAX recover/lead: get organization and products for the office! build fundamental technology base: physical interconnect, semis and disks
- UNDERSTANDING THE TRUE COMPETITION: Japan, IBM, and new micro-based systems Get the Japan competitive analysis and understanding-action groups going. Have a "Stratton" around Manfacturing and Engineering that targets these competitors. Get disk, semi, terminal and system M/E pairs to Japan! Evaluate the inevitable competition based on the emerging lines of very fast, large address-space microprocessors enabling higher performance/cost.
- STREAMLINE OUR ORGANIZATION to have a single stage, FAT-less product flow to halve the inventory and double the turns based on point of mfg. and field merge. Improve product quality, minimize system configurations, pare old products and discourage mutations, provide a system to permit salesman to order "legal" systems (those specified, tested to work and can be built), and get the right product/plant/organizational structure which supports the manufacturing reorganization.

BETTER ORGANIZATION by location, coupling and decoupling (Operations Committee? responsibility. Offer a framework (cauldron) and plan. Encourage the troops to make (bubble up) a proposal.) Have proposed a framework and got support to meet with Jack and Shel. We are organizing engineering to be better aligned with various business units based on technology (manufacturing) and market (product lines). Support a terminals and terminals based systems grouping. Improve Mass Storage coupling by review of plans. Significantly improve semiconductor M/E grouping. Align systems appropriately with new Mfg. organization.

IMPROVE ADMINISTRATIVE SYSTEMS: Order processing and product flow control seem to require a different structure. (Lend encouragement and moral support)

TOTAL RESOURCES (CAPITAL/EXPENSES, PEOPLE, SPACE, AND COMPUTERS) BASED MANAGEMENT FOR PRODUCTS versus engineering expense-based resource allocation EBOD is to do this review. Couple and check the Manufacturing and Engineering plans. Do a detailed example for Mass Storage to understand.

GB1.S6.5

Glossary

A/D- Advanced Development- a group within each development group whose goal is to show feasibility by building working breadboards

Beige Book- all project plans and resources for each group for next 3 years CAD- Computer Aided Design. Covers use of computers to engineer computers and includes every aspect from simulation to analysis and design

Computer Engineering- book by Bell, McNamara and Mudge for detailed definintion Computer System Component- the part, we call an option, from which a Computer

- System is built. The components types are: CPU's (which is actually the processor, primary memory, and controllers for other options), secondary memories (currently disks), tertiary memories (currently tapes), printing and CRT-based terminals, and special hardware options. Other components include the software, cables, and all documentation.
- EBOD- Engineering Board of Directors (subset of Marketing Committee responsible for reviewing and approving product development strategy
- EMS- Electronic Mail System for creating, storing and sending messages to all persons who are subscribers to the system.
- FAT- Final Assembly & Test- manufacturing site where various parts from high volume are collected, inventoried and assembled to fill customer orders
- Field merge- computer system component or option that is part of a larger system that the customer buys. The option or product is capable of being built in a high volume manufacturing plant, shipped to the customer and connected to the systems by Field Service (and eventually by the customer) with the expectation that the combined system will work. This also denotes method of manufacturing.
- GIGI- a product designed for Education marketplace which is a CRT controller packaged in a keyboard. The next version of the prouduct includes the processor and primary memory.

Individual Development Plan- a career plan made by individual with manager Interconnect Task Force- group to assess position in Physical Interconnect

(see below) and recommend how we improve it. Encompasses the technology, capabilities of CAD and of plants to manufacture the technology

Large Systems Development Group- responsible for systems selling for over \$250K M/E- manufacturing and engineering

Mass Storage Group- products used for secondary and tertiary memories.

Includes disks, tapes, magnetic bubbles, video recorders

- Mid and high end disks- disks for mid and large systems
- Mid Range Systems Development Group- responsible for systems in range \$16K-\$250K
- Network Interconnect- the means by which all our terminals and computer systems are connected together. This includes the network structure called Ethernet which we are jointly specifying with Intel and Xerox.
- OFIS- a set of projects including word processing and electronic mail for use in offices
- PDT- a small system that packages processor, primary memory, secondary memory, terminal and communications options together in a co-ordinated fashion
- Performance Analysis Group- responsible for measuring and understanding why products perform the way they do
- Personal VAX- a VAX computer oriented to a single user which has a 1000 line, high resolution CRT
- Physical Interconnect- the scheme by which Integrated Circuits are coupled together. This area covers chip substrate carriers, printed circuit boards, backplanes, and cabling. See Computer Engineering book for details.

PMC- Product Manager's Committee- Si Lyle, Product Marketing Manager, staff PMMMM- Si Lyle, Product Marketing Manager for all products Point of Manufacture- a manufacturing organizational structure which Jack Smith is implementing that eliminates FAT plants such that various computer system components are built in high volume plants and field merged Product Strategy- same as Red Book Red Book- development strategy with past and future products for Product Lines Research- group mostly concentrated in a single group. Oriented to several focussed projects, such as building a secure computer system, a personal computer system or a Database system that can be queried via forms. Projects are not oriented to making a particular product, but oriented to getting results or building an experimental breadboard by which a product can be made. Small Systems and Terminals Engineering- all products up to \$16K selling price Stratton- an annual, three day meeting of 250+ representatives of all the engineering groups. Plans and direction are presented for many of the groups. Video teleconferencing was used to extend audience by 250. System (or Computer System)- an assemblage or combination of parts (or computer system components which we call options) forming a unitary whole. Note this is the standard dictionary definition as applied to computers. Technical Director- part of Office of Engineering. Responsible for Performance Analysis, Architecture, Standards and Advanced Development. TRAX- a transaction processing system for commercial market. Very good specifications, but poor implementation. Delivered only 12 and withdrew it. VAX- our 32-bit computer architecture, also used to mean the total system we have introduced as the VAX-11/Model 780 running the Virtual Memory System software (VMS) Venus- follow on VAX Model 780 that will sell for about \$250K VT100- a CRT-based terminal that connects to a computer system WPS- a Word Processing System 11/70mP- a multiprocessor computer system based on the 11/70 designed to provide both performance and higher reliability and availability. Described in Computer Engineering book. A superb product, but came in behind schedule. Sales on the VAX picked up and as a result we decided not to market it.

OOD Goals (and Objectives) FY81

- Build products as per Beige Book (shows 3 years and project end 0. of life). Update and clarify the corporate strategy in the Red Book and rate us. Manage according to budget and schedule.
- 1. Continue to build a systems organization around products by size, and have clear alignment with various manufacturing sites, focusing on problems. Streamline Engineering (reinforce accountability and facilitate decision making) in terms of Product Development Engineering (PDE) and Office of Engineering (OE) such that more people are working in PDE with less matrixing. The OE will manage by formal review approval and inspection versus hassle. Build a single packaging/power/physical interconnect (PPPI) organization with a clear charter which is understood by product groups and plants.
- 2. Increase the percentage of software spending for applications and increase the number and quality of groups in this area.
- Keep our people and make an exciting environment with high 3. morale. Get a human resource plan that is well understood within organization. Have trained, replacement managers for two senior levels of enigneering. مر
- 4. Review all groups annually as per their Beige Books. Review selected programs as appropriate. Especially review our ability to design and build software systems.
- 5. Review past product performance against plan so that we can better understand resource allocation, especially consider induced investment and ability to manufacture in a timely fashion. Review new products in terms of total resources (expenses, capital, computers, space and people).
- 6. Increase overall effectiveness by managing the Manufacturing and Engineering interdependency. Cooperate in the Manufacturing reorganization to assure the best coupling for planning and execution (product introduction).
- 7. Establish a long term strategic frame work to guide our investments in technologies, products, and related processes.

O O D C H A R T E R

- Formulate, propose, and implement the Corporate product strategy.
- Provide the organizational framework for maintaining an effective Engineering activity within DEC, consistent with the goals and philosophies of the organizations.
- Maintain a work environment and leadership image that will continue to attract and retain the high caliber, innovative people necessary for our growth and success.
- Ensure a competitive product posture for DEC.
- Own those technologies key to our success.
- Build products to meet needs of Marketing, while maintaining technology driven product innovation.
- Minimize technical risk by programs for advanced development and technology tracking.
- Provide visibility and review for non-Central Engineering activities.
- Provide product marketing services to the product lines.
- Establish and maintain required coupling with Manufacturing and Service organizations.
- Understand industry and competitive behavior.
- Minimize project risk by maintaining appropriate project and program management and control systems.
- Manage the balance between predictability, innovation, individual initiative, and control.

Larry Portner September 1979

LP2/33

GOALS

Subject: OOD Goals (and Objectives)	FX80
To: Operations Committee	Date: 8/7/79
20. 00l	From: Gordon Bell/Larry Portner
	Loc: ML12-1/A51/ML12-1/T32 Ext: 2236/2471

- 0. Build products as per Red Book (show 3 years and 5 year till end of life) and Corporate Product Strategy. Manage according to budget and schedule. Stability, yet excitement.
- System orientation: make Small, Medium, and Large Systems independent and the planning centers. Have really clear charters and contracts by site, with only minimum central support and inter-dependence. The systems centers will work with Mass Storage, Semiconductors to get the technologies they need for their viability.
- 2. Significantly couple with the product line engineering groups where joint
 products and planning is essential for avoiding replication, insuring
 compatibility and leveraging base investment.
- 3. Start to move to applications, versus base systems focus as per Product Strategy on the basis of measured funding by level of integration.
 - Continue to improve EBOD, PMC, Product Marketing Support through P⁴M. Azgressively support marketing organization and improve coupling. Use the contract process for product decisions and pricing. Review product profitability against the plans.
- 5. Build a first class architecture identification, specification, and control function such that the Corporate Product Strategy can be implemented. Make the Interconnect charter of Medium Systems a key interface and control organization. Establish low end architecture.
- 5. Keep our people and make DEC an exciting place to work and have high morale. Get a human resources plan so that we are able to have a resevoir of technical and managerial talent. Have available, almost trained replacement managers for two senior levels of engineering.
- 7. Get metrics for all products and processes permitting a better method of resource allocation based both on position and strategic need (market).
- 8. Review for all our groups at least annually.
- 9. Review our ability to produce reliable, quality software in a timely, cost-effective basis.
- 10. Review our R and D position by getting advanced development in development groups. Get plans for 80's show possible 85 products.

Increase overall effectiveness by managing the Engineering and Manufacturing interdependency.

GB0004/27

8 | 1 | interoffice memorandum 1 t a ¦ đ 1 | Subject: OOD Goals FY79 and Performance Against Them as of 7/28/79 To: Operations Committee Date: 6/13/78; Updated: 7/28/79 Gordon Bell From: CC: OOD, Barry Burns OOD Dept: Loc: ML12-1/A51 Ext: 223-2236 ORIGINAL PERFORMANCE AGAINST GOAL Build products as per Red Book. Product Strategy and needs caused changes, else ok. Manage according to hudget and schedule. Underspent by 2M (indirectly causing slips) Hold organization together in face of lower growth (budget), and evolving market organizational changes. Organization, new people, Larry and charters feel very good now, despite changes. Turnover is still low. 1. Improve management process by clarifying organganization and organizational boundries. Major improvement this year. Next year will be better, Includes technical director function, Solid and necessary to get Strategy going. Other parts of organization are considering similar roles. communication engineering, Have it together finally under Demmer (Plowman). commercial engineering, Fauvre left, Daley is really good. Product position is improving rapidly (eg. Cobol, TRAX). CAD, Are finally getting there...still needs work. physical interconnections (PIC). OK, but still can improve in direction and coupling to systems groups and to manufacturing. small systems, Really great...have got it together. architecture, Very strong, and must be for our future. ciagnostics, Being decentralized, also strong central technology. microprogramming/microprocessor support. Finally we have a good group (Bill Segal). 2. More development dollars (from base systems) into applications in line with group product line strategies. Are holding base systems. Resisted many new base systems. Must move to more applications as per goal. Need measures to manage resources.

Subject: OOD Goals FY79 and Performance Against Them as of 7/28/79 G. Bell

3. work to make EBOD,

Feelings about EBOD were mixed. Si, Larry, and Andy are

committed to make it much better.

Marketing, and

VAX was moved to Tech. Prod. need to do this elsewhere. Long Range Planning more effective.

Finally have two year planning horizon...next year we must go to 5 years!

4. Get strategies and metrics for all products and processes with outside comparative data!

The RAD Committee has made this work quite well. Most areas have measures of goodness.

2

8<u>/10/79</u>

5. Make the Product Managers more effective.

The PM Committee formed and solved several problems in planning, systems definition, product introduction, and role definition. Si Lyle managing this should really make for an effective organization...we're ready.

 Focus processes and design factories for: LO (NEOS and by-out microprocessors) I/C,

Pretty good, note Fonz and future direction Mid (Bipolar and HMOS) I/C;

COMET, our first gate array work, had surprises. Hi (ECL and follow-on) I/C,

We depend on Notorola, our CAD looks good. Marvelous Module Making Machine - 4M (so as to reduce product cost turn around).

Didn't touch this one. Probably can't. DECnet moves into distributed processing (production versus craftspersons), and

Shipped Phase II. We lead, but IBM's moving up fast. Still want more technology here.

Software (implementation language, interface management, piece parts, portability, verification, and performance analysis/measurement).

Made progress in all parts, especially performance.

7. Establish some inter-group forum for team building across all of engineering (especially those in P/Ls). Communicate products and requirements so as to identify duplication and basis for future building.

We did not do this. It needs to be done and now I have much more support in CE and PL's (eg. Stan and Bruce) to improve next year.

Engineering management should understand products.

I feel better that they must and do.

 Formalize management, especially planning and review process for non-product part of OOD budget.

Tools and RAD are working very well. Will be more specific next year by area (eg. project management).

Manager and State States and share

9. Make Research and Advanced Development more effective. Excellent coupling to Small, some in Mid, little in

Large and Software. Finally people are seeing how to and why to build advanced development of their own.

10. Given that we can't excel in all products/technologies, make a statement as to just what we are good at and intend to dominate. <u>The Product Strategy came from this goal (and visits last summer to customers)</u>. The result is more focus in engineering.

Personal Goals., described after the fact

1. Make an everlasting organization which is composed of quite independent parts, several of which have to work together, independent of much energy from me.

> This is finally happening...or I don't see it isn't. The main gain is seeing several next generation people (10-20 years younger) to raise quality.

2. Make a substantial technical contribution and delay technical obsolescence as long as possible. (Know where I am obsolete!) The temptation is always to define and assign.

The strategy took much energy. There are little things, but I want to do more.

- 3. Build an interesting environment for understanding computing. Have encouraged Digital Press, am trying to get a hi quality museum with surrounding talks and papers so that our people can interact with some great people.
- 4. Stimulate basic research in computing. Served on NSF panel arguing experimental use of computers. Advise IRCAM (computers in music). Selective talks. NSF referee. On NAE nominating committee.
- 5. Understand a few business and engineering management issues. Visited Japan. Wrote and presented a paper on it internally, at Dartmouth conference on innovation, and at Harvard Japan study group that included Ambassador Reischauer (under Vern Alden's sponsorship).

GB:mjf

OOD GOALS FY 80 (GENERATED BY OOD) 8/2/79

Products and Plans

- 0. Build products as per Red Book and Corporate Product Strategy. Manage according to budget and schedule. Stability, yet excitement. (GB only)
- Ownership/Leadership by OOD to a clear, written Product Strategy, showing 3 year plans and projected end of life to 5 years, with a committed implementation plan and supported by underlying technical (technolgy)
 plans.
- Lead to get all Corporate Product Development plans explicit and aligned with important strategy dimensions (eg. quality, ease of use, compatibility, networking).
- 3. Understand how we are competitively measured in terms of total cost (to buy, service and operate) effectiveness and establish a strategy for positioning (whether leadership or not).

Systems Emphasis

- 4. Clear, unambiguous systems responsibility and focus with organizational simplicity and clout to execute.
- Explicitly understand, contribute to and support the base technologies of mass storage and semiconductors necessary for the effective systems.

Product Market and Quality

- 6. Be perceived as #1 by our customers in product quality and ease of use.
- 7. Be the most desireable alternative to IBM.
- 8. Be demonstratively and viably unique in the type of solutions we offer, recognizing that once we achieve leadership we will be imitatated.
- 9. Establish programs that contribute to ease of doing business with DEC.
- 10. Provide a strong Product Business focus. Use the contract process and review history of products.

Engineering Processes

- 11. Develop an understanding of the Design Processes for Technology, Tools, Processes and Competition.
- 12. Develop an R and D strategy for DEC in the 80's.
- . Identify and eliminate the barriers and hassles within our processes to enhance productivity.

GOALS FY 80 (GENERATED BY OOD) 8/2/79 Bell

Interfaces among all engineering, service and manufacturing

- 14. Increase DEC effectiveness by managing the interdependency between Engineering and Manufacturing.
- 15. Develop an joint goal sets with Customer Service Organization to enhance DEC effectiveness.

2

8/6/79

16. Establish a collaborative and supportive environment across the engineering organization. Concentrate on modelling this behavior within OOD.

Fersonnel and People

- 17. Establish and maintain a positive, "people oriented" environment.
- 18. Make the company feel good about engineering by demonstrating capability, responsiveness and performance.
- 19. Sponsor an environment that allows and encourages entrepeneurial and creative behavior.
- 20. Understand our future staffing need 3-5 years out and develop specific programs that address those needs.

A MANAGEMENT SYSTEM FOR CENTRAL ENGINEERING

• HAVE A STRATEGY.

٢

- HAVE STRATEGY MANAGER FOR EACH ELEMENT OF OOD STRATEGY.
- USE "CONTRACTS" TO DEFINE ORGANIZATIONAL ROLE, MEASURE ORGANIZATIONAL PERFORMANCE.
- IDENTIFY KEY PROGRAMS FOR SPECIAL ATTENTION.
- REQUIRE AND INSPECT RELEVANT PLANS

WORK PLANS

BUSINESS PLANS

OTHER

- INITIAL REVIEW FOR VIABILITY, INTERDEPENDENCY

- PROGRESS REVIEWS

 DEFINE EXCEPTION MANAGEMENT PROCESS FOR NORMAL ACTIVITIES.
 UNIFORM PROCEDURES AS/IF REQUIRED FOR SYNCHRONIZATION, INSPECTION.

INTEROFFICE MEMORANDUM

TO: Gordon Bell Larry Portner

DATE: 4/4/80 Fri 14:29:57 FROM: Dick Clayton DEPT: CSD EXT: 3-3638 LOC/MAIL STOP: ML12-2/E71

SUBJECT: Comments Relative to Personal Objectives, October 1979

- - -

PRODUCT

Tiny System (PDT 50) о A start has been made here primarily as a result of Gaubatz, Strauss, Miller and Floppy Group activities. The present market focuses on this system are extremely diffuse and still substantially below any acceptable budget cutoff lines.

0 LQP Strategy The strategy has been restated and refocused to include common architecture with line printers. Our only active product focus remains LA24 High Resolution Dot Matrix. Another activity is below the budget cutoff line. Serie 10P

0 Schedule Terminals' products were rescheduled and refocused coincidence with Bill Picott and Joe DeMarinis coming on board.

ORGANIZATION

Ο Terminals

> Picott, DeMarinis, and Haney have made major dents in the top levels of the Terminals' Organization. Bill and Gil have jointly installed a high quality major focus on external architecture as seen by Software via the activities of Tom McIntrye. The Advanced Development Manager for the Terminals Group is still needed to work the final issues of internal Terminal Architecture (especially around the LA200) and the interaction between the corporate communications activity and the Terminals communications activity.

- LA24 full-time manager
 Walt Tetschner is clearly doing that these days. Video Support
 Process is closed as planned.
- o Video Support Process closed as planned.

o Low End Technical Director

I have consciously backed off on this because of the evolving organization, both in respect to Semiconductors and Terminals. I have tried to avoid hardening the present CSD organization so we have maximum flexibility going into the future. Our rearrangements of georgraphic strategies is dragging beyond the time where this is workable.

 Southwest Printer Development
 This essentially was deferred to higher level processes of divisionalization, etc.

PROCESS

- 3 Strategic Planning Units We have clearly installed the three part CSD Organization to achieve this and have made tremendous progress in this direction. In general, I feel super good about the leadership that CSD has provided for SPU activity. The lack of support for all but Herb Shanzer's efforts has been a real frustration.
- o CSD Management Process I feel very good about this from an CSD internal point of view. The installation of a decentralized management process within the three groups has been achieved and the groups are executing effectively. In general the management process has been preceding the OOD level detail demands and this has caused some amount of rework, duplication and frustration. Ron Cadieux's work is becoming more visible.
- Quarterly "Business Focus"
 We have achieved good results in the Chips and Terminals area mostly because of identifiable customers and identifiable manufacturing. The system operation has move more slowly. The concept of group business focus is presently not supported at the OOD level. My sense is this is an issue which especially for Chips and Terminals I need, but from a corporate point of view we won't achieve this focus for another 2 or 3 years.

OTHER

- o Hudson II is happening.
- European Product Development Targets are guite well focused on Graphics and Communications. Jim Wade has been doing a good job here.
- o Clayton/Esten meetings have been happening.
- o We have made a fair amount of progress between Engineering and Manufacturing in all groups. The concept of cross coupled staff meetings was not implemented and does not seem appropriate at the moment. There is too much internal drive and focus in both manufacturing and engineering to achieve this in today's environment.
- BOD Presentation achieved my internal goal (bounded, ease of use, balance).
- o The European visit was moved out to mid May.
- o The European Beige Book has converged nicely and we seem to be long past the fall wars of C.S.S. and product planning is evil.

HUMAN RESOURCE PROCESS

- Replacement Strategies: Vary little overt visible work is done here because of the instability above in both the Semiconductor structure and Terminals Division structure questions.
- Olsen/Delagi Process: I don't perceive a very active role in this one. To the best of my knowledge that was worked by Gordon and Larry on several dimensions and I dont' recognize any access to the data during any of the diliberations. We did mobilize a fair amount of support to Bruce as it relates to finishing up the PDT and some of the Task Force work on the 1000 terminal.

ADDED ITEMS

- Hudson move replan. Hang in and keep pressing for Mill strategy before people start bailing.
- Semi Development Management
 The move change forces a more integrated management process by
 summer. Jim either must do it, or back away and let me solve it,
 Needs crisp boss focused on the trio (McGill, Metzer).
- o Semi Development Budget In October I didn't really expect our October EBOD Strategic request would drag into May (can't be right all the time).
- Terminals Funding
 Combination of OOD funding choice, Chalmers and Strauss leaving
 and Bill Picott coming on board make the environment very
 different; hence, a demand for increased management activity. It
 will work.
- o Fil Manufacturing Slip We have lost about 15 weeks relative to our expectations of last February-March. Outside source worked, but Worcester had lots of problems. Customer commitments not blown, but missed market opportunity. Will get about 12,000 Chip Sets instead of 20,000 by end of FY 80.
- Interconnect Management The corporate interconnet process seems marginally effective from a management viewpoint. It seems to demand more maturity and technical skill than readily available from Herb's group. The convergence and refocus of the program has caused much frustration BI, Q22, NI, etc. Expectations seem greatly beyond skills in many areas including CSD.

INTEROFFICE MEMORANDUM

TO: Gordon Bell Larry Portner DATE: October 22, 1979 FROM: Dick Clayton DEPT: CSD EXT: 3-3638 LOC/MAIL STOP: ML12-2/E71

SUBJECT: Personal Objectives

Gordon and Larry, these are primarily change issues at my level for which the detailed changes are essentially in place and moving. It specifically does not include various program, products, etc. which are within the responsibility of my managers and which are not "changing". Do you want that sort of thing too (I hope not). This list avoids things presently in the opportunity, search mode. Would you please feedback how you want to use this information, what is the risk reward process?

+----+ + digital+ INTEROFFICE MEMO

то:	Gordon [®] Bell/Larry Portner	Date: 1 MAY 80 From: Jim Cudmore Dept: LSI Admin. Ext.: 225 4487 MS: HL
		MS: HL

SUBJ: FOLLOW-UP ON FY '80 OPERATING OBJECTIVES FOR LSI GROUP

Below is a brief summary of our progress against the operating objectives established in Ql, FY '90, and attached is more detailed analysis of the specific Microproducts goals.

•	Program Management	-	have program managers for all
			planned programs (MCA hired, not on
			board) and PUSART, ICCS.
		-	ducing Q3 established business plans
			and formal monthly reports.

- during Q4 formed quarterly business plans review start.
- <u>major</u> staffing accomplished, function starting to be felt.
- Planning Process MOS Strategy Committee established and functioning several months - Roy Moffa, Chairman - primary focus on custom microproducts - need to shift to logic also.
 - BiPolar Strategy Committee established - first meeting 5/9 -Brian Croxon, Chairman representatives from MS, LCG, MSD, LSI - focus is planned on all BiPolar logic implementations (custom and std.).
 - we're started, but need to sharpen focus and accellerate progress.

FOLLOW-UP ON FY '80 OPERATING OBJECTIVES (Continued)

MICROPRODUCTS SPECIFIC

•	Achieve critical m	ass (build workforce) - have
		group. Advanced Development some
		progress, spectacular CAD success,
		no progress in MOS architecture
		(Gunther).
	-	 attrition rate was >20% in Q3 FY79, will be <2% for FY '30.
	-	- MPD population
		$\frac{77}{35} \frac{78}{92} \frac{79}{95} \frac{30}{148} \frac{31}{148}$
		College hires:
		20 39 (goal)
	-	- <u>same</u> management team as one year
	-	- "Piece of Rock" budgeting being
		implemented.
	Fast Turnaround -	- CX to do its own layout of 400 gate
		array in CX, in May.
		- CAD tools significantly improved -
		gate array manual published.
•	MOS Development	- HMOS will be in place for the chips
		Deing designed. - 2 migron - word late new test shin
		being done - Micro VAX tied to
		process - will make real progress in
		'81.
	BiPolar Development	- MOSAIC - we're late but technically
		strong and will be O.K.
		 interface with LCG going very well.
•	Structured Design	- CALMOS works but is poorly
		implemented.
		- have a dedicated project team and
		really pay off.
	Miscellaneous	- have initiated formal technical
-		training - visiting professor
		half-day seminars, VLSI design
		course, established technical
		library.
FOLLOW-UP ON FY '80 OPERATING OBJECTIVES, Continued:

ر

- SAGE II, TUMS, VOTE, now one team working well collaboratively.
- Co-location of MPD and chip's group of CSD in HL Phase II an important step to improve communications and workflow.

Overall, I'd give us a B for the year.

mm Attachments

GOAL - STABILIZE/BUILD WORK FORCE...CRITICAL MASS

OBJECTIVE

STATUS

MOS Circuit Design area - add three senior o A senior MOS Design Manager and four 0 designers have been hired. Two junior designers. level MOS designers joined us and two senior Bipolar designers are being retrained and have MOS design projects. o One device engineer has been added. In the Advance Development area need to 0 Requisition exist for yet two more, add two device engineers. which I expect to fill by end of Q4. o We have actually exceeded this goal by In the CAD area need to add two senior 0 hiring three senior software engineers software engineers in areas of circuit instead of two: simulation, DRC, (Design Rule Checking), Llanda Richardson joined in Sept. 79 and IV (Interconnect Verify). and became the Circuit Simulation Technical Leader. Len Dalton joined in Oct. 79 as the Layout Verification Tools Group Leader. Bob Hamilton joined in Nov. 79 as the Senior Software Engineer for IV Software. o To date we are unable to locate and hire In Systems and Logic Design area need to 0 two individuals with specific MOS Archiadd two MOS Architect/Logic Designers. tecture experience.

OBJECTIVE

• We did even better than our goal! Reduce attrition to 10% for PY 180 0 Annualized % for terminations from DEC (exclusive of internal transfers) is 2 1/2 %. Get to one year's visibility project Currently we are actively pursuing this 0 0 activity as part of the "Piece of the planning. (Absolutely necessary to retain Rock" proposal. A total summary of all a critical mass of senior people.) spending has been proposed by MPD to our Central Engineering users for FY81. (7,157K) We are now in the process of getting feedback from the OOD members and their managers. We are shooting to have the first cut feedback by the first week of May. However with budget at anticipation on the horizon this process of securing committed funds might drag longer.

GOAL - FAST TURNAROUND

OBJECTIVE

STATUS

- Be able to export the 200/400 gate array design system to engineering satellites by the end of FY'80.
- All post processing tools will be operable on DECsystem 10 by the end of January (DRC, IV, Plotting and P.G. tape generation).

• Mincut Placement will be completed by the end of January.

• Chariot routing will be complete by end of Q4 FY '80.

- Pass #1 export is currently scheduled for May 30 to Colorado with MINCUT as placer and IDEA as Router (Comet KLUDGE System). Phase 2 project plan is being developed and will include FINCUT as Placer and Chariot as the router.
- IV and Plotting Software were completed in March '80 and have been running successfully.
- DRC is just completed (Apr. '80) and is being installed at various sites. The delay was mainly due to obtaining a multi-site license for the software.
- PG Tape Generating Software (SHRINK) has been purchased from NCA. We found some problems during our test and acceptance. NCA has a commitment to fix the problems and deliver a good copy of the software in May '80.
- FINCUT (MCA MINCUT) prototype was completed in Feb.'80 and the production release was made in Apr. '80. FINCUT's results were so great that we decided to build PINCUT (PC board placement based on FINCUT Algorithms) PINCUT is expected to be ready in Jun. '80.
- We have made a tremendous progress on this challenging goal. We expect to have a full-blown prototype CHARIOT system, ready-to-be tried out on actual chips, in Jun '80. We expect to have a first production release in Dec '80.

GOAL - ORGANIZE STAFF FOR ADVANCED DEVELOPMENT

•

•

ŧ.

	OBJECTIVE	STATUS					
MOS	DEVELOPMENT						
HMO	S						
0	Operable HMOS CKT simulator by Feb.'80	0	Milestone was met, but with an initial version; this version is now being enhanced to better meet designers' needs.				
0	Process development/transfer will be completed by the end of FY '80.	0	Solidification of effort of starting up process in HL is needed; this issue is being worked. Process development effort @ WX appears to have been satisfactory. Objective is now to have process at HL satisfactory for prototyping of PUSART chip by 11/80. Characterization effort will continue when HL-processed lots become available.				
<u>2u</u>	NMOS						
O	Preliminary 2u process with poly resistors poly interconnects and refractory metal will have target design rules (unverified) by Q4 FT'80. VLSI VAX is the target product.	0	Several revision of target design rules have already been published. Process goal is now more aggressive; now aiming for 2 levels of aluminum interconnect with poly resistors on first level of poly.				
0	HMOS test chips modified for 2u structures in the Q4 FY'80 to Q1 FT'81 time frame.	O	Plan was changed; a totally new design for test chip is being done. Completion				

e. for test chip is being done. Completion date remains same. Work being done by Dobberpuhl. OBJECTIVE

 Preliminary circuit models and simulation tools (including short channel effects) available in Q2 FY'81.

- BIPOLAR DEVELOPMENT
- Transfer the MOSAIC I process into Hudson for MCA second sourcing and evolve it to a 2u feature-size process (MOSAIC II).
- o P.G. tape (of modified T04 test chip)
 should be completed by February FY'80.
 Major milestones without Motorola
 contract:
 - o Process recipe by Q2 of FY"81
 - o Conservative design rules by Q2 FY81
 - MOSAIC I performance design rules by Q1 FY'82.

- o On tract. This will be a larger task than initially expected. Production of <u>final</u> models targetted for Q4 FY'82. <u>80%</u> confidence models for SLIC should be available in Q3-Q4 FY81 time frame. A totally new model in the simulator may have to be developmed for the <u>final</u> result.
- Present goal is the first part of the objective only -- the development/ transfer of MOSAIC I 2u enhancement is expected to be done, but there is no project plan for this activity in FY81; 2u effort will commence in FY82. Adam Shepela is leading the MOSAIC I transfer/ development effort.
- Modified T04 was completed in Sept. FY80. A totally new test chip design will be completed in June 1980.
- o Have a compatible process recipe today.
- o On schedule.
- o Should have models for predicting circuit performance by Q1 FY82.

- o Get Motorola contract, so:
- o Immediate design rules with MOSAIC I performance
- o MCA II development begins much sooner.
- MCA chips begin ship from HL in Q2 FT'82.

- o Contract signing expect May 5, 1980.
- These three items are tied to contract signing, and are approximately on schedule; if anything, ahead of schedule if contract is signed before June 1.

GOAL - REAL STRUCTURED DESIGN GAMEPLAN

OBJECTIVE

STATUS

- Have a structured FTA design process using o HMOS technology which fits between COMET/MCA and VLSI VAX in level of integration, with LS performance, and development cost and time similar to COMET.
- Prototype process will be demonstrable
 by the end of FY''80 (DLART may be target chip)
 and ready for export to design satellites by
 mid-FT'81.
 - o 2-3K gate equivalents
 - o LS Prop speeds for average loading
 - 17 week chip development for \$50K (from logic complete and including masks).

At this point, we have determined that the ROADRUNNER approach is feasible. A major requirement was that the dye size using this approach, not exceed handcrafted dye sizes by more than 50%. Using DLART as a test design and HMOS standard cells optimized for Calmos, we have designed a chip that is between 100 and 112% the size of the DLART as designed by AMI using handcrafted design techniques. We were able to totally auto-place and auto-rout this chip in less than a day. However, we have run into major problems with Calmos and at this point are only able to determine that their algorithms are very useful, but we have many problems with the software itself; including improper handling of I/O, impractical number of cells supported with less than 500 cells, lack of sufficient and accurate user documentation, as well as a large number of software bugs. It is unlikely that we will be able to use Calmos within the next year as a tool to design IC's. A possible alternative we are currently pursuing, is the use of GAELIC and Calmos so that we can be able to place and rout large functional blocks by Dec. '80. This would include power and ground distribution. The strategy is to use Calmos to lay out large functional blocks and then use GAELIC to interconnect the PLA's, I/O cells, and the large functional blocks. We are currently rethinking the project schedule for ROADRUNNER in the light of the larger CAD effort than we originally expected. However, we still see a very positive outlook for this approach.

INTEROFFICE MEMORANDUM #J3.72

DATE: 11 OCT 79 FROM: Jim Cudmore DEPT: LSI Administration EXT: 223 2393 LOC/MAIL STOP: ML 1-5 E 30

SUBJ: ONE MORE TIME ON GOALS/OBJECTIVES FOR LSI GROUP IN FY '80

Attached find the LSI group goals - FY '80 (9/10/79) unchanged, and a fined set of operating objectives for those goals of primary perest/impact to the engineering community.

mm Attachments

LSI GROUP GOALS - FY '80

OVERALL

- Significantly improve visibility, understanding and interaction with other Mfg. and Eng. groups - vis a vis plans, status, performance.
- Form a partnership with the right Central Eng. organizations to jointly plan/drive the evolution of semiconductor logic families and technologies (MOS,MICROPROCESSORS/CSD, ECL/LCG, T₂L₈/MSD, RAM/MASS STORE)

MICROPRODUCTS

- Stabilize/build workforce to critical mass through better management and longer-term work loading plans.
- Make the fast turnaround (200, 400 gate array) a real service.
- Organize and staff for Advanced Development.
- Develop a real structured design gameplan (based on Micro-VAX).
- Have more programs (chips, CAD, etc.) that are successes on time and seen as winners.

MANUFACTURING

- Successfully manage start-up of the Hudson facility in a manner that provides a <u>solid</u> base for future operations.
- Improve operations in Worcester facility toward being significantly more predictable (costs, yields, cycle-times etc.) with major, improvement in prototype service.
 - Manage the organization and resources to meet the process development needs (HMOS, MOSAIC) more aggressively.

LSI GROUP GOALS - FY'80

ACQUISITION & TEST -

5

Establish a forecasting system for better coupling of component demand with product manufacturing needs.

- Increase effective test capacity to provide a safety "cushion" (more vendor test, smarter test, AQL etc.)
- Establish much longer-term commitments with vendors to insure future availability of components.
- Significantly improve delivery performance, average> 90% weekly by Q'4.

OPERATING OBJECTIVES FOR LST GROUP (Which primarily impact Engineering) These objectives relate one/one to the preceding LSI group goals (Overall and Microproducts.) GOAL Better visibility....understanding with....Eng. **Objectives** Establish program management to provide a total plan and single interface on major chip programs: P.M. assigned to LSI-11, F-11 now tt 11 " TINY 11 by mid Q2 ** 11 " J11 by end Q211 " COMET by November " MCA by beginning Q3 \$1 11 Simple, clear, reporting structure and info. flow by mid Q3 (= PERIODIC REPORTS ON WHAT IS) ISN'T HAPPENING GOAL A partnership with...Cent. Eng....jointly drive technology evolution - 115: - PROCESS PLANS CAEL Objectives Establish a joint planning process, improve - PLANS for Supply MFE/SUPPLIER relationships and confidence: PRODUCT TECH. Proposal on structure by end of Nov. Process in place in Q3 being debugged By end of Q4, "partners" agree this is a real success and did materially improve FY '81 plans. GOAL Stabilize/build work force...critical mass **Objectives** . MOS Circuit Design area - add three senior designers In the Advance Development area need to add two device engineers In the CAD area need to add two senior software engineers in areas of circuit simulation, DRC, (Design Rule Checking), and IV (Interconnect Verify). In Systems and Logic Design area need to add two MOS Architect/Logic Designers Reduce attrition to \leq 10% for FY '80. Get to one year's visibility project planning. (Absolutely necessary to retain a critical mass of senior people.)

Fast turnaround....

<u>Objectives</u>

- Be able to export the 200/400 gate array design system to engineering satellites by the end of FY '80
- All post processing tools will be operable on DECsystem 10 by the end of January (DRC, IV, Plotting and P.G. tape generation)
- . Mincut Placement will be completed by the end of January.
- Chariot routing will be complete by end of Q4 FY '80
- Organize staff for Advanced Development...

<u>Objectives</u> - MOS Development... HMOS:

- . Operable HMOS CKT simulator by Feb. '80
- Process development/transfer will be completed by the end of FY '80
- 2µ NMOS:
- Preliminary 2µ process with poly resistors, poly interconnects and refractory metal will have target design rules (unverified) by Q4 FY '80. VLSI VAX is the target product.
- . HMOS test chips modified for 2µ structures in the Q4 FY '80 to Q1 FY '81 timeframe.
- Preliminary circuit models and simulation tools (including short channel effects) available in Q2 FY '81.

Objectives - Bipolar Development ...

- . Transfer the MOSAIC I process into Hudson for MCA second sourcing and evolve it to a 2μ feature-size process (MOSAIC II).
 - P.G. tape (of modified TO4 test chip) should be completed by February FY '80. Major milestones without Motorola contract:
 - . Process recipe by Q2 of FY '81
 - Conservative design rules by Q2 FY '81
 - . MOSAIC I performance design rules by Q1 FY '82
 - . Get Motorola contract, so:

- Immediate design rules with MOSAIC I performance
- MCA II development begins much sooner
- MCA chips begin ship from Hudson Q2 FY '82

SUBJ: OPERATIONAL REVIEW

Gordon Bell

Larry Portner

L.

This is my evaluation of progress against the goals we agreed on in Q2.

LSG OPERATIONAL REVIEW

Overall Evaluation

I think we met the goals that we set at a reasonable level.

I believe that there are several areas where I could have done more, especially in transferring the system management knowledge we have in the LS Groups.

The operational issues last year have taken most of our time and little contribution has been given to the rest of the OOD Team.

Some exceptions, where I believe we have done better than expected:

Venus Task Force and the System Program Management Task Force could have a high leverage across OOD. Also our flow through funded support of APL 32, ADA, DAWN and the single user VAX were important. The key advantage of flow through funding is that it saves management time to initiate the right thing, not for use as a control tool.

I still think that the decision to provide systems groups with 10% flow through for use to stimulate funding (Research and Advanced Development) is right and should be implemented.

In summary, there is a lot of room for improvement especially in areas with dependencies across OOD and other functions.

UFØØ42

OBJECTIVES FOR LARGE SYSTEMS GROUP FOR FY80 - Ulf Fagerquist

a.

Reference Goal 1. Meet the goals stated in the committed plans.

- **Objectives:**
- Agreement to formal reference plans by OOD in Q2.
- b. Quarterly update to Red Book and Beige Book unless for major deviation to plan.
- c. Operate with the following meaning of the plans:
 - Red Book is the formal document prepared by PM stating their commitment of funded strategy and specific product/service results on which business groups should base their short-and long-range plans.
 - Beige Book is the formal document prepared by EM stating their commitments in funded programs and specific results on which PM can base their Red Book commitments.
- Reference Goal 2 Provide an environment in which people are able to perform at their highest potential of output and creativity which increases job satisfaction and improves contribution.
 - a. Clear charter for each group to build 3 year goals by Q2.
 - b. Agreement with BJ about long-range charter for Marlboro Software Engineering to provide stability by Q2.
 - c. Plan and program to upgrade the basic skills in people management by Q2 to implement Q3/Q4.
 - d. Stabilize 2080 goals and 3 year budget by Q2.
 - e. Five-year business plan for 36-bit products approved by Q3.
 - f. Red Book/Beige Book goals at supervisor level

and part of performance evaluation for each employee by 03.

- System program managemennt role, process and g. tools defined and committed as part of OOD operations process by Q3.
- h. Responsibility charting of system program management roles between engineering and manufacturing by Q3 and coordinate with J. Holman.
- i. Human resource planning process including development of replacements for all levels of managers - coordinate with J. Meyer by Q3.
- Reference Goal 3 Ensure that DEC is in a position to have all those processes, methods, skills and technologies available to develop and deliver at the right time, new and future high-end DEC Systems, the best in cost-of-ownership and customer satisfaction in those markets DEC elects to have leadership.

(

- `a. Each function has the scenario for the next 3 years and plan on how to get resources - plan Q3 and funded Q4.
- Cost-of-ownership model for large systems by Q3 ь. and as operational planning tool Q4.
- Customer satisfaction model for VENUS in 03 for c. verification of program goals against competition Q4.
- Reference Goal 4 Provide active support to other groups that can help make any and all goals in Digital's overall product strategy happen; primarily the commitment to make the VAX/VMS Systems become the main product in all DEC's markets; second, to give highest priority to the implementation of Digitlal's distributed system structure and easy customer movements to VAX Systems.
 - Develop industry scenario for technologies and a. customer uses in LSG product area and use to test our current strategy Q2.
 - Reestablish customer advisory group within b. DECUS to better understand 1983-1987 customer movement - Q3 for report Q4.
 - With OOD establish 90% targets for strategy c. implementation by Q3.

' ľ

Reference Goal 5 Provide the Large System Strategy and get the implementation of this strategy committed to explicit action plans in all functions throughout Digital as part of Digital's overall product strategy.

٢

- a. Update the Red Book 1980-1985 and include two possible scenarios for test by Q2.
- b. Obtain commitment to funded explicit action plans to support the LSG Strategy on:

INTERCONNECT Plans Q2 - funding Q3 with B. Demmer.

SOFTWARE Plans Q3 - funding Q4 with BJ

MASS STORAGE Plans Q3 - funding Q4 with G. Saviers.

- Reference Goal 6 Develop "VENUS" as the principal high-end DEC System product for all DEC markets and the growth path for the PDP-11 and 11/789 customer base.
 - a. Have updated system business plan and cursory implementation plan approved as part of phase Ø and 1 by Q3.
- Reference Goal 7 Develop the 2080 to maintain DEC leadership in timesharing and be the compatible growth alternative for the DEC10/20 customer base.
 - a. Have system business plan and cursory program plan approved in phase 0 and 1 by Q3.
- Reference Goal 8 Develop "interconnect" to make it attractive for existing DEC10/20 to add VAX Systems, as well as the 2080, via DEC networks and interconnect for all markets and applications.
 - Develop jointly with BJ and Demmer a five-year scenario for evolution of technologies and application uses of distributed systems to give visibility to need for long lead-time investments in knowledge (research) and skills (experience). Possibly also explore market trends that would require us to initiate application oriented venture experiments with personal computing and work-stations first cut Q3 initial funding Q4.
- Reference Goal 9 Converging of DEC10/20 to VAX movement with ease, through common language definitions, common implementation where feasible, common user-level

utilites and data conversion routines. For each new DEC-20 of VAX customer, as time progresses, make the movement between systems more attractive.

a. Establish realistic goals with BJ by Q2.

- b. Prepare detailed software requirements relative to competition as evolves during the next ten years to accomplish goals for customer shift in initial and add-on purchases of high-end systems during this period -have initial plan Q2.
- c. Process to monitor customer purchase pattern for various pre-defined market/applications profiles by Q4.
- Reference Goals 10 Manage product business plans such that the right customer expectation is set by marketing and sales that the expected goals are met in products and services delivered.

٤

 Agreement with Si to process through which highest possible visibility can be given to progress against plans to give early warning to problems and avoid surprises also....
 establish a formal process make PM/EM equally responsible for project commitments - this to reduce risk of overcommitments - plan byQ2 and Q3 in operational mode.

ap

GOALS

- . Meet the goals stated in the committed plans.
- 2. Provide an environment in which people are able to perform at their highest potential of output and creativity which increases job satisfaction and improves contribution.
- 3. Ensure that DEC is in~a position to have all those processes, methods, skills and technologies available to develop and deliver at the right time, new and future high-end DEC Systems, the best in cost-of-ownership and customer satisfaction in those markets DEC elects to have leadership.
- 4. Provide active support to other groups that can help make any and all goals in Digital's overall product strategy happen; primarily the commitment to make the VAX/VMS Systems become the main product in all DEC's markets; and second, to give highest priority to the implementation of Digital's distributed system structure and easy customer movements to VAX Systems.
- S. Provide the Large System Strategy and get the implementation of this strategy committed to explicit action plans in all functions throughout DIGITAL as part of Digital's overall product strategy.
- 6. Develop "VENUS" as the principal high-end DEC System product for all DEC markets and the growth path for the PDP-11 and 11/780 customer base.
- Develop the "2080" to maintain DEC leadership in timesharing and be the compatible growth alternative for the DEC10/20 customer base.
- 9. Develop "interconnect" to make it attractive for existing DEC10/20 to add VAX Systems, as well as the 2080, via DEC networks and interconnect for all markets and applications.
- G. Converging of DECl0/20 to VAX movement with ease, through common language definitions, common implementation where feasible, common user-level utilities and data conversion routines. For each new DEC-20 or VAX customer, as time progresses, make the movement between systems more attrative.
-)D . Manage product business plans such that the right customer expectation is set by marketing and sales and that the expected goals are met in products and services delivered.

· r

ap

GOAL 1: MEET GOALS STATED IN COMMITTED PLANS.

Ę

PROGRESS: I have seen the key goal for FY80 to manage the shift in investment to 32-bit products within the Large System product area.

VENUS: The transition of Venus has been accomplished. The program team is now in place and reasonably cohesive and effective. Problem-solving has been open with good involvement and help from all parts of the company.

> Phase 1 reached with broad cross-functional consensus and participation. We are late in getting to Phase 2, our goal was February, now it is April. The MCA and packaging are still in an advanced development stage. Several technologies in these areas must still be verified to work. Unacceptable risks are MCA/I²L/Spec and MCA sockets.

> Acceptable contingency plans for each of the unacceptable risks required to pass from Phase 1 to Phase 2.

SUMMARY: Venus will not be on firm development ground until July, and there is still high risk for major redesign due to technology.

NEW GOAL: I need to understand why it will take us <u>10-years</u> from the decision to use ECL (1972) until we see the second generation ECL (MCA/I²L) in prototype. Are we already (very) late in Venus II or on the wrong track altogether?

<u>36 BIT</u> The triple jump task to manage the integration of the "LCG Division" into DEC (handed me by John Leng), drive the new corporate strategy towards VAX with OOD and reset the 36-bit product expectation (P/L, Sales, customers and Engineering) from a \$15M to a \$9M, investment level has been an excellent OJT experience but one that knocked me over more than once!

The situation today is that we have recovered an "out of control" situation through several project cancellations - COBOL 79, TPS20, Minnow, Dolphin, etc. - and are now back to a more focused plan around the 2080.

The timing of the corporate strategy has helped tremendously.

KL reliability has improved significantly (reduction of downtime by more than a factor of two in fifteen-months) through the KLSEP Program with FS.

The 2080 appears to be an innovative opportunity created by a very small team (again). Another opportunity is "Tiny", the CPL to PL/1 upgrade by Xenakis, and Chroma with Melanson the innovator of the MEA/I² and Dave McClure (who created and coded 80% of ANF10).

SMP10 appears to be a breakthrough in performance and reliability - started 2 1/2 years ago - with two people, Jim Fleming and Tony Wachs.

Bill McBride has done a good job of pulling together a very fragmented development team (software and hardware), but Product Management did collapse when the investment shift hit and has been carried very much single-handedly by Per. The process of rebuilding this group has a high priority and the first goal is credibility with the Product Lines.

- NEW GOAL: Understand how to apply what we learn from the 36-bit development process in other groups in DEC. I view this group's role to be (become) LSG Advanced <u>Systems</u> Engineering (first spin-off is the Advanced Development of PBS under Hurley).
- OVERALL:

I have no basis for evaluating the performance during the past twelve months. To me there are several areas where mistakes were made and others where miracles happened. I learned a lot, I think.

The major frustration is that I cannot seem to get across the fundamental (as I see it) elements of a system management process. I feel I have "experience" (= made a lot of mistakes through the years), but still see OOD and others re-invent the wheel and are about, in my view, to make or force me to make the SAME MISTAKES AGAIN.

I do not think we have to dream up a system management process from the top and implant it through forced surgery top down, but do we have patience, time and energy to do it in any other way?

5 . .

Effectiveness:

Within LSG: 2

00D and beyond:

<

GOAL 2: ENVIRONMENT WITH JOB SATISFACTION AND IMPROVED CONTRIBUTION.

Ç

PROGRESS: The organizational structure with two system program groups under Hoff and McBride, supported by all other groups - Sawin, Finance; Sur/Kreidermacher, Operations; Rezac, Marlboro Site Services - feels good.

> The agreement to have the Marlboro Software Group to build PBS is an important step towards the VAX transition.

The Product Management organization has several junior people that need training and help. Renewal and recharge of motivation next six-months.

The decision to have Len Kreidermacher focus 100% on the System Managemennt Program and Product Management processes has paid off even beyond LSG.

I am impressed by his progress in integrating work between FS, Mfg and Engineering groups as part of the Venus Task Force.

EVALUATION: We have lost some key contributors during the year, but overall came through in reasonable strengths. We have made contributions beyond the LS Group.

LSG:

00D and beyond

3 2

-3-

(

PROGRESS:

: I think we are on the right track with MCA/I²L, but am not sure. Need to see progress to understand that we can make it happen within the next three-months.

The pipeline architectue on the 2080 is promising and should apply to Venus II.

Chroma which explores custom LSI (goals) should help us understand trade-offs in CAD in semiconductor technologies and future of Macro cell or custom design approaches.

Ease of use (timesharing) knowledge applied to PBS could be a key technology transfer to VAX.

Our decision to volunteer and provide flow through funding to (advanced) software engineering in ADA, DAWN and Single User VAX saved us from many hours of painful negotiations to get done what appears to be right.

EVALUATION: I cannot see any other viable technology path for Venus except more complex structure and standard parts (a la 2080). Ground work for Venus II may be there in time? Software flow through funding the right decision, even if left with higher pain within the hardware groups.

LSG:	2	 4	?	June	is	the	date	in	court
000.	ວ								
000;	2								

GOAL 4: MAKE THE NEW CORPORATE STRATEGY HAPPEN.

2

PROGRESS: Most of our Management energy has to be consumed to drive the Corporate Strategy while still providing leadership in the traditional businesses. The transition was too fast to lead, yet have people follow, especially in the 36-bit. DECUS integration with positive feedback can be expected by the end of calendar 80.

EVALUATION: LSG: 3

00D:
GOAL 5: DEVELOP AND GET APPROVAL OF LARGE SYSTEM STRATEGY.

PROGRESS: We now have a balanced strategy as part of the base plan process. Both Venus and the 2080 are outside the original requirements, but feels more realistic. Venus is budget bound beyond July 1980 and the 2080 is budget bound now. The 2080 fits well as the KL follow-on and does not overlap Venus the way a 2020 replacement product would.

Approval still to go.

£

EVALUATION: LCG: 2-3 OOD: 3-4

GOAL 6: VENUS PLAN - PHASE Ø AND PHASE 1 BY Q3.

PROGRESS: Phase Ø done; Phase 1, 1-2 months late.

3

EVALUATION: LSG:

GOAL 7: 2080 PLAN - PHASE Ø AND PHASE 1 BY Q3.

PROGRESS: Phase Ø and Phase 1 in Q4. Due to lack of Engineering Manager and lack of Product Manager - both now in place.

EVALUATION: LSG: 4

GOAL 8: INTERCONNECT PLAN WITH B.J. AND DEMMER Q3 AND Q4.

PROGRESS: On schedule, still doubt that the product cost expectations can be met. Weak software interaction improved with PBS project.

EVALUATION: 3+

GOAL 9: CONVERGENCE OF 10/20 CUSTOMERS WITH VAX.

Ę

PROGRESS: Languages now better aligned with APL, FORTRAN extended, PL/1 compatible future PASCAL and push COBOL 79 VAX back-end (maybe also ADA VAX back-end).

> Major shift from homogenets to heterogenets could accelerate the 10/20/VAX integration by several years.

Very optimistic about the good people interaction and common interest between VAX and the 10/20 groups. This is key to common goals here.

EVALUATION: LSG: 2 Beyond LCG: 2

GOAL 10: MANAGE CUSTOMER EXPECTATION.

PROGRESS: We have no (painful) customer problems compared to the 10-15 per week with endless KL crises just twelve-months aqo.

> I believe we have reset expectations of future 36 products.

Still concerned that we (DEC) could get carried away by the 2080 expectation. WE MUST FOCUS ON THIS THREAT NOW! NO COMMITMENTS UNTIL PROTOTYPE RUNS. PIPELINES ARE COMPLEX AND UNPREDICTABLE.

EVALUATION:

3

3

00D:

LSG:

TEAM DECISION ANALYSIS

(modified from "Matrix Organization of Complex Businesses).

- I = Prime Responsibility for Starting or Stimulation Action.
- P = Has to be Consulted/Heard (to allow push-back or escalation of issues).
- D = Final Decision for Full Execution (could be many signatures needed).
- E = The One Person (by name, never a committee) who does it.
- C = Checks whether decisions are followed up in quality, timing and cost (indicates who is expected to inspect what is expected!).
- A = Has the authorization to sponsor proposal/decision to <u>next level</u> for review, approval, decision, etc.
- O or Yellow Mark = Action has been explicitly demonstrated to have taken place.
- () = Optional (not necessary, but advised).

ORGANIZATION - CORPORATE RESEARCH GROUP

CHARTER

Provide DEC with the knowledge gained from research activities, inside and outside DEC, from which DEC might see new products, services and uses of computing.

Provide Corporate Library services.

GOALS

[•.

٠.

1

Provide the leadership to ensure a corporate-wide competitive research process for DEC.

Provide a committed research strategy for new, not yet chartered, product and process areas.

Provide an environment which attracts the best people DEC needs.

Become recognized as the leading group in ability to influence and contribute to DEC's overall strategy and the creation of future businesses.

Provide a decentralized corporate-wide library services operation of a quality in par with library services in comparable corporations, but at a lower cost.

OBJECTIVES

STRATEGY

Have available a 1980 strategy for DEC with product ideas for the period from 1985 to 1990 and two possible scenarios for computing needs by the year 1990.

-3-

Reviewed with OOD by October 15.

PROGRAMS

- Obtain commitment to the University Liaison Program by October and have it fully operational by December.
 - Have a program organization for implementing <u>system</u> research on a broad functional basis (OIS, factory of future, VMS across size, range, etc.)

Implemented in Q3.

PROJECTS

- Meet goals stated in committed project plans. ••
 - Have each of the projects in the programs classified as Research, Advanced Developmemt and Product Development...

as of today,

as of December 1979, and

as of June 1980.

Complete by September 14.

Have identified which DEC function and who within this function each research project will be transferred, and by when as it completes the research phase.

Complete by the end of Q1.

Have measurable objectives for each of the projects with milestones for reports of final and interim results.

Complete by the end of Q1.

SERVICE

Establish goals for the library in metrics that allows comparison with the outside.

Complete Q1.

¢

Establish strategy and operations model for the consulting services activities that allows us to better make longer-term investments in skills, methods and with metrics for comparison with outside alternative services.

Complete by Q2.

ORGANIZATIONAL

ap

Define FY81 organizational structure and charters to be fully implemented by July 1980.

Complete target organization in October; and detailed plan for implementation ready in December.

Plan that commits us to specific skill hiring plan, tied to projects.

Complete in Q2.

CORPORATE RESEARCH OPERATIONAL REVIEW

Ç

We are on schedule for the reviewal of the Research Group and its working climate.

The current size (in number of people) is ideal for FY81 to allow management skills, processes and the research facilities to be upgraded to balance the needs.

The 50% growth in the number of people the past year has taken its toll in motivation and quality of work in the group.

The new program direction in PBS and the "Factory of the Future" feels good.

GOAL 1: HAVE AVAILABLE A 1985-1990 SCENARIO. (OOD October 1979).

t

- PROGRESS: Some isolated ideas have been developed. The planning process has been weak. The action has been to formally establish the Planning and Program function under Bob Glorioso to drive this. Stratton Mountain Planning has also been used to focus on longer-range issues.
- EVALUATION: Group: 3

Outside influence: 5 (expect to be improved with Stratton)

GOAL 2: HAVE UNIVERSITY PROGRAM IN PLACE Q2.

PROGRESS: Met goal. The performance well over expectation. Expansion to external research centers co-located with University Research Group will be proposed Q4.

EVALUATION: Contribution within group: 3

Influence Outside Group: 2+

- GOAL 3: HAVE PROGRAM ORGANIZATION FOR SYSTEM RESEARCH ON A BROAD FUNCTIONAL BASIS Q3.
- PROGRESS: On target with the new organization. The key programs, PBS and "Factory of the Future" are gaining momentum. "Office Programs" a big question - should we discontinue?

EVALUATION: Effect within group:

Effect outside group: 3 (Expect significant improvement within 3-months.)

3

GOAL 4: MEET GOALS STATED IN COMMITTED PLAN.

Ę

- PROGRESS: Improvement in the project management process made with documented plans and formal reviews. Technology transfer plans and timing is still not visible enough. Satisfactory results in Small Systems and visible improvements in languages.
- EVALUATION: Effect within group: 3

Effect outside group: 4+

GOAL 5: CLASSIFY AND FORECAST STATUS OF RESEARCH READY FOR ADVANCED DEVELOPMENT AND DEVELOPMENT.

PROGRESS: Plan complete - need to be worked to implementation and tracking.

EVALUATION:

GOAL 6: IDENTIFY TO WHICH DEC FUNCTION AND WHO WITHIN THIS FUNCTION WILL BE THE "TECHNOLOGY CUSTOMER" OF THE RESEARCH PROJECTS.

PROGRESS: Same as 5.

EVALUATION:

3

3

GOAL 7: HAVE MEASURABLE OBJECTIVES OF EACH PROJECT WITH MILESTONES FOR REPORTS.

PROGRESS: Same as 5.

EVALUATION:

3

(

PROGRESS: Completed; strategy and plan for action based on these results are next. Some difficulties in establishing the identity of library exists. Expansion of activities progress on plan.

EVALUATION:

3+

5

- GOAL 9: Establish strategy and operationsmodel for consulting services activities.
- PROGRESS: Very little progress. Will be done as part of the reorganization in Q4.
- EVALUATION:
- GOAL 10: DEFINE FY81 ORGANIZATION CHARTER AND STRUCTURE TO BE FULLY IMPLEMENTED BY JULY 1980.
- PROGRESS: Ahead of target. The dual structure of Planning/ programs and skill center managemennt feels good. This allows a more shallow structure that allows more involvement with individual people contributors and less of a general research administrative management.

I believe that we can also restore a balance between the people resources and the support and processes needed to do quality work.

EVALUATON:

2-3 (need Q4 to be sure)

GOAL 11: HUMAN RESOURCE PLAN IN LINE WITH PROJECT NEEDS.

PROGRESS: People environment out of balance with space, computer services and lab facilities.

Current size (number of people) probably optional for FY81 and use funds to upgrade environment.

EVALUATION:

4 (should be 3 by end of year.)

TEAM DECISION ANALYSIS

(modified from "Matrix Organization of Complex Businesses).

- I = Prime Responsibility for Starting or Stimulation Action.
- P = Has to be Consulted/Heard (to allow push-back or escalation of issues).
- D = Final Decision for Full Execution (could be many signatures needed).
- E = The One Person (by name, never a committee) who does it.
- C = Checks whether decisions are followed up in quality; timing and cost (indicates who is expected to inspect what is expected!).
- A = Has the authorization to sponsor proposal/decision to <u>next level</u> for review, approval, decision, etc.
- O or Yellow Mark = Action has been explicitly demonstrated to have taken place.
- () = Optional (not necessary, but advised).

£

OBJECTIVES FOR LARGE SYSTEMS GROUP FOR FY80 - Ulf Fagerquist

Reference Goal 1. Meet the goals stated in the committed plans.

Objectives:

- a. Agreement to formal reference plans by OOD in Q2.
- b. Quarterly update to Red Book and Beige Book unless for major deviation to plan.
- c. Operate with the following meaning of the plans:
 - Red Book is the formal document prepared by PM stating their commitment of funded strategy and specific product/service results on which business groups should base their short-and long-range plans.
 - Beige Book is the formal document prepared by EM stating their commitments in funded programe and specific results on which PM can base their Red Book commitments.

Reference Goal 2

2 Provide an environment in which people are able to perform at their highest potential of output and creativity which increases job satisfaction and improves contribution.

- a. Clear charter for each group to build 3 year goals by Q2.
- b. Agreement with BJ about long-range charter for Marlboro Software Engineering to provide stability by Q2.
- c. Plan and program to upgrade the basic skills in people management by Q2 to implement Q3/Q4.
- d. Stabilize 2080 goals and 3 year budget by Q2.
- e. Five-year business plan for 36-bit products approved by Q3.

f. Red Book/Beige Book goals at supervisor level

Long Colores

 \bigcirc

and part of performance evaluation for each employee by Q3.

- g. System program management role, process and tools defined and committed as part of OOD operations process by Q3.
- Responsibility charting of system program management roles between engineering and manufacturing by Q3 and coordinate with J. Holman.
- Human resource planning process including development of replacements for all levels of managers - coordinate with J. Meyer by Q3.
- Reference Goal 3 Ensure that DEC is in a position to have all those processes, methods, skills and technologies available to develop and deliver at the right time, new and future high-end DEC Systems, the best in cost-of-ownership and customer satisfaction in those markets DEC elects to have leadership.
 - Each function has the scenario for the next 3 years and plan on how to get resources - plan Q3 and funded Q4.
 - b. Cost-of-ownership model for large systems by Q3 and as operational planning tool Q4.
 - c. Customer satisfaction model for VENUS in Q3 for verification of program goals against competition Q4.
- Reference Goal 4

Provide active support to other groups that can help make any and all goals in Digital's overall product strategy happen; primarily the commitment to make the VAX/VMS Systems become the main product in all DEC's markets; second, to give highest priority to the implementation of Digitlal's distributed system structure and easy customer movements to VAX Systems.

- a. Develop industry scenario for technologies and customer uses in LSG product area and use to test our current strategy Q2.
- b. Reestablish customer advisory group within DECUS to better understand 1983-1987 customer movement - Q3 for report Q4.
- c. With OOD establish 90% targets for strategy implementation by Q3.

Reference Goal 5

Provide the Large System Strategy and get the implementation of this strategy committed to explicit action plans in all functions throughout Digital as part of Digital's overall product strategy.

- Update the Red Book 1980-1985 and include two а. possible scenarios for test by Q2.
- b. Obtain commitment to funded explicit action plans to support the LSG Strategy on:

INTERCONNECT Plans Q2 - funding Q3 with B. Demmer.

SOFTWARE Plans Q3 - funding Q4 with BJ

MASS STORAGE Plans 03 - funding 04 with G. Saviers.

Reference Goal 6 Develop "VENUS" as the principal high-end DEC System product for all DEC markets and the growth path for the PDP-11 and 11/789 customer base.

a. Have updated system business plan and cursory implementation plan approved as part of phase Ø and 1 by Q3.

Develop the 2039 to maintain DEC leadership in timesharing and be the compatible growth alternative for the DEC1 $\emptyset/2\emptyset$ customer base.

> a. Have system business plan and cursory program plan approved in phase Ø and 1 by 03.

Reference Goal 8 Develop "interconnect" to make it attractive for existing DEC10/20 to add VAX Systems, as well as the 2080, via DEC networks and interconnect for all markets and applications.

> a. Develop jointly with BJ and Demmer a five-year scenario for evolution of technologies and application uses of distributed systems to give visibility to need for long lead-time investments in knowledge (research) and skills (experience). Possibly also explore market trends that would require us to initiate application oriented venture experiments with personal computing and work-stations - first cut Q3 - initial funding Q4.

Serence Goal 9

Converging of DEC10/20 to VAX movement with ease, through common language definitions, common implementation where feasible, common user-level

ference Goal ?

utilites and data conversion routines. For each new DEC-20 of VAX customer, as time progresses, make the movement between systems more attractive.

- a. Establish realistic goals with BJ by Q2.
- b. Prepare detailed software requirements relative to competition as evolves during the next ten years to accomplish goals for customer shift in initial and add-on purchases of high-end systems during this period -have initial plan Q2.
- c. Process to monitor customer purchase pattern for various pre-defined market/applications profiles by Q4.
- Reference Goals 10 Manage product business plans such that the right customer expectation is set by marketing and sales that the expected goals are met in products and services delivered.
 - Agreement with Si to process through which highest possible visibility can be given to progress against plans to give early warning to problems and avoid surprises also.... establish a formal process make PM/EM equally responsible for project commitments - this to
 reduce risk of overcommitments - plan byQ2 and Q3 in operational mode.

SUBJ: OPERATIONAL REVIEW

This is my evaluation of progress against the goals we agreed on in \mathbb{Q}^2 .

LSG OPERATIONAL REVIEW

Overall Evaluation

I think we met the goals that we set at a reasonable level.

I believe that there are several areas where I could have done more, especially in transferring the system management knowledge we have in the LS Groups.

The operational issues last year have taken most of our time and little contribution has been given to the rest of the OOD Team.

Some exceptions, where I believe we have done better than expected:

Venus Task Force and the System Program Management Task Force could have a high leverage across OOD. Also our flow through funded support of APL 32, ADA, DAWN and the single user VAX were important. The key advantage of flow through funding is that it saves management time to initiate the right thing, not for use as a control tool.

I still think that the decision to provide systems groups with 10% flow through for use to stimulate funding (Research and Advanced Development) is right and should be implemented.

In summary, there is a lot of room for improvement especially in areas with dependencies across OOD and other functions.

GOAL 1: MEET GOALS STATED IN COMMITTED PLANS.

PROGRESS: I have seen the key goal for FY80 to manage the shift in investment to 32-bit products within the Large System product area.

VENUS: The transition of Venus has been accomplished. The program team is now in place and reasonably cohesive and effective. Problem-solving has been open with good involvement and help from all parts of the company.

> Phase 1 reached with broad cross-functional consensus and participation. We are late in getting to Phase 2, our goal was February, now it is April. The MCA and packaging are still in an advanced development stage. Several technologies in these areas must still be verified to work. Unacceptable risks are MCA/I²L/Spec and MCA sockets.

> Acceptable contingency plans for each of the unacceptable risks required to pass from Phase 1 to Phase 2.

- SUMMARY: Venus will not be on firm development ground until July, and there is still high risk for major redesign due to technology.
- NEW GOAL: I need to understand why it will take us <u>10-years</u> from the decision to use ECL (1972) until we see the second generation ECL (MCA/I²L) in prototype. Are we already (very) late in Venus II or on the wrong track altogether?
- <u>36 BIT</u> The triple jump task to manage the integration of the "LCG Division" into DEC (handed me by John Leng), drive the new corporate strategy towards VAX with OOD and reset the 36-bit product expectation (P/L, Sales, customers and Engineering) from a \$15M to a \$9M, investment level has been an excellent OJT experience but one that knocked me over more than once!

The situation today is that we have recovered an "out of control" situation through several project cancellations - COBOL 79, TPS20, Minnow, Dolphin, etc. - and are now back to a more focused plan around the 2080.

The timing of the corporate strategy has helped tremendously.

KL reliability has improved significantly (reduction of downtime by more than a factor of two in fifteen-months) through the KLSEP Program with FS.

The 2080 appears to be an innovative opportunity created by a very small team (again). Another opportunity is "Tiny", the CPL to PL/1 upgrade by Xenakis, and Chroma with Melanson the innovator of the MEA/I² and Dave McClure (who created and coded 80% of ANF10).

SMP10 appears to be a breakthrough in performance and reliability - started 2 1/2 years ago - with two people, Jim Fleming and Tony Wachs.

Bill McBride has done a good job of pulling together a very fragmented development team (software and hardware), but Product Management did collapse when the investment shift hit and has been carried very much single-handedly by Per. The process of rebuilding this group has a high priority and the first goal is credibility with the Product Lines.

NEW GOAL: Understand how to apply what we learn from the 36-bit development process in other groups in DEC. I view this group's role to be (become) LSG Advanced <u>Systems</u> Engineering (first spin-off is the Advanced Development of PBS under Hurley).

OVERALL: I have no basis for evaluating the performance during the past twelve months. To me there are several areas where mistakes were made and others where miracles happened. I learned a lot, I think.

> The major frustration is that I cannot seem to get across the fundamental (as I see it) elements of a system management process. I feel I have "experience" (= made a lot of mistakes through the years), but still see OOD and others re-invent the wheel and are about, in my view, to make or force me to make the SAME MISTAKES AGAIN.

I do not think we have to dream up a system management process from the top and implant it through forced surgery top down, but do we have patience, time and energy to do it in any other way?

Effectiveness:

Within LSG: 2

00D and beyond: 5

- GOAL 2: ENVIRONMENT WITH JOB SATISFACTION AND IMPROVED CONTRIBUTION.
- PROGRESS: The organizational structure with two system program groups under Hoff and McBride, supported by all other groups - Sawin, Finance; Sur/Kreidermacher, Operations; Rezac, Marlboro Site Services - feels good.

The agreement to have the Marlboro Software Group to build PBS is an important step towards the VAX transition.

The Product Management organization has several junior people that need training and help. Renewal and recharge of motivation next six-months.

The decision to have Len Kreidermacher focus 100% on the System Managemennt Program and Product Management processes has paid off even beyond LSG.

I am impressed by his progress in integrating work between FS, Mfg and Engineering groups as part of the Venus Task Force.

EVALUATION: We have lost some key contributors during the year, but overall came through in reasonable strengths. We have made contributions beyond the LS Group.

LSG: 3

00D and beyond 2

GOAL 3: ENSURE COMPETITIVE POSITIONING FOR DEC IN HIGH-END PRODUCTS.

PROGRESS: I think we are on the right track with MCA/I²L, but am not sure. Need to see progress to understand that we can make it happen within the next three-months.

The pipeline architectue on the 2080 is promising and should apply to Venus II.

Chroma which explores custom LSI (goals) should help us understand trade-offs in CAD in semiconductor technologies and future of Macro cell or custom design approaches.

Ease of use (timesharing) knowledge applied to PBS could be a key technology transfer to VAX.

Our decision to volunteer and provide flow through funding to (advanced) software engineering in ADA, DAWN and Single User VAX saved us from many hours of painful negotiations to get done what appears to be right.

EVALUATION: I cannot see any other viable technology path for Venus except more complex structure and standard parts (a la 2080). Ground work for Venus II may be there in time? Software flow through funding the right decision, even if left with higher pain within the hardware groups.
LSG: 2 - 4 ? June is the date in court

00D:

GOAL 4: MAKE THE NEW CORPORATE STRATEGY HAPPEN.

2

2

PROGRESS: Most of our Management energy has to be consumed to drive the Corporate Strategy while still providing leadership in the traditional businesses. The transition was too fast to lead, yet have people follow, especially in the 36-bit. DECUS integration with positive feedback can be expected by the end of calendar 80.

EVALUATION: LSG: 3

00D:

GOAL 5: DEVELOP AND GET APPROVAL OF LARGE SYSTEM STRATEGY.

PROGRESS: We now have a balanced strategy as part of the base plan process. Both Venus and the 2080 are outside the original requirements, but feels more realistic. Venus is budget bound beyond July 1980 and the 2080 is budget bound now. The 2080 fits well as the KL follow-on and does not overlap Venus the way a 2020 replacement product would.

Approval still to go.

- EVALUATION: LCG: 2-3 OOD: 3-4
- GOAL 6: VENUS PLAN PHASE Ø AND PHASE 1 BY Q3.
- PROGRESS: Phase Ø done; Phase 1, 1-2 months late.
- EVALUATION: LSG: 3

GOAL 7: 2080 PLAN - PHASE 0 AND PHASE 1 BY Q3.

- PROGRESS: Phase Ø and Phase 1 in Q4. Due to lack of Engineering Manager and lack of Product Manager - both now in place.
- EVALUATION: LSG: 4
- GOAL 8: INTERCONNECT PLAN WITH B.J. AND DEMMER Q3 AND Q4.
- PROGRESS: On schedule, still doubt that the product cost expectations can be met. Weak software interaction improved with PBS project.

EVALUATION: 3+

-5-

- GOAL 9: CONVERGENCE OF 10/20 CUSTOMERS WITH VAX.
- PROGRESS: Languages now better aligned with APL, FORTRAN extended, PL/1 compatible future PASCAL and push COBOL 79 VAX back-end (maybe also ADA VAX back-end).
 - Major shift from homogenets to heterogenets could accelerate the 10/20/VAX integration by several years.

Very optimistic about the good people interaction and common interest between VAX and the 10/20 groups. This is key to common goals here.

EVALUATION: LSG: 2 Beyond LCG: 2

- GOAL 10: MANAGE CUSTOMER EXPECTATION.
- PROGRESS: We have no (painful) customer problems compared to the 10-15 per week with endless KL crises just twelve-months ago.

I believe we have reset expectations of future 36 products.

Still concerned that we (DEC) could get carried away by the 2080 expectation. WE MUST FOCUS ON THIS THREAT NOW! NO COMMITMENTS UNTIL PROTOTYPE RUNS. PIPELINES ARE COMPLEX AND UNPREDICTABLE.

EVALUATION: LSG: 3

00D:

3

CORPORATE RESEARCH OPERATIONAL REVIEW

We are on schedule for the reviewal of the Research Group and its working climate.

The current size (in number of people) is ideal for FY81 to allow management skills, processes and the research facilities to be upgraded to balance the needs.

The 50% growth in the number of people the past year has taken its toll in motivation and quality of work in the group.

The new program direction in PBS and the "Factory of the Future" feels good.

GOAL 1: HAVE AVAILABLE A 1985-1990 SCENARIO. (OOD October 1979).

PROGRESS: Some isolated ideas have been developed. The planning process has been weak. The action has been to formally establish the Planning and Program function under Bob Glorioso to drive this. Stratton Mountain Planning has also been used to focus on longer-range issues.

EVALUATION: Group: 3 Outside influence: 5 (expect to be improved with Stratton)

GOAL 2: HAVE UNIVERSITY PROGRAM IN PLACE Q2.

PROGRESS: Met goal. The performance well over expectation. Expansion to external research centers co-located with University Research Group will be proposed Q4.

EVALUATION: Contribution within group: 3

Influence Outside Group: 2+

GOAL 3: HAVE PROGRAM ORGANIZATION FOR SYSTEM RESEARCH ON A BROAD FUNCTIONAL BASIS 03.

PROGRESS: On target with the new organization. The key programs, PBS and "Factory of the Future" are gaining momentum. "Office Programs" a big question - should we discontinue?

EVALUATION: Effect within group: 3

Effect outside group: 3 (Expect significant improvement within 3-months.)

-1-

GOAL 4: MEET GOALS STATED IN COMMITTED PLAN.

- PROGRESS: Improvement in the project management process made with documented plans and formal reviews. Technology transfer plans and timing is still not visible enough. Satisfactory results in Small Systems and visible improvements in languages.
- EVALUATION: Effect within group: 3

Effect outside group: 4+

- GOAL 5: CLASSIFY AND FORECAST STATUS OF RESEARCH READY FOR ADVANCED DEVELOPMENT AND DEVELOPMENT.
- PROGRESS: Plan complete need to be worked to implementation and tracking.
- EVALUATION:

3

GOAL 6: IDENTIFY TO WHICH DEC FUNCTION AND WHO WITHIN THIS FUNCTION WILL BE THE "TECHNOLOGY CUSTOMER" OF THE RESEARCH PROJECTS.

PROGRESS: Same as 5.

EVALUATION:

3

GOAL 7: HAVE MEASURABLE OBJECTIVES OF EACH PROJECT WITH MILESTONES FOR REPORTS.

PROGRESS: Same as 5.

EVALUATION:

3

PROGRESS: Completed; strategy and plan for action based on these results are next. Some difficulties in establishing the identity of library exists. Expansion of activities progress on plan.

EVALUATION:

3+

5

- GOAL 9: Establish strategy and operationsmodel for consulting services activities.
- PROGRESS: Very little progress. Will be done as part of the reorganization in Q4.

EVALUATION:

- GOAL 10: DEFINE FY81 ORGANIZATION CHARTER AND STRUCTURE TO BE FULLY IMPLEMENTED BY JULY 1980.
- PROGRESS: Ahead of target. The dual structure of Planning/ programs and skill center managememnt feels good. This allows a more shallow structure that allows more involvement with individual people contributors and less of a general research administrative management.

I believe that we can also restore a balance between the people resources and the support and processes needed to do quality work.

EVALUATON:

2-3 (need Q4 to be sure)

GOAL 11: HUMAN RESOURCE PLAN IN LINE WITH PROJECT NEEDS.

PROGRESS: People environment out of balance with space, computer services and lab facilities.

Current size (number of people) probably optional for FY81 and use funds to upgrade environment.

EVALUATION:

4 (should be 3 by end of year.)

TEAM DECISION ANALYSIS (modified from "Matrix Organization of Complex Businesses).

- I = Prime Responsibility for Starting or Stimulation Action.
- P = Has to be Consulted/Heard (to allow push-back or escalation of issues).
- D = Final Decision for Full Execution (could be many signatures needed).
- E = The One Person (by name, never a committee) who does it.
- C = Checks whether decisions are followed up in quality, timing and cost (indicates who is expected to inspect what is expected!).
- A = Has the authorization to sponsor proposal/decision to <u>next level</u> for review, approval, decision, etc.
- O or Yellow Mark = Action has been explicitly demonstrated to have taken place.
- () = Optional (not necessary, but advised).

#### SUBJ: LARGE SYSTEM'S CHARTER AND GOALS

These are my revised statements for my charter and goals.

I view the two key problems for me to resolve, and where I need your advice and help, is in the cross-goal setting with other OOD members.

An agreement to the concept that the 36-bit Product Line is converging with the -11 and VAX, towards a total interconnect DEC System. This convergence requires a commitment to investments primarily in Distributed System and Software, and a joint 36-bit goal among all OOD members.

The most important task is VENUS and its system implementation across functions. I will use the Program Management process with responsibility for the entire implementation of the Product Business Plan, approved by PM4. I should be held accountable (together with PM4) for the implementation of the Marketing/Sales Plan as well as the Development Plan with the goal of customer satisfaction over the product life.

ap

## LARGE SYSTEM GROUP'S GOALS

## ORGANIZATION - LARGE SYSTEM GROUP

## CHARTER

 The two primary purposes of the Large System Group are to develop system products and to provide system management of products sold to customers as complete systems.

- New VAX architecture based systems in the price range of \$100,000 to \$250,000 for average initial purchase of a complete working system.
- All TOPS-10/20 compatible architecture based systems.
- The new system management function, for the small, medium and large systems, includes responsibility for all aspects of planning, program management, business management and the quality through the entire life-cycle of all the hardware, software and service components that make up the complete system product.

## GOALS

- Meet the goals stated in the committed plans.
- Provide an environment in which people are able to perform at their highest potential of output and creativity which increases job satisfaction and improves contribution.
- Ensure that DEC is in a position to have all those processes, methods, skills and technologies available to develop and deliver at the right time, new and future high-end DEC Systems, the best in cost-of-ownership and customer satisfaction in those markets DEC elects to have leadership.
- Provide active support to other groups that can help make any and all goals in Digital's overall product strategy happen; primarily the commitment to make the VAX/VMS Systems become the main product in all DEC's markets; and second, to give highest priority to the implementation of Digital's distributed system structure and easy customer movements to VAX Systems.
- Provide the Large System Strategy and get the implementation of this strategy committed to explicit action plans in all functions throughout DIGITAL as part of Digital's overall product strategy.
- Develop "VENUS" as the principal high-end DEC System product for all DEC markets and the growth path for the PDP-11 and 11/780 customer base.
- Develop the "2080" to maintain DEC leadership in timesharing and be the compatible growth alternative for the DEC10/20 customer base.
- Develop "interconnect" to make it attractive for existing DEC10/20 to add VAX Systems, as well as the 2080, via DEC networks and interconnect for all markets and applications.
- Converging of DEC10/20 to VAX movement with ease, through common language definitions, common implementation where feasible, common user-level utilities and data conversion routines. For each new DEC-20 or VAX customer, as time progresses, make the movement between systems more attrative.
- Manage product business plans such that the right customer expectation is set by marketing and sales and that the expected goals are met in products and services delivered.

ap

#### CORPORATE RESEARCH

UROUP MANAGER: Jim Bell

Daler:

- Provide DEC with the knowledge gained from research activities, inside and outside DEC, from which DEC can produce new products, services and uses of computing.
- o Provide Corporate Library services.

GUALS:

- o Provide leadership in influencing and contributing to DEC's overall strategy and the creation of future businesses.
- o Provide a committed research strategy for new, not yet chartered, product and process areas.
- o Provide an environment which attracts the best people for DEC's needs.
- Provide high quality, decentralized corporate-wide library services in a cost-effective way.

SIRKIEGY:

 $\sigma_{\rm e}$  -Focus our efforts on the research programs listed below, and transfer our  $\sim_{\rm e}$  research results to advanced developers and developers in other groups.

build prototype systems to display multiple research results.

c Computerize the library to provide quality service cost-effectively.

RESEARCH PROGRAMS:

Office Information Systems Program - Ken King

- o Language, Data Base & Applications Program George Poonen –
- Distributed Processing Program Rick Peebles
- o Architecture Program Lloyd Dickman
- o Microcomputers Program Don Gaubatz
- o Terminals Research Program Charle' Rupp
- o Small Systems Program Fernando Colon Osorio
- University and External Research Program Dick Eckhouse
- o Library Program Ralph Coffman

STAFFING: 55 Research & 16 Library

COSI: 45.55N Total

Research (2.6), including (.5) consulting (Q1. \$50 K under budget)

Library \$400K (unresolved future budget problems)

University Relations \$250K (initial year funding of \$155K by TPG)

OFFICE INFORMATION SYSTEMS RESEARCH PROGRAM

PROGRAM LEADER: Ken king

DESCRIPTION:

 The Office Information Systems Program is concerned with the use of computer technology in an office environment to assist the office worker in the creation, distribution, storage, and retrieval of information.

GUALS:

- Extend DEC experience in non-text items like speech and graphics.
- Understand user interface requirements for future office systems.
- o Influence company strategy in future office markets.

SIRATEGY: .

- Develop working prototype hardware/software systems
- Use above systems to work interface issues
- o Nonitor university and outside research in this area

PROJECTS (PROJECT LEADERS):

- o OlS Architecture (Ken King) -
- Voice Output (Martin Ninow)
- o Speech Input (Paul Thordarson)
- o Office Graphics (Open)
- o FAX/image/voice (Rick Kalin)

STAFFING: 3 people + 3 openings CUST:  $\phi$  37K (FY80), \$500K (FY81)

#### LANGUAGES, DATA BASE AND APPLICATIONS

PROGRAM LEADER: George Poonen

## **DESCRIPTION:**

o The orientation of this program is to study and perhaps abstract some general principles or techniques which are applicable to a large number of software applications.

#### GOALS:

- Provide DEC with state-of-the-art experience in software engineering, pprogramming languages, and database technology.
- o Understand the needs of software applications developers.
- Act as a source of in-house expertise in the software engineering, programming language, and database areas.

#### STRATEGY:

- Investigate theoretical aspects of practical application problems.
- Develop working prototypes to demonstrate the feasibility of important concepts.
- o Remain abreast of the state-of-the-art.

#### PROJECTS (PROJECT LEADERS)

- o STEP (Earl Van Horn)
- Very High Level Languages DAWN (Ed Lowry)
- Compiler Technology ADA (Ike Nassi)
- Data Base Technology (Fred Maryanski)

STAFFING: 8 people + 3 openings

COST: \$520K (FY80), \$715 (FY81)

## Distributed Systems Research Program

program Leader: Rick Peebles

DESCRIPTION:

The Distributed Systems research program is focussed on the architecture of distributed systems and networks.

GOALS:

- o Work with Software Engineering management and development groups to assure a coherent set of distributed system products.
- Explore possible architectures for distributed systems and experiment with relevant technology to determine its applicability to our products.
- o Effect technology transfer into software development groups.
- Assist in the formation of advanced development programs in development groups.

STRATEGY:

- Work with Software Engineering to establish a long range planning group.
- Design and implement a prototype for a distributed system architecture to demonstrate the concepts and identify potential barriers.
- Work with a customer (Manufacturing Information Systems) to evaluate the proposed architecture and to gain experience with a set of real problems.
- Sponsor external research (IRIA) that will explore alternative approaches.
- As advanced development is put into place in development groups, extend the time horizon of the research to explore longer range questions.

Projects (Project Leaders):

ADAPT (R. Peebles)

o Back-End DBMS (J. Passafiume)

- o Distributed TRAX (R. Peebles, J. Talmadge, F. Howell)
- o MIS Requirements (R. Peebles)
- o Network Architecture (S. Wecker)

Staffing: 4.5 people + 2 openings + 1 sabbatical visitor Cost: \$380,500 (FY80), \$422,500 (FY81)

## CUMPUTER SYSTEM ARCHITECTURE RESEARCH PROGRAM PROGRAM SUFFARY

## PROGRAM LEADER: Lloyd Dickman

## DESCRIPTION:

The research program is concerned with understanding the design of computer architectures and the implementation of computer systems. Research investigations concentrate on issues having significant long term benefit, with correspondingly high short term risk.

## GOALS:

- Maintain expertise in computer system architecture and those relates areas which exert significant influence upon it.
- Define long range problems whose solutions will benefit from new knowledge and techniques.
- d lughtity sources of new research results.
- Conduct original research investigations where specific knowledge is not available.
- o Demonstrate application of new architectural concepts to product development.
- o Provide timely insights, low risk evaluation and influence for planning and development.

#### STRATEGY:

- o Characterize existing architectures.
- o Explore functions which require a new architectural foundation.
- Explore alternate computer structures and organizations.
- o broaden the range of computer system implementation.
- o Support architecture planning and management functions.

## PROJECTS:

- o Data Security.
- o Architecture Characterization.
- o System Level Architecture.
- o. High Performance Computing.
- o High Integrity Computing.

## STAFFING: 3 research staff memoers + 4 openings

COST (FYRU estimate):

- o Slook Research Group funding.
- o s H9K GSG sponsored personnel.
- o S 50% GNG provided capital equipment.

b November 1979

MICROARCHITECTURE & MICROCOMPUTERS RESEARCH PROGRAM

## PROGRAM LEADER: Donald A. Gaubatz

## DESCRIPTION:

o The Microarchitecture & Microcomputers Research Program is concerned with recovering the greatest return on Digital's investment in PDP-11 and VAX-11 LSI system processors while simultaneously exploiting the semiconductor industry's investment in LSI peripheral chips.

## GOALS:

- Create a viable approach to I/O for a microVAX single board computer.
- Create a single-CPU low end system architecture which is relevant to intelligent terminals (PDTs) and stand-alone systems.
- o Maintain compatibility between bussed and bounded systems.
- Exploit the DEC-unique microcontroller technology (F-11, J-11) in mass storage controller applications.

## RATEGY:

- Couple PDP-11 Integrated System Architecture concepts to MICROVAX.
- Develop Peripheral Support Circuit (PSC-11) prototype.
- Develop breadboard for cost-reduced mass storage (RX02,..) hardware emulation.

#### PROJECTS:

- O INTEGRATED SYSTEMS ARCHITECTURE
- O MICROVAX I/O
- COST-REDUCED PDP-11 SYSTEMS
- o T-11 EXTENSIONS, PHASE II
- O F-11, J-11 MICROCONTROLLER
- 0 LSI CPU MICROCODE DEVELOPMENT

AFFING: 2 people + 2 openings (FY80), + 3 openings (FY81) COST: \$217,K (FY80), \$455K (FY81)

## TERMINALS RESEARCH PROGRAM

PROGRAM LEADER: Charle' R. Rupp

## DESCRIPTION:

The Terminals Research Program is concerned with the investigation of computer architecture issues relating to the configuration and design of future DEC hard and soft-copy terminals. This program is also concerned with the exploration of alternative technologies for the print-forming, visual display and operator entry devices in future terminals.

GOALS:

- Define and demonstrate the architectural alternatives for terminals which include graphics and enhanced text as base capabilities.
- Demonstrate an example of terminal architecture which has extensibility to intelligent terminal and stand-alone terminal operation.
- Demonstrate the usability of at least one non-CRT display and at least two non-keyboard entry devices.

STRATEGY:

- Develop working prototypes
- Develop demonstration software as appropriate

PROJECTS:...

- VIDEO IMAGING ARCHITECTURE
- ADAPTIVE TERMINAL ARCHITECTURE
- ALTERNATE TERMINAL TECHNOLOGIES

# STAFFING

• 3 people + 1 opening (technician)

## COST:

 \$280K (FY80), including \$170K external funding \$410K (FY81)

NDING (FYS0):

• \$170K (non-CRG); \$110K (CRG)

# PROGRAM NAME: SMALL SYSTEMS PROGRAM

Program Leader: F.C. Colón Osorio

Description: This program consists of three related projects directed towards the solution of some of DEC's most pressing problems in the Low End. The projects within the program vary in nature and scope. For example, while the LE Software Support project is restricted to <u>consulting</u>, the TU58X project is certainly an advanced development project, while the D FMP project is oriented towards research in the distributed processing and operating system partition (modularization) areas.

#### Goals:

- Acquire an understanding of the impact of semiconductor technology advances, specifically the microprocessor on a chip, on the implementation, architecture (organization, interconnect, etc.), software, and peripheral devices of the future.
- Influence the Company's strategy on the design and specification of distributed systems. Specifically, the interconnect structure and in the area of software segmentation.
- Support the development of software tools in the low end at DEC.
- Investigate the applicability of distributed systems concepts to DEC's traditional business areas.

Strategy:

- Develop a working multiple microprocessor prototype where the concepts of software segmentation can be tested.
- Provide the necessary tools to generate and support code for microprocessors efficiently.
- Permeate through the Corporation ideas and concepts supporting distributed processing.

Projects and Leaders: D²PMP - F. C. Colón Osorio Stand-Alone TU58 - Eric Peters Low End Software Support - John Morse Staffing: Four people plus one opening

Funding: Internal (Corporate Research) and external sources, totalling \$273.5K.

Program Leader: Dick Eckhouse

Description:

 The External Research Program solicits and manages the external research activities that utilize expertise and resources outside of the corporation.

Goals:

- Bring external research results (tools and prototypes) into the corporation so that they may influence the development of future products.
- o Encourage the use of DEC products in the research community so as to increase the number of projects that utilize DEC hardware and software, as well as the number of people (faculty and students) experienced with DEC products.

Strategy:

- o Identify important research topics and centers of excellence.
- o Initiate contracts with these centers.
- Nonitor contract and work to increase the communications flow.

Deliverables/Schedule:

- 1. Submit proposal to the operations committee for approval and equipment funding (\$5,000,000) -- Q1.
- Conclude contracts with universities to which informal commitments have been made -- Q1, Q2.
- Initiate review process using the contract review board -- Q1.
- 4. Using contract review board write summary report on selected research areas and identified institutions to fund in these areas -- Q3.
- 5. Develop and fund ten research contracts -- Q1 to Q4.
- 0. Neet with twenty potential research contractors -- Q1 to Q4.
- 7. Provide equipment forecast for FY 81 -- Q4.
- Hire Secretary and Administrative Assistant to support function -- Q2.
- 9. Attend two sales meetings for sponsoring product lines to enlist their support -- 45.

Attend three conferences to build rapport with universities -- Q2,
 Q5.

Staffing: Dick Eckhouse, Administrative Assistant(open), Secretary(open) Cost: \$155K (FY50), \$250K (FY51)

## CORPORATE LIBRARIES SYSTEM

## PROGRAM LEADER: Ralph Coffman

- SCOPE: The Corporate Libraries System is a networked organization with the Corporate Library, Maynard, responsible for developing, testing, implementing, and monitoring information services throughout the twelve branch libraries, other remote locations, special groups, and projects corporate-wide.
- GOALS: o Provide quality library services cost-effectively to all Digital functions and locations.
  - Provide materials, services, and training to help Digital personnel perform their jobs more effectively by improving their ability to access needed information.

## STRATEGY:

- Define long-range phased program and short-range projects to solve low-risk components.
- Anticipate Digital information requirements and facilitate information transfer to remote sites through existing corporate or external networks. Projects: FAX, 11/70 based library applications.
- Exploit new or existing databases and coordinate employee access to them with branch information specialists. Projects: DBMS, SDI, Information Center.
- Educate Digital employees and provide relevant training materials (brochures, AV programs, and handbooks) necessary. Projects: Handbook, Promotional Package.

## PROJECTS: \$40K, total

0	SDI	o Information Center,
0	DBMS	O FAX
0	11/70 Networking	o Promotional Package
0	Handbook	<ul> <li>Acquistions/Serials</li> </ul>
		o Cataloging

STAFFING: 16 people in Maynard supporting 12 branch libraries

COSTS: \$590K ongoing plus \$40K one-time projects. Budget is \$480. For alternative actions see separate sheet. Fuller

aggressive set of objection

Attached are five items I think cover the performance assessment and review topics for our meeting next Wednesday.

General Assessment of Technical Director's Group -1.

2. Assessment of my personal performance

Post Q3 Review of SA&T FY80 operating objectives .3.

4. Charter, Goals, and Objectives for SA&T (Nov. 28, 1979)

Standards Goals and Objectives, 6 February 80. 5.

I'll plan to move to a format that integrates my assessment of operating objectives on the same sheet of paper as the operating objective itself, but for this pass the only way to meet our deadline was to give them to you separately.

(I'm doing this against a deadline of leaving to talk at a Performance Woods Meeting so I may show up Wednesday with a few corrections or additions to what you see here.)

memorandum

+-----

Subject: General Assessment of Technical Director's Group Q3 FY80

To: Gordon Bell Larry Portner Date: 3/25/80 Tue 12:16:43 From: Sam Fuller Dept: Systems, Arch., & Technology 8-223-4562 Ext.: Loc.: ML3-5/H33

I have just completed the detailed assessment of all the operating objectives for SA&T. Overall, I believe SA&T has done well in Q3, to use grades I would say B+ to A- average with a manageable number of incompletes.

The written objectives cover most of what is being done, but a few key efforts not included are:

- Tracking and sponsoring the VAX configuration effort 0 (XCON). Some involvement by SA&T has been essential to coordinate with manufacturing and make sure the funding more importantly) engineering and (even responsibilities have been accepted within development groups.
- 0 The software architecture for our new interconnects made major progress in Q3. Only part of the value of the effort will be seen in the report in April. Better understanding and a common set of concepts is now beginning to exist between base systems software and the network group.
- 0 Reorganization of technology assessment group to provide more management focus and fix weakest section in current organization.
- ο Moving ahead with Mill/Merrimack teleconferencing link.

The Architecture Group is doing a respected, credible job. The key to their continued viability is the hiring effort in Q3/Q4. I believe the prospects look good for hiring the necessary additional people.

The Systems Performance Group continues to run smoothly. Given feedback from development groups and my own assessment, I am moving toward more attention to the quality and utility of results and responsiveness to development and central strategy needs. We also need to get distributed performance groups working more in support of each other rather than as separate fiefdoms. This last item will take time and patience.

In the Office of Technology, my assessment is that we are using Kotok (and Strecker) very effectively for technical review and exploring alternative technical solutions. CAD strategy is making slow but steady progress. Support for RAD/TRAD committee is working much better than nonsupport of a year ago. <u>Advanced Development Program</u> needs to be explicitly defined and reviewed.

Overall, the staff is (just) beginning to be able to work together as a team. My direct reports come from very different backgrounds and perspectives but often have extensive knowledge of other areas in SA&T. (E.g., Strecker's prior performance work, Kotok's knowledge of architecture, Keating and Kotok on standards, etc.)

If the staff needs strengthening in any area, (and it does) it is in general management. As a result, "dotted line" reports have been added to staff over the past half year (Keating, G. Johnson, E. Gianetto) to get the necessary broader perspective and add people with good management ability and insight to the staff. Now that I have personnel support I'm planning in Q4 to get more explicit and open feedback from each staff menber on their perception of SA&T operations. +----+ | d i g i t a l | +----- interoffice memorandum

Subject: Assessment of Personal Objectives, Q3 FY80

To: Gordon Bell Larry Portner Date: 3/25/80 Tue 14:37:40 From: Sam Fuller Dept: Systems, Arch., & Technology Ext.: 8-223-4562 Loc.: ML3-5/H33

Fundamentally, the bulk of my time and attention is spent managing SA&T. The organization is now in a steady state operation. I believe the group no long feels in startup mode. Throughout Q3 I have been able to address a sequence of organizational issues of substance with the goal of strengthening the group. Specifically,

- Working with Terry Potter to continue his excellent control and planning in the performance group and to focus more clearly on the actual <u>quantitative results</u> and <u>specific insights</u> needed by the development group. None of his previous managers pushed in this direction. The VAX positioning and competitive data that is or will be available on announcement of the 11/44, VMS R2, and Comet are some examples.
- o Moved Dan Goor, and TAI in general, next to the competitive analysis work in Potter's group to focus more management attention on the weakest area in SA&T.
- Moved Bob Kusik from continually working "people process" issues to getting a draft of the CAD Redbook out. I believe the process issues have improved by having a concrete task to work on.
- Began to work with Bill Strecker on management issues as opposed to purely technical development issues. (Long term Bill clearly should be leading a small, high quality advanced development or applied research team.)
- Supported Alan Kotok as he reviews and uncovers problems in major projects in Marlboro and Tewksbury. (I think Alan has been very effective in the past quarter in comm. strategy, Mercury review, and interconnect in general.)
- Moved dotted line reports, Keating and Glenn Johnson, into more visible roles within staff to help give needed depth to staff.

In addition to managing SA&T, I continue to spend time on the following things that I believe make me more effective as a Technical Director. It is probably good for us to discuss them explicitly as I am seeing a tendency to loose sight of these efforts as the management demands of SA&T continue to press for my time.

- 1. <u>RAD Member</u>. This is a nontrivial part of the week, averaging a half day per week. I think it's important for me to be directly involved in RAD for FY80 to both understand what makes it work (and at times not work) and to install the necessary staff support so that the RAD members are not lost in paper work and the RAD committee does a responsible job of reviewing proposals and ongoing A.D. Both objectives will be accomplished by the end of FY80 and at that time I plan to resign from RAD after finding a suitable replacement.
- 2. Sponsor for the <u>XCON</u> (VAX Configuration Project). Until committed program plans are in place for XCON in manufacturing and order processing and hardware and porgramming support within engineering is in place I will continue to push on open issues and get the necessary commitments. This effort has very high potential payoff. Tewksbury is beginning to see the value of XCON and as they are now taking on increased repsonsibilities I can begin to reduce my own direct involvment.
- 3. Personally led the <u>Interconnect Software Architecture</u> effort in February, amounting to about a half time commitment for the month. Given the history, personality differences, and wide gap in technical approach, I believe we had no choice but for me to be directly involved in this initial definition phase.
- 4. Personally scoped, led, and revised the <u>Standards report</u> to <u>OOD</u> to ensure closure. (It wasn't going to make it as a pure consensus process.)
- 5. Led the <u>Mercury review</u> meeting, and pre-meeting work, to a constructive conclusion March 21.

P

R

- 6. Revised my chapter on Performance Evaluation in the textbook Introduction to Computer Architecture. To be published later this year.
- 7. Continued contact with CMU, Stanford, and other universities. (Though this is dropping off as demands of SA&T increase).

To address question within engineering as to what the Technical Director's group does, structured talk at OOD Framingham meeting to make my group's value to engineering as clear as possible.

Below are the set of personal objectives we discussed at our January 30, 1980 review meeting.

Priority	Assess- ment	Personal Objectives
1	В	1. Strengthen general management skills via experience and some training.
2	В	2. Maintain and broaden technical expertise.
		<ul> <li>Limited but nonzero paper publication.</li> <li>Talk at some universities.</li> <li>Interact with individual contributors on technical, as well as process issues.</li> <li>Drive a few topics.</li> </ul>
2	C+	3. Get the Technical Director's direct reports working together as a team. Right now they come from very different parts of DEC.
an 1. 1		3a. Get all parts of SA&T reviewed and working well.
3	A	4. SA&T is not understood by the rest of DEC. Education job required.
?	?	5. Long Term Goals:
		<ul> <li>Lead some aspect of the Research efforts</li> <li>here at DEC.</li> <li>Manage some significant product development.</li> </ul>
2	В	6. Make the most important technical strategies work rather than thrash.
1	I	7. Get a systems architecture development/control process defined and working.
3	С	8. Get technology push operating in a balance with the market pull (e.g., Lyle).
1	I/A	9. Recruit in the architecture area.

8.

## Subject: Post Q3 Review of FY80 Operating Objectives

To: Gordon Bell Larry Portner

С

Date: 3/25/80 Tue 13:24:16 From: Sam Fuller Dept: Systems, Arch., & Technology Ext.: 8-223-4562 Loc.: ML3-5/H33

Next year I'll try for a more integrated format of goals, objectives, and performance against objectives but for this review let me simply comment on performance against objectives and ask you to refer back to statement of objectives in my Nov. 28, 1979 document. Assess-Priority ment Architecture

2

2

2

3

- A1.1 This is formally being pursued by L. Gale as he works in the EMOC. It is a part of his own job goals so it is no longer unstaffed and unfunded. Progress will be paced by the rate of progress of EMOC. I believe L. Gale is/will be one of the stronger advocates on the EMOC.
- A A1.2 With hiring of standards people for MK, Spitbrook, and TW this objective is being accomplished. Following another quarter of education and planning, FY81 objectives will be more specific in this area.
- B A1.3 Progress good here. Will be better when EMOC and OOD gets consistant phase reviews and design reviews in place. In past quarter SA&T has had important (at least vocal and visible) input to 2080, Venus, Mercury, J11, IPA780, and MSCP reviews (no doubt an incomplete list).
- 2 A A2.1 Good. Key areas of architecture memory management, MBA, CI port all made significant progress. In addition, xxx "minor" corrections and clarifications of VAX architecture written and reviewed by VAXB.
  - B A2.2 Must hire before we start here. Original plan is to begin in Q4. Given hiring expectations and Nebula availability, I now believe it will be started during H1 of FY81.

2

1

1

3

1

B+

B-

A+

A2.3 Completed memory management (to conform to VMS de facto decisions) MBS. Uncompleted: UBA.

A2.4 Excellent progress here. AXE program has had major impact on quality of Comet's implementation of VAX Unexpected positive impact architecture. on 11/780, runtime library, SRM and even in one case VMS. Progress on Nebula paced by Nebula schedule. Last month established a base plan for moving AXE from an experimental program to an operational program in FY81. Operational effort now a joint undertaking with D&MSD and hiring/stffing seems to be on schedule.

B/I A3.1 Dependent on hiring. Large number of interviews in architecture group in Q2. 4(?) offers now outstanding and interviews are continuing. Expect necessary PDP-11 person in place by end of FY80.

- 1+ A/I A4.1 Major effort in interconnect software architecture this quarter. Looks good. Will understand quality of work that is now done when we review and ratify with systems architecture group.
  - I A4.2 This objective put on hold at Nov. meeting when you chartered the Interconnect Software Architecture group and related Systems Architecture effort. I would still like to do this but no commitment at present.
    - I A4.3 Poor statement of objective. I can say we have started but I cannot say we've reached any significant milestone. No real progress here. Will update objective and review expectations before next review.

3 B A4.4 Done. Really a minor objective.

A5.1 Have initiated significant advertising and recruiting effort in Q3. Q4 will tell the value of our efforts. I think we are in good shape here.

	Assess-	
Priority	ment	Standards
		(Based on our Jan. 30 discussion and an SA&T woods meeting, the operating objectives were revised and the new objectives are listed for reference in attachment 5.)
1	A	SO.1 Accomplished. Report written, distributed and approved by OOD. We are now well into phase of implementing the recommendations in report. FY81 objectives will reflect specific activities designed to strengthen and clarify standards work in SA&T and TOPS.
2	A	S1.1 Six key CCITT, ISO and IEEE committees now have DEC representatives.
2	A	S1.2 Done. Hired G. Robinson.
2	C+	S1.3 Done in Floating Point. Started with Interconnect, Fortran, Cobol.
1	В	S2.1 Working pretty well on ongoing basis. EMOC will help make this easier.
3	I	\$2.2
2	I	S2.3
		S2.4 <u>Done.</u> Small item.
2	I	S2.5 Important to get moving here. Will target Q1 FY81.
2	B+	\$3.2
2	A	S3.3 Done. On schedule.
?	?	S4.1 (I simply lack information here. Will recheck.)
2	A	S5.1 P. White elected to X3/X4 Secretariat Management Committee. Liasion established with NBS.
1	B(?)	S6.2 Work ongoing.

Priority	Assess- ment	Performance Analysis
3	A	P1.1 Progress excellent. Rollins Turner driving this. Review in Q2 impressive. Need new milestones to measure this ongoing effort.
2	В	P1.2 Objective somewhat vague. Add "specifically drive product position metrics into Venus/Hydra and follow up via product review and under contract provide tools to estimate system performance." to operating objective. Initial progress good on Venus, adequate on Hydra.
3		P1.3 Planned to begin in Q4.
2	A	P2.1 Progress good. Have held woods for performance community (not just SPA) and have had quarterly cross-group review.
3	В	P2.2 Good but could be better.
1	A-	P7.1 Completed IBM System/34 analysis. Now taregeted to have VAX-11/780 and Comet compared to HP 3000 and IBM 4331 by Comet announcement. (Very tight schedule but clearly the right thing to be done.)
1	В	P7.2 Most of this work scheduled for completion in Q4. Did push up some positioning on 11/780. (You saw the curves on the OOD afternoon meeting in Framingham.)
2	B+	P4.1 Good progress and feedback to Venus group. Staffing in Hydra has caused some delays here.
2	B (A+ to SRI)	P4.2 Going very well. Expanded scope to include VMS/UNIX comparison (with central funds). Using recent SRI report to drive/accelerate effort. (Aside, what I'd really like to do here is give SRI a few more Megabytes of memory and MBA's and get them to do more on their VMS/UNIX comparison.)
1		P5&6 On schedule. Completion times in Q4.

P8.1 Excellent progress with ECS and ESG workloads. Pending disaster with critical commerical workload. This is a case where we (SPA) are probably being too "matrixed" and need to get clearer commitments or do it ourselves.

ahead of schedule. (Richard Case makes meeting objectives in this area much easier. Now need to begin to plan for

4331 coming in

2

В

**B+** 

В

Ι

3

1

1

P3.1 Just starting. Running as planned.

Excellent progress.

## Technical Strategies

4331-followon work.)

P8.2

T1.1 Accomplished. Both appropriate administration and financial support in place for RAD. Being extended to the other technical review committees. In general, this is enabling RAD members to be more effective technical reviewers and provide better constructive feedback to our Advanced Development efforts.

3

2

2

T1.2 Not done. Behind schedule.

- C-/I T1.3 Not done. Behind schedule. Ad hoc funding methods using RAD for technical review allocated the FY80 funds.
- 2 B--T2.1 This has taken the specific direction of writing and reviewing "chapters" on CAD, Performance Evaluation, and Interconnect. We need but have not started yet a chapter on technology (LSI). Will need to work with PMC and TOPS to resolve full table of contents of a Redbook II. I perceive this spring is not the time to do this. Suggest this becomes an FY81 objective in H1.

С The "Redbook II" of last summer T2.1A has been extensively revised and was published in January 1980 as the "State of Technology" report. Major improvements from July 79 to January 80. More improvements needed before decision to proceed to publish a State of report Technology 03 FY81. in Restructured organization focus to attention and review here.

T3.1 First edition of CAD Redbook out. Plans going in place for second edition this summer to include a coherent as opposed to the de facto CAD strategy. I believe it was a major accomplishment to get this first draft out.

- T3.2 Adequate progress here. Multiplicity of players. We are pushing to resolve the BI/Q22 issue. Interconnect Program understands I still don't perceive my group can step to the side here yet. Still too many loose ends.
  - T3.3 Done. Steve Gutz funded and is working on software technology. Plan to have report and recommendations in Q1, FY81.
- T4.1 (New) Specifically, develop a business plan including strategy, scope, tactics and detailed plans. The detailed plans should be down to extreme detail so as to help manage our focus. (end Q4)

# Foster Innovation and Advanced Development

I1.1 This objective pushed to Q4. After 1/2 year, finally hired a good personnel rep (Maureen Culliton). Now we have the staff to provide the necessary follow through and begin to move ahead.

3

I2.1 Same comment as I1.1.

S.H. Fuller revised 11/28/79

# CHARTER FOR THE SYSTEMS, ARCHITECTURE AND TECHNOLOGY GROUP

Provide the leadership in the basic technical areas and processes necessary for the development of DEC's future products. SA&T manages the architecture and standards process for both hardware and software; develops and coordinates performance analysis activities; leads in the creation and integration of technical strategies; and identifies and sponsors needed new tools and technologies. SA&T is managed by the Technical Director.

## Architecture and Standards

- Identify the key architectures and standards necessary for DEC to succeed in our present and future markets.
- Actively maintain and evolve these interfaces to maximize the leverage of engineering development on new systems.
- Assure products under development are reviewed for conformance with relevant architectures and standards. Clearly identify areas of incompatibility as early as possible.
- o Set the direction for future architectures and standards.
- Performance Analysis
- Provide corporate leadership in development of technical performance metrics, data collection/analysis tools and methodology.
- o Evaluate and record the performance of DEC products against each other and our primary competitors using the technical metrics.
- Review and assist other performance programs as required.
- Develop and apply techniques to optimize and tune DEC systems through the product life cycle.
- Integrate and coordinate performance activities and strategies throughout DEC to provide maximum cooperation and transfer of information.

Technical Strategies

- Develop and review technical product strategies, technology and tools.
- Review new base technologies and competitive products.
   Understand how these new developments impact our ongoing strategies. Sponsor the introduction of the right new technologies.

2.2

#### GOALS FOR SYSTEMS, ANALYSIS AND TECHNOLOGY GROUP

## Architecture

- Al.(H) Assure all major hardware and software projects are reviewed for conformance with key architectures, standards, and technical strategies. Develop validation techniques to improve our ability to test conformance.
- A2.(H) Manage the VAX-ll architecture with the knowledge it is DEC's mainstay machine language architecture for the next 20 years.
- A3. Manage the PDP-ll architecture with the knowledge it is an excellent, mature machine language architecture for small applications. It should not evolve to overlap with VAX-ll size applications.
- A4.(H) Identify and manage other architectures/standards/interfaces DEC should use given the following constraints:
  - o Maintain maximal freedom for implementors.
  - o "Firewall" as much of Engineering and Customer development investments as possible.
  - Understand how to establish architecture control for all these key architectures (with Software Engineering).
- A5. Initiate advanced development in the architecture area such that VAX remains a viable architecture  $\geq 20$  years.

#### Standards

- Sl.(H) Ensure continuity and representation on important national and international standards committees.
- S2.(H) Ensure, to the limits of DEC ability, that external and DEC standards will be technically sound and that they will have a positive impact on our customers.
- S3.(H) Strengthen the voluntary standards process to minimize government regulations.
- S4. DEC should take the initiative in the early definition stages of ANSI and government standards.
- S5. Manage the evolution of DEC hardware and software standards.
- S6. Insure that development groups participate in and support appropriate standards.

OOD Contracts FY80 Page 4

S7. Ensure that we give accurate information to customers about conformance to standards.

## Performance Analysis

- Pl.(H) Define/assist/review principal performance metrics for DEC systems and major components. Use metrics to set goals for new products. Review products under development on these metrics.
- P2.(H) Continue to provide means of coordinating performance methods, tools and studies.
- P3. Investigate and develop methods to analyze the performance of Data bases and networks.
- P4.(H) Conduct performance analysis and modeling support for various organizations within DEC. (This is cross funded.)
- P5. Continue to develop hardware/software performance measurement tools for a variety of our products as needed to carry out performance studies.
- P6. Begin development of data analysis tools to reduce and interpret performance data.
- P7.(H) Conduct specific measurement and analysis studies of select products in order to determine how our products compare to each other and our primary competitors. (Majority of this is cross funded.)
- P8. Set up a product positioning process and a competitive analysis lab.

Technical Strategies

- Tl.(H) Develop processes to review/guide investments in advanced development, analysis, and tools. Do this by providing leadership and direction for the technical committees: RAD, Cross Systems, CAD Committee, Software Tools, and Engineering Committee.
- T2. Produce Redbook II and make it as effective for management overview and decision making as Redbook I now is. Identify the important hardware and software technologies for DEC's continued success. Evaluate where we are on each of these technologies. Recommend and sponsor action (or non-action) to get where we need to be.
- T3. Work on the most critical technical strategies.

æ

OOD Contracts FY80 Page 5

• '

.

۲

revised 11/28/79

-

Processes to Foster Innovation and Advanced Development

- Il.(H) Establish open lines of communication between Consulting Engineers and technical director. Establish an active role for consultants in technical decision making at DEC.
- 12. Make Engineering a more exciting/attractive place for high quality, technical talent.

# OPERATING OBJECTIVES FOR SA&T

The objectives given below are numbered to match SA&T goals. E.g., AX.Y is the Yth objective corresponding to goal AX. In a number of cases, success of the objective is dependent on a crossOOD committee and in such cases the committee is stated rather than an OOD group.

## Architecture

1

		Joint With	Time
A1.1	Get Architecture and Standards conformance as part of Hardware and Software reviews. (Unstaffed/ unfunded).	Operations	FY80
A1.2	Work with SQM on conformance testing in programming languages and data interchange.	S/W Eng.	Q2-lang. Q3-data
Al.3	Participate in review process for projects that implement important standards or architectures.	OOD	ongoing
A2.1	Continue the architecture management of the VAX-ll architecture.	VAXB	ongoing
A2.2	Develop the neccesary addition tools and initiate the architecture characterization of the VAX-11 architecture.		Q4
A2.3	Complete the writing of SRM. Specifically, document the defacto architecture features in the memory management and I/O areas.		Q2
A2.4	Establish an architecture verification procedure for the VAX-11 architecture. Build on the success of the AXE program for Comet.		Q2 (Comet) Q4 (Nebula)
A3.1	Continue and strengthen architecture management of the PDP-11 Architecture.		Q3
A4.1	Develop the needed I/O Architecture for our future products.	Dist. Proc.	Q3
A4.2	Identify the set of DEC's key architectures and a process for their management.	S/W Eng.	Q2
OOD ( FY80 Page	Contracts 7	revised 11/28/79	
-----------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------	----------------
		Joint With	Time
A4.3	Start to understand the economic impact of standards conformance/ nonconformance	Finance	Q3
A4.4	Recommendation on which FIPS we will follow.		Q3
A5.1	Hire 1 to 2 people and get advanced development activity started in Architecture group.		Q4
Stan	dards		
S0.1	Resolve organizational interdependence, holes, and overlap with Technical Operations Group (John Holman).	TOPS	Q2
S1.1	Get representation on ANSI Communications committees, ANSI I/O Interface committee and CCITT.	Dist. Proc., Eur. Eng.	Q2/Q3
S1 <b>.</b> 2	Establish an industry standards hardware function within CC 366.		Q3
S2.2	Define the DEC strategy for each industry standards committee and operate against that strategy for FY80.	S/W Eng., CSD, MSD, MS, LSG	Q2 <b>/</b> Q3
S3.1	Support DECUS participation on ANSI committees.		ongoing
S4.1	Become the NBS contact with DEC. Input to NBS 5-year plan.		Q2
S4.2	Get DEC involved in definition of ANSI and ISO distributed systems architecture and distributed database standards and guidelines.	Dist. Proc./ S/W Eng.	Q3
S5.1	Get existing DEC architectures to be DEC STDS. (VAX SRM, VAX Calling Standard, Escape Registration, ODS-2).	S/W Eng., Eng. Comm.	Q3 <b>/</b> Q4
S5.2	Maintain existing DEC language committees (COBOL, BASIC, PASCAL). Analyze need for committees on standards for other languages marketed by DEC.	S/W Eng.	ongoing

• • •

,

OOD Contracts FY80 Page 8

-			
		Joint With	Time
S6 <b>.</b> 1	Ensure that relevant development groups have approved standards objectives in their beige books.		Q2
S6.2	Establish standards office in Tewksbury/Spitbrook.		Q2
S6.3	Continue to publish updates to Software Standards Notebook, Standards Summary, and standards sections of Systems Software Information. Investigate automated standards index.		ongoing as scheduled
S7.1	Inform salespeople via Sales Update, Product Line information bulletins, standards information in SPD's. Investigate automated conformance data.		Q2, Q3, Q4
Perf	ormance Analysis (in priority order)	Joint With	Time
P1.1	Develop performance metrics for the real time market place to be used in support of the product positioning efforts.		Q3
P1.2	Use the product positioning metrics (used in existing products) in analyzing design tradeoffs.		Q4
P1.3	Identify and develop other performance metrics usable in product positioning such as "functionality', ease of use, etc.		Q4
P2.1	Continue developing the performance newsletter, performance library, <u>quarterly</u> half-day symposiums, performance notebook, performance steering committee, and various other performance communication efforts.		ongoing
P2.2	Keep abreast of the current performance techniques and in touch with University/Government/Industry to be aware of current research in performance analysis techniques.		ongoing

P3.1 Identify the scope of performance problems in networking our systems and conduct some studies in our lab which will help identify what tools and methods are needed. In addition, investigate the use and limitations of our current data collections tools in a network environment (DIAMOND, SIM11, RTES, etc.) Then work to coordinate network performance analysis.

#### Technical Strategies

#### STANDARDS GOALS AND OBJECTIVES

#### GOALS

- (H) Ensure, to the limits of DEC ability, that S1 external and DEC standards will be tecnnically sound and will have a positive impact on our products.
- (N) Ensure that development groups participate in and S2 support appropriate standards. Review all major products for standards conformance.
- Ensure that we give accurate information about product S3 conformance to customers and to DEC employees.
- S4 DEC should take the initiative in the early definition stages of industry and government standards.
- Strengthen the voluntary standards process to minimize \$5 government regulation.
- Sΰ Manage the evolution of DEC hardware and software standards.

OBJECTI	IVES	<u>Joint with</u>	Time
SU.1	Resolve organizational overlap, interdependence, and holes with TOPS (Jonn Holman).	TOPS	Q2
\$1.1	Get representation on ANS1 communications committees, 1/0 Interface, and CC1TT.	Dist. Proc. Eur. Eng.	Q2/Q3
\$1.2	Establish an industry standards naroware function within CC 300.	-	Q3
S1.3	Define DEC strategy for each industry committee and operate against that strategy.		Q2/Q3
S2.1	Get standards review as part of Hardware/Software reviews.	Operations	Ongoing

So.1	Get existing DEC architecture to be DEC Stds. (VAX SRM, VAX Calling Standard, Escape Registration, GDS-2).	S/W Eng.	Q3/Q4
Sv.2	Maintain existing DEC language committees (COBOL, BASIC, PASCAL) Analyze need for other language committees.	S/W Eng.	ongoing

٠

. مىرى:

* revised ** new objective

- S.1 Ensure continuity and representation on important national and international standards committees.
- <u>Reason:</u> This is really a means of achieving our second goal of ensuring that external standards are sound and nave a positive impact on our products. Being on a committee is not a goal in itself.
- A4.4 Recommendation on which FIPS we will follow.
- <u>Reason:</u> Part of larger objective of incorporating standards objectives in development strategies.
- S3.1 Suuport DECUS participation on ANS1 Committees.

<u>Reason:</u> Not a measurable objective.

S4.1 become NBS contact with DEC.

<u>Reason:</u> Trival.

Subject: Development Planning Document for Sam Fuller

To:	Gordon Bell	Date:	30 May 80 🗥
	Larry Portner	From:	Sam Fuller States
		Dept:	Systems, Arch., & Technology
		Ext.:	8-223-4562
		Loc.:	ML3-5/033

Below are my responses to the nine questions, asked in the IDP report (page 4 of IDP is attached).

- Log of Positions Held to Date:
  - Technical Director and Group Manager of the Systems Architecture and Technology Group, Central Engineering; June 1979 to present.

- o Senior Engineering Manager of the VAX/PDP-11 Architecture Group, Central Engineering; January 1978 to June 1979.
- (For education and employment prior to Digital, see attached resume.)

2. Significant Developmental Experiences:

- Organizational development and management of the Systems Architecture and Technology group. June 1979 to present.
- Leading and/or participating in <u>ad hoc</u> task forces: Hydra, Interconnect, VAX Port Architecture, Interconnect Software Architecture, etc.
- General management, leadership, and fund raising in Washington for the Cm* project (CMU), 1975 - 1977.
- o Designing and then running the performance evaluation effort on C.mmp (CMU), 1973 - 1976.
- Conceptual definition of and then leading the architecture evaluation work for Army/Navy CFA project, 1975 - 1977.
- University committee work: curriculum committee, undergraduate program, new computer system evaluation. etc.

- o Participation on assorted National Science Foundation, National Institute of Health, Department of Defense and IEEE review groups.
- o Writing a PhD thesis, 1971 1972.
- o Course at Stanford University on Managing Research and Development, 1970.
- Working within the IBM (1971) and Hewlett Packard (1969) research labs.
- Working in the Department of Defense R&D labs, 1967
   1968.

3. Examples of successful job performance:

- VAX architecture evaluation program. Skills: motivated to solve an immediate problem (debugging Comet microcode); willingness to push ahead in the face of various technical criticism.
- VAX system configuration program. Skills: recognizing how a new and untried tool could be applied to a new problem; willingness to sponsor a new idea.
- 3. Driving DEC task forces to conclusion. Skills: willingness to write; pushing on follow-through; ability to guide direction of task force.
- 4. Major, successful review of Cm* project in Jure 1977. Skills: pull a loosely knit group together to complete, measure, document, then demonstrate a major piece of applied research.
- Architecture metrics for Army/Navy Study. Skills: Motivation to solve/quantify immediate problem, willingness to push ahead in the face uncertainties.
- 6. Forty plus technical articles. Skills: continually exploring new ideas; technical writing; analytic models; interest in developing, measuring, and reporting on prototype computer systems (e.g. C.mmp and Cm*).
- 7. PhD thesis on drum and disk performance. Skills: analytic (mathematical) methods; motivation to collect real data rather than assume idealized distributions; technical writing; programming; independently motivated.

. . . . .

#### 4. Current Job Responsibilities:

- o General management of SA&T (major responsibility).
- Technical review of major, high risk efforts.
   (Either lead review myself of organize a review group.)
- Initiate new programs (both inside and outside SA&T, e.g. XCON, AXE, Fiber optic ICCS, Ethernet, etc.).
- o Recruit and hire key technical contributors.
- Provide technical perspective to 00D discussions and reviews.

#### 5. Basic Skills:

#### Technical:

Hardware: good Architecture: strongest Mechanical: average Optical: average Applied mathematics: strong Programming systems: strong Applications programming: average

#### Management:

Planning: average Leading: strong Organizing: average Control: weak Measure: average

#### Innovation:

Idea generation: strong Idea sponsorship of other's ideas: strongest University contact/review: strong

#### 6. Goals and Aspirations:

- o Initiate, lead and drive to successful conclusion new concepts that result in a product or design process.
- o Recruit the brightest people.
- Develop and nurture a group capable of being innovative and productive.

Success is accomplishing one and hopefully more than one of the above and getting some recognition for the accomplishment.

Development Planning Document for Sam Fuller

- 7&8. DEC of the future and assignments I might have. (I've combined 7 and 8 since I'm not sure how to treat either one separately.)
  - Strengthening of the architecture (software plus hardware) function within engineering and leading that group as part of SA&T.
  - Organization of systems engineering/systems techniques group that would include performance, testing, systems modeling for reliability, availability, etc, and developing it as a part of SA&T.
  - o Develop and lead a rejuvenated research group.

• Watch for opportunity to manage through to shipment some hardware or software product.

I believe I can take on the above items at basically year intervals.

#### 9. Development Needs/Plans:

0

 I've taken two management development seminars since coming to DEC. I believe I should consider taking several more.

I don't believe it makes sense for me to take any more technical courses. However, I probably should continue and maybe increase my attendance at major conferences and visits to universities.

#### October 5, 1977

#### General Information

Address:

3208 Science Hall Department of Computer Science "Carnegie-Mellon University Pittsburgh, PA 15213

Phone:

Birthdate:

(412)-578-2574 June 1, 1966

Marital Status: Married

Number of children: Three

Citizenship: U.S.A.

Social Security Number: 362-50-1540

#### Education

University	Attended	Degree	Field
University of Michigan	1964 1968	B.S.	Electrical Engineering
Stanford University	1968-1969	M.S.	Electrical Engineeric
Stanford University	1969 1972	Ph.D.	Electrical Engineeric and Computer Science

#### Employment

Associate Professor of Computer Science and Electrical Engineering, Carnegie-Mellon University, 1975 to present.

Assistant Professor of Computer Science and Electrical Engineering, Carnegie-Mellon University, 1972-1975.

ł

#### Areas of Professional Interest

Computer Architecture, Performance Evaluation of Computer Systems, and Multiprocessor Computer Structures.

#### Consulting Activities

Digital Equipment Corporation, Maynard, MA, 1974-1975, 1977.
Naval Research Laboratory, Washington, DC, 1973-.
Compu-guard Security Systems, Pittsburgh, PA, 1975-1976.
National Cash Register Corporation, Cambridge, OH, 1975.
Duquesne Systems, Inc., Pittsburgh, PA, 1975-.
U. S. Army Redstone Arsenal, AL, 1976-1977.
U. S. Army Electronics Command, Ft. Monmouth, Ed, 1975-.
Honeywell Information Systems, Phoenix, AZ, 1977.

#### Summer Positions

National Security Agency, Fort Mende, MD, 1967, 1968. Hewlett Packard Laboratories, Palo Alto, CA, 1969. IBM Thomas J. Watson Research Center, Yorktown Heights, NY, 1971.

#### Professional Societies and Activities

Member of ACM and IEEE.

An editor of the Computer Systems Department (Measurement/Performance Evaluation) of the Communications of the ACM, 1972-.

Chairman of the Subcommittee on Storage System Analysis of the IEEE Computer Society Technical Committee on Mass Storage, 1973-1975.

Member of IEEE Task Force to Define Curriculum in Computer Architecture, 1974-1975.

Member of the Hardware Systems Panel of the NSF Computer Science and Engineering Research Study (COSERS), 1975-1977.

Member of the Office of Maval Research Review Panel, 1976-.

Member of the Committee on Recommendations for the U.S. Army Basic Scientific Research, 1977-.

Editor (with Gordon Bell and Daniel Siewiorek) of the special is se of the <u>Communications</u> of the <u>ACM</u> on the evolution of major computer architectures to appear, January, 1978.

#### Honors and Fellowships

General Motors Scholarship, University of Michigan, 1964-1968. Scott Paper Co. Award, University of Michigan, 1966-1968. National Science Foundation Fellowship, Stanford University, 1968-1970. Hertz Foundation Fellowship, Stanford University, 1970-1972. Tau Beta Pi; Eta Kappa Nu; Phi Kappa Phi; Sigma Xi.

#### S.H. Fuller revised 11/28/79

#### CHARTER FOR THE SYSTEMS, ARCHITECTURE AND TECHNOLOGY GROUP

Provide the leadership in the basic technical areas and processes necessary for the development of DEC's future products. SA&T manages the architecture and standards process for both hardware and software; develops and coordinates performance analysis activities; leads in the creation and integration of technical strategies; and identifies and sponsors needed new tools and technologies. SA&T is managed by the Technical Director.

#### Architecture and Standards

- Identify the key architectures and standards necessary for DEC to succeed in our present and future markets.
- Actively maintain and evolve these interfaces to maximize the leverage of engineering development on new systems.
- Assure products under development are reviewed for conformance with relevant architectures and standards. Clearly identify areas of incompatibility as early as possible.
- o Set the direction for future architectures and standards.

#### Performance Analysis

- Provide corporate leadership in development of technical performance metrics, data collection/analysis tools and methodology.
- Evaluate and record the performance of DEC products against each other and our primary competitors using the technical metrics.
- Review and assist other performance programs as required.
- Develop and apply techniques to optimize and tune DEC systems through the product life cycle.
- Integrate and coordinate performance activities and strategies throughout DEC to provide maximum cooperation and transfer of information.

Technical Strategies

- Develop and review technical product strategies, technology and tools.
- Review new base technologies and competitive products. Understand how these new developments impact our ongoing strategies. Sponsor the introduction of the right new technologies.

- Assure development projects are reviewed for consistency with product and technology strategies.
- Understand how new technologies should be introduced in Engineering, Manufacturing, and Field Service.

Processes to Foster Innovation and Advanced Development

o Sponsor the technical review committees:

- RAD, CAD Comm., Cross Systems Committee, Software Tools.
- Sponsor Consulting Engineers and other "technical gatekeepers".

#### GOALS FOR SYSTEMS, ANALYSIS AND TECHNOLOGY GROUP

#### Architecture

- Al.(H) Assure all major hardware and software projects are reviewed for conformance with key architectures, standards, and technical strategies. Develop validation techniques to improve our ability to test conformance.
- A2.(II) Manage the VAX-11 architecture with the knowledge it is DEC's mainstay machine language architecture for the next 20 years.
- A3. Manage the PDP-11 architecture with the knowledge it is an excellent, mature machine language architecture for small applications. It should not evolve to overlap with VAX-11 size applications.
- A4.(H) Identify and manage other architectures/standards/interfaces DEC should use given the following constraints:
  - o Maintain maximal freedom for implementors.
  - "Firewall" as much of Engineering and Customer development investments as possible.
  - Understand how to establish architecture control for all these key architectures (with Software Engineering).
- A5. Initiate advanced development in the architecture area such that VAX remains a viable architecture > 20 years.

#### Standards

- Sl.(H) Ensure continuity and representation on important national and international standards committees.
- S2.(H) Ensure, to the limits of DEC ability, that external and DEC standards will be technically sound and that they will have a positive impact on our customers.
- S3.(II) Strengthen the voluntary standards process to minimize government regulations.
- S4. DEC should take the initiative in the early definition stages of ANSI and government standards.
- S5. Manage the evolution of DEC hardware and software standards.
- S6. Insure that development groups participate in and support appropriate standards.

00D Contracts FY80 Page 4

S7. Ensure that we give accurate information to customers about conformance to standards.

#### Performance Analysis

- Pl.(H) Define/assist/review principal performance metrics for DEC systems and major components. Use metrics to set yoals for new products. Review products under development on these metrics.
- P2.(H) Continue to provide means of coordinating performance methods, tools and studies.
- P3. Investigate and develop methods to analyze the performance of Data bases and networks.
- P4.(H) Conduct performance analysis and modeling support for various organizations within DEC. (This is cross funded.)
- P5. Continue to develop hardware/software performance measurement tools for a variety of our products as needed to carry out performance studies.
- PG. Begin development of data analysis tools to reduce and interpret performance data.
- P7.(H) Conduct specific measurement and analysis studies of select products in order to determine how our products compare to each other and our primary competitors. (Majority of this is cross funded.)
- P8. Set up a product positioning process and a competitive analysis lab.

#### Technical Strategies

- T1.(H) Develop processes to review/guide investments in advanced development, analysis, and tools. Do this by providing leadership and direction for the technical committees: RAD, Cross Systems, CAD Committee, Software Tools, and Engineering Committee.
- T2. Produce Redbook II and make it as effective for management overview and decision making as Redbook I now is. Identify the important hardware and software technologies for DEC's continued success. Evaluate where we are on each of these technologies. Recommend and sponsor action (or non-action) to get where we need to be.

T3. Work on the most critical technical strategies.

00D Contracts FY30 Page 5

revised 11/28/79

Processes to Foster Innovation and Advanced Development

- Il.(H) Establish open lines of communication between Consulting Engineers and technical director. Establish an active role for consultants in technical decision making at DEC.
- 12. Make Engineering a more exciting/attractive place for high quality, technical talent.

OOD Contracts FY80 Page S

revised 11/28/79

#### OPERATING OBJECTIVES FOR SA&T

The objectives given below are numbered to match SA&T goals. E.g., AX.Y is the Yth objective corresponding to goal AX. In a number of cases, success of the objective is dependent on a crossCOD committee and in such cases the committee is stated rather than an COD group.

Archi	-	Joint With	Time
A1.1	Get Architecture and Standards conformance as part of Hardware and Software reviews. (Unstaffed/ unfunded).	Operations	FY80
A1.2	Work with SQ4 on conformance testing in programming languages and data- interchange.	S/W Eng.	Q2-lany. Q3-data
A1.3	Participate in review process for projects that implement important standards or architectures.	OCD	ongoing
A2.1	Continue the architecture management of the VAX-11 architecture.	VAXB	ongoing
A2.2	Develop the neccesary addition tools and initiate the architecture characterization of the VAX-11 architecture.		Q4
A2.3	Complete the writing of SNM. Specifically, document the <u>defacto</u> architecture features in the memory management and I/O areas.		Q2
A2.4	Establish an architecture verification procedure for the VAX-11 architecture. Build on the success of the AXE program for Conet.	 î	Q2 (Comet) Q4 (Nebula)
A3.1	Continue and strengthen architecture management of the PDP-11 Architecture.	·	Q3
A4.1	Develop the needed I/O Architecture for our future products.	Dist. Proc.	Q3
A4.2	Identify the set of DEC's key architectures and a process for their management.	S/W Eng.	Q2

OOD Contracts revised 11/28/19 FY80 Page 7 Joint With Time A4.3 Start to understand the economic Finance Q3 impact of standards conformance/ nonconformance Q3 A4.4 Recommendation on which FIPS we will follow. A5.1 Hire 1 to 2 people and get advanced Q4 development activity started in Architecture group. Standards TOPS Q2 **S0.1** Resolve organizational interdependence, holes, and overlap with Technical Operations Group (John Holman) . S1.1 Get representation on ANSI Dist. Proc., Q2/Q3Communications committees, ANSI Eur. Eng. I/O Interface committee and CCIPF. S1.2 Establish an industry standards 03 hardware function within CC 365. S2.2 Define the DEC strategy for each Q2/Q3S/W Eng., CSD, MSD, industry standards committee and operate against that strategy for MS, LSG FY80. S3.1 Support DECUS participation on ongoing ANSI committees. S4.1 Become the NBS contact with DEC. 02 Input to NBS 5-year plan. S4.2 Get DEC involved in definition of Dist. Proc./ 03 ANS1 and ISO distributed systems S/W Eng. architecture and distributed database standards and guidelines. S5.1 Get existing DEC architectures to Q3/Q4S/W Eng ... be DEC STDS. (VAX SRM, VAX Calling Eng. Comm. Standard, Escape Registration, OD3-2). S5.2 Maintain existing DEC language ongoing S/W Eng. committees (COBOL, BASIC, PASCAL). Analyze need for committees on standards for other languages marketed by DEC.

revised 11/28/79

Page 8		
	Joint With	Time
S6.1 Ensure that relevant development groups have approved standards objectives in their beige books.	<b></b> .	Q2
S6.2 Establish standards office in Tewksbury/Spitbrook.		Q2
S6.3 Continue to publish updates to Software Standards Notebook, Standards Summary, and standards sections of Systems Software Information. Investigate automated standards index.	<b></b>	onjoinj as scheduled
S7.1 Inform salespeople via Sales Update, Product Line information bulletins, standards information in SPD's. Investigate automated conformance data.		Q2, Q3, Q4
Performance Analysis (in priority order)	Joint With	Time
Pl.1 Develop performance metrics for the real time market place to be used in support of the product positioning efforts.		Q3 .
Pl.2 Use the product positioning metrics (used in existing products) in analyzing design tradeoffs.	 -	Q4
Pl.3 Identify and develop other performance matrics usable in product positioning such as "functionality', ease of use, etc.		Q4
P2.1 Continue developing the performance newsletter, performance library, <u>quarterly</u> half-day symposiums, performance notebook, performance steering committee, and various other performance communication efforts.		ongoing
P2.2 Keep abreast of the current performance techniques and in touch with University/Government/Industry		ongoing
to be award of current research in performance analysis techniques.	•	· .

, A

FY00 Page 9	revised 11/28/79	
	Joint With	Time
P7.1 Conduct specific measurement and analysis studies on HP and IBM. In particular, conduct performance measurements of HP and IBM's time-sharing capabilities.	ompetitive Analysis Committee	ongoing
P7.2 Conduct specific measurement and analysis studies on DEC-relatel: products which are either prototyped or currently exist. The intent of the studies is to provide simple display of our products price/performance in different environments and hardware/software configurations. Most are cross-funded. Central funded studies are: 11/23 RSTS/e V7 11/23 RSTS/e V7 11/23 RSTS/E V7 24 11/34 RSTS/E V7 24	Tw-Product Management ese	ongoing
P4.1 Conduct modeling/analysis support to Hydra, Venus, and other new systems. Develop a reliability and performance tool in support of Hydra.	Hydra/Venus	onjoing
P4.2 Develop a technique to size and tune DEC products. Prototype it on UNIX since Telco funded.	Telco Eng.	Q4
<pre>P5&amp;6 Performance Tool development     VMS Event Trace     Portable RTE     Diamond 11/780 Interface     General Trace Reduction for         Analysis     RTE Data Reduction     WMS Workload Char. Tool</pre>	LSG (Depace) S/W Tools 	Q4 Q4 Q4 Q4 Q4 Q4
P8.1 Obtain "corporate" representation benchmarks of specific market areas used for product positioning.		ongoing
P8.2 Coordinate the acquisition of competitive systems where appropriate in order to set up a corporate competitive analysis lab.	Competitive Analysis Committee	ongoing

OOD Contracts FY80 Page 10

revised 11/28/79

Joint With

P3.1 Identify the scope of performance problems in networking our systems and conduct some studies in our lab which will help identify what tools and methods are needed. In addition, investigate the use and limitations of our current data collections tools in a network environment (DIAMOND, SIM11, RTES, etc.) Then work to coordinate network performance analysis.

#### Technical Strategies

		Joint With	Time
<b>T1.</b> 1	Review and provide necessary admin- istrative support for operations of RAD committee.	RAD	Hl
T1.2	Review charter of Engineering Committee and get it revitalized.	т.о.	Q2/Q3
<b>T1.</b> 3	Make the Cross-Products Committee operational in Q2 FY30 and review proposal and allocate funds by February 1930.		Q2
T2.1	Review and accelerate Redbook II development in Q2 FY80. Publish next Redbook II with purpose of making it as useful for management and investmen decisions as Redbook I.	T.O.	Q2/Q3
T3.1	Establish a CAD strategy and program for engineering development and have it in place in time for FY81 funding decisions.	T.O. & MPD	Q2/Q3
T3.2	Continue to assist Distributed Processing Group in Interconnect. Specifically, get a decision on whether or not to use Ethernet for NI; get initial BI specification	Dist. Proc.	FY80

agreed to by end of Q2 FY80; scope the LSI efforts that must be put in place to support the N1, BI, and CI. -- ongoing

Time

OOD Contracts FY80 Page 11

### revised 11/28/79

Time

Q2/Q3

Joint With

T3.3 Charter one or two software engineers	s s/w	Eng.
to develop an overview of essential		
software technologies. In particular	,	
focus on ongoing advanced development	2	
activities and work with S/W		
Engineering on which ones should be		
initiated.		

#### Processes to Foster Innovation and Advanced Development

- Il.1 Inventory our personnel strengths -- Q3 and weaknesses in all the important technical areas.
- 12.1 Develop and propose some specific Personnel H2 actions to make DEC more exciting for technical talent.

Holman

# INTEROFFICE MEMORANDUM

TO:	Gordon	Bell,	Larry	Portner
-----	--------	-------	-------	---------

DATE: 26 March 1980 FROM: John Holman DEPT: Technical Operations EXT: 3-5533 LOC/MAIL STOP: ML12-2/T36

**RAP** Information SUBJ'

Please find an attachment of commentary against goals and objectives. The overall grade appears to be an A- based on the following:

Responsibilities		-A
<b>O</b> bjectives Negotiated	-	-A
Other Accomplishments		Α

We have put a lot of emphasis on advance development in Straka and Tays' groups. They are building this activity and are making sure that it is part of the planning.

The key thing for me to resolve in Q4 is a way to delegate more responsibility for planning and administration while getting higher quality space plans.

The major problem for me has been space planning. Until February, I had been expecting (from September Jungle) that I would not own the overall geographic strategy and plan. Today, I own it and am pressing very hard to catch up. It is, however, diverting attention from the goals list. Fortunately, we have some good managers who feel that they have some clear goals and are trying to hit them.

#### Technical Operations Group (TOPS) Charter

The Technical Operations Group is chartered to provide central focus and leadership in the development of products, tools, controls, services and records which cross all engineering operations. The group is responsible for the management of the engineering process and is the keeper of the engineering records. Additionally, the group is responsible for critical resource management, i.e. facilities planning, Maynard facilities and computer operations.

Technical Operations has a functional responsibility for operations in each engineering site and a direct responsibility for the subject operations in Maynard.

#### Common Products

- Power Supplies and Power Distribution development from advance development through product support for mature products.
- Packaging Engineering includes Central Mechanical Engineering, Corporate Enclosures, Industrial Design, Interconnect Hardware Engineering and Industrial Package engineering (shipping containers).
- Development of Diagnostic Operating Systems to be used by all engineering sites.

#### Engineering Tools

 Development and support of computer aided design tools (CAD) which include circuit design, mechanical design, simulation tools and analysis tools.

#### Controls

- Provide Engineering Design assurance through standards development, International regulations, consulting, records, product safety, auditing and testing.
- Develop and maintain a design review system through the office of the Chief Engineer.
- Develop and operate the Engineering Product Library System (EPLS).
- Development and operation of the Engineering release process through appropriate control documents and management review.
- Operate testing laboratories, i.e. Accoustics, EMI/RFI, Environmental, Materials Analysis, Thermal Analysis, Systems Evaluation.

n na serie e serie e serie e serie e serie serie serie serie serie serie e serie e serie e serie e serie e serie

Technical Operations Group Charter

Controls (cont'd)

- Maintain a product performance data base.
- Provide metrics development for all functional management described in this document.
  - Engineering Services
  - Diagnostic Engineering
  - Power Supply Engineering
  - Computer Operations
  - Reproduction Centers
- Provide Control and Operation of a Document Control File.
- Establish and maintain a system of Product Nomenclature which serves Digital's future needs.

Services

- Provide consulting engineering to all of Central Engineering in each of the specialties of the groups, i.e. Acoustics; Thermal; Power; RFI/EMI; Mechanical Design; Packaging; Analog bus integrity; Industrial Design; CAD; Mechanical Interconnect; Diagnostic Development; International Regulations; MTBF calculations; Human Factors Engineering.
- Provide Engineering Design Services to the greater Maynard (the Mill and Acton)engineering community.
- Maintain a current engineering records library which includes, but is not limited to, a Document Control File, Product Information, and product status. Develop appropriate systems and media to document design definitions.
- Provide CAD training to all sites.
- Provide CAD system libraries.
- Provide testing laboratories where economics dictate common laboratories for:

Acoustics; EMI/RFI; Environmental; Materials Analysis; Thermal Analysis; Systems Evaluation.

- Provide an engineering Model shop for the construction of prototype model products.
- Establish plans for future engineering facilities and carry the plans to execution.
- Operate engineering facilities in Maynard.

2.

Technical Operations Group Charter

Services (cont'd)

- Provide and operate computer facilities for central records keeping, CAD development and software operations in the Mill.
- Provide a central resource to manage our telecommunications projects and facilities related to teleconferencing, Timesharing computer service and computer networks.

#### Manufacturing Interface

 ${}^{()}$ 

- Identify and actively manage the interface process between Engineering and Manufacturing.
- Develop mechanisms to assure that information flows in a timely way without bottlenecks.
- Provide technology leadership in packaging which includes long range forecasting to Manufacturing regarding changes in packaging technology and new process requests.
- Provide leadership and focus to the Manufacturing/Engineering Committee.

- Achieve plans which are stated in each Beige Book.
- Generate a Long Range Plan for the Technical Operations Group by Q4.
- Drive decentralization process to completion by:
  - A. Decentralize Power Supply Applications Engineering
  - B. Develop Engineering Services Metrics which provide consistent measure of all E.S. at all sites.
- Develop Functional Leadership for decentralized organizations through planning, coordination, metrics, training, consulting, strategy formulation.
- 5. Build a design assurance function which is clearly differentiated from design and design services. This implies that appropriate processes and standards will exist and be monitored to assure producible, maintainable products salable in our chosen markets, and limit Digital's exposure to product liability claims related to design flaws and external requirement oversights.
  - A. Build a data base to track standards conformance
  - B. Develop a coherent standards process between OOT and TOPS
- 6. Build an organization structure to implement agreed charter, goals and strategy by Q2.
- Assure user involvement in tools development in order that the tools will have maximum utility.

#### Technical Operations Group (TOPS) GOALS

- 8. Develop Metrics for each function.
- 9. Work with Finance organization to simplify the accounting process which is very different within the TOPS organization for reasons of history.
- Develop a coherent strategy for the management of printed circuit design which includes CAD, subcontracted CAD, Manufacturing interface, and design turnaround time.
- 11. Improve the organization climate through:
  - A. A human resource planning and development system
  - B. Team building between TOPS and sites
  - C. Appropriate sponsorship
  - D. Clarification of Goals and Strategies.
  - E. Management development and training
- 12. Develop a Mechanical Engineering focus
  - A. Develop a focal point around mechanical CAD
  - B. Develop a strategy
- 13. Develop a mechanical interconnect strategy and implementation to support DEC's interconnect strategy.
- Develop facilities plans to support Engineering
   5 year plan.
- 15. Improve the operation and maintenance of the Mill.

b.

a. A on trend

#### ORGANIZATION GOALS - COMMENTS

#### 1. Clear Viable Charter

#### Status

```
Marlboro - Long term not clear

DPP - Dockser and Si getting agreement with Demmer and BJ

MK - Ok

Small Systems and Terminals - there but not solid

Tools and Architecture - Ok, change target

ESE - needs a major focus

End of Q1 for final long term space and charter definition.
```

2. Stable, Low Hassle Environment

#### Status

```
    Troops feel lousy.
        *Hudson - disaster.
        *Merrimack - still feel like Commercial Group is out to
stop rather than help. Roger's new role should help.
        *Marlboro - Cut in S/W will be severe.
        *Tewksbury - Spent Easter getting out VMS/to see no one wanted it.
```

Note on this category:

#### NEW METHOD

Software Engineering is going to push back on any new processes until it has been tested and I know why we're doing it.

NEW B.J. OBJECTIVE

- 1) Get to the point I know how to measure software planning, Product Management and simple, achievable measures for Mileski.
- 2) Solve the DECnet, Operating System, DPP charter hassle.

#### PROCESS GOALS - COMMENTS

4. Install, Etc., Arch. Process

#### Status

#### Charters

*moving in right direction

- Terminals definition started
- Languages in place
- Interconnect started
- VMS Organizing to get it
- Information Management slow.

#### Staffing

*offer out to Dr. Patel *person coming on board

5. Install Quality Eval. Process

#### Status

This area is moving well with the exception of the statiscal analysis. *RPG - done Medical - ball is out of my court.

- -
- 6. Focus on Bus. Plans/Profitability

On hold, pending system focus for product management.

7. Support Systems Focus

#### Status

- 1. done, out for approval
- 2. SPU slots filled
- 3. done
- 4. Kapadia process is working Will work with Grant on Mass Storage coordination.
- 8. Software Services

#### Status

No progress, in fact, Bruno is attempting to get out of his commitment at Operations Review.

#### PEOPLE GOALS - COMMENTS

9. Hudson & Spit Brook Well

#### Status

----

```
Spit Brook - going well.
Hudson - OOD blew it badly. We've lost credibility. Still
recovering organizationally.
Marlboro - no move planned.
```

10. College Hire Program

No comment.

11. Affirmative Action

Meeting our goals

12. Fun Place to Work

Status

*There are too many people saying "no you can't because it isn't the process" as opposed to "yes it makes sense to do it this way".

*Hydra may be a regular project if we let it alone.

13. Tenure in Management

No comment.

#### PRODUCT GOALS - COMMENTS

14. Quality, Func., Sched. & Bud. Predictability

- 1. changed yellow book reporting structure
- Quality reports indicate trend is right
   DECUS (IAS) went well. VMS went well even with pulling slides.

15. Focus on Quality

No comment.

16. Zero Installation Cost

Product defined Not sure what it takes for SWS to accept such a product.

17. Advanced Development Program

*funds allocation *proposals to RAD and s/w tools very good. This may help make it fun.

- 18. Application Product
  - 1. DECAID in approval stage.
  - 2. Ollie doing study for presentation in Q1.

#### THE GOALS AND OBJECTIVES PERFORMANCE EVALUATION SYSTEM

#### OVERVIEW

This simple system was invented to expedite the interaction between Software Engineering and Central Engineering with regard to Software Engineering's goals and objectives. It has some additional fall-out benefits to B.J. in his role as manager of Software Engineering. It provides one easily understood way in which the performance of the direct reports can be evaluated, as a part and parcel of the annual, personal performance reviews. By aggregating data on a fiscal year basis, a realistic notion can be pulled together to provide one arm of the Win Hindle Software Engineering Organization review. This should have the larger benefit of providing a "way" of talking about Software Engineering that stays straight forward on a yearby-year basis.

LP.

While all of the system is not operational for this quarter's review (due to its newness) the broad outlines of the system are there as well as the data flow. Please see Figure 1, immediately appended. Beginning with the next quarter's review of direct reports, the data will flow in and be aggregated on an organization wide level by goal. Please refer to the attached figure for details.

#### A NOTE OF CAUTION

The goodness of a system such as this as a management tool depends on the goodness of the measurement of the goal and the validity of this measurement in reflecting the spirit and true meaning of the goal. Ideally the measurement should also be: a) something directly under the manager's control and/or b) allow the manager in question to use these data/results to "explain" in a meaningful manner to the next level up in the management chain what is needed to improve the state of affairs. The point here is that very careful consideration should be given to the measurement of the goals.

#### ABOUT THE GOAL CATEGORIES

The broader goal categories (e.g. organization, process, people, product) will not change over time. These categories are not new ways of looking at an organization but are imbedded in years of experience of many people with organizations such as ours. What will change is the measurement or today's understanding of what that category means to us. Thus, the Hudson/ Spit Brook move will be mentioned and presumably will not be seen two years from now.

OVERALL RATING_____

EXPLANATION (IF NEEDED)

#### A QUICK WALK THROUGH THE SYSTEM

Herein is a very simple example to illustrate how the system works. We will take it by goal (using one goal) and then we will follow this piece of data through the three data sheets. Very few leaps of the imagination are needed to fill in the rest of the missing blanks.

Turn to the next page for the first data-step in the system: a typical data sheet by goal.

#### EXHIBIT A

#### TYPICAL DATA SHEET BY GOAL

NAME	Heffner	
DATE	4/30/80	

GOAL: Organization

Develop clear, viable charter for each Group.

.

Χ	MAJOR GOAL	Н	PRIORITY	(H/M/L)
	SUPPORT GOAL			
	NEITHER			
and a second sec				

RATING C

EXPLANATION (IF NEEDED)

Within Software Engineering we seem to do OK, but:

- 1. DECNET/VMS still unresolved.
- 2. Steil/Moffa (Micro products) still a mess.
- 3. Steil/Picott (Terminal Firmware) still needs work.

This, along with other similar data sheets, then gets put onto Exhibit B. Basically this is a data organization sheet by person and is entirely for B.J. in resolving issues that direct reports are having with the goals and objectives. It should also give B.J. some clues as to the strengths and weaknesses of a particular manager to see where special help is needed, etc.

So this piece of data on Exhibit A gets registered on Exhibit B. See next page.

This also gets registered on the GOAL SUMMARY SHEET, Exhibit C. With regard to the relationship between Central Engineering and Software Engineering, this is the important sheet. When this has been done for all the direct reports, B.J. then puts a group rating at the bottom left, taking into consideration how important the goals are overall, at the Software Engineering level, (Priority: high, medium or low being entered by B.J. into the space in the upper right corner of this aggregation sheet). He then uses the space at the bottom to express both his opinion and some sense of the individual opinions which appeared on the data sheet, Exhibit A. These sheets, of which this is an example, are what should form the basis of the quarterly evaluation of progress.

If B.J. chooses, for himself, he can carry this one step further and go back to Exhibit B and use it as an organizational data sheet, to see where his organization is doing well and where it may need some assistance.

Please look at Appendix A which was given to B.J. as an exercise of the system by Bill Heffner.

#### SOFTWARE ENGINEERING CHARTER

Software Engineering is responsible for the software product content of the Central Product Strategy. This responsibility ranges from the concept phase for new products through the support, and phase out stages Software Engineering proposes, develops and for existing products. supports those products and the architecture which span many Product Purchase (or leveraging) of externally developed software for Lines. DEC's product set is also a responsibility. The evolution of S/W technology through tools, processes and the methodology to improve productivity of S/W engineers, product quality and performance is a corporate responsibility. The development and evolution of programs to provide consistency and to improve the overall S/W discipline, visibility and career opportunities for Software Engineers is a corporate responsibility.

#### Key Aspects of Charter:

- Develop an organization and environment which promotes individual initiative, responsibility, and autonomy
- Develop and implement the software portion of DEC's product strategy
- Develop an architecture plan and install process.
- Develop and implement a software tools and software methodology program to aid productivity, quality and performance
- Provide leadership to leverage DEC sales through acquisition of externally developed software
- Develop and implement an Advanced Development plan and couple with Research

Software Engineering Charter

Page 2

- Leverage hardware system sales via development of a family of products and through migration aides and tools
- Communicate the strategy and plans within OOD, PL Engineering and S/W Services
- Review and provide feedback to PL Engineering and their plans for S/W products
- Develop a strong customer services organizational interface to drive maintenance and installation costs down
  - Work with Systems groups and Product Line groups to rationally understand migration, coexistence and compatibility goals
  - Develop a career planning system

BJ

10/8/79 Rev. 4

# INTEROFFICE MEMORANDUM

TO: Larry Portner Gordon Bell cc: O²D S/W Staff DATE: 12 November 1979 FROM: Bill Johnson DEPT: Software Engineering EXT: 3982 LOC/MAIL STOP: ML12-3/A62

SUBJ: GOALS & OBJECTIVES

These are the updates to goals and objectives for s/w engineering. These goals also represent the intergroup ( $O^2D$ ) requests I made at Squam Lake in October 1979.

Keep the faith BJ

/fs

JTO: S/W STAFF

cc: Larry Portner Gordon Bell

# INTEROFFICE MEMORANDUM

DATE: 9 November 1979 FROM: Bill Johnson DEPT: Software Engineering EXT: 3982 LOC/MAIL STOP: ML12-3/A62

SUBJ: GOALS AND OBJECTIVES

Attached are the goals and objectives for s/w staff members. Note that these are my goals with Larry and Gordon and match closely with yours.

In February Faith will set up a meeting with you and Jane to discuss performance against these goals. I would like you to put the goals/objectives in this format.

Goal ..... Objective 1 ..... Method ..... Measurement ..... Time ..... Objective 2 .....

Dick Snyder and Bob Freedman's goals are ok.

BJ

#### GOAL: ORGANIZATION

*Develop Clear, Viable Charters for each group.

### **OBJECTIVE:**

Develop clear charters for each site, for each organization reporting to B.J.. Make sure charters are viable in the long term. Establish clear charters (responsibilities) for staff members.

#### METHOD:

Develop various long term market/technology scenarios for Software Engineering; work to a conclusion organization alternatives; publish final recommendation.

#### **MEASUREMENT:**

Market/technology scenarios published, Org. alternatives detailed, final recommendation and charters.

#### TIME:

Q4, FY80.

#### GOAL: ORGANIZATION

Develop a stable "Less Hassle" environment.

#### **OBJECTIVE:**

*Understand what causes "Hassle" at each level.

#### METHOD

*Via sensing interviews at each level, document what is causing hassle and then set in place a program to fix it. If this is caused by another organization, develop joint objectives to solve this.

#### MEASUREMENT

*Lower turnover, greater productivity, and subjectively people will feel better.

#### WHEN

*First results in Q3, continuing thereafter

Cross O²D Goals

Grant, Bill, Dick, Ulf, Sam

Let's understand the boundaries, set clear expectation

John Meyer

Help me understand why people are leaving

### <u>Sí</u>

Drive for maturity in PIL. Eng. Interface - They own half that Interface

- 2 -

ORGANIZATION GOAL: Develop a Central S/W Product Management focus

#### OBJECTIVE & METHOD

- 1. Support the Corporate Product Marketing Manager (Si Lyle)
- Utilize the <u>Software Planning Team</u> to develop a comprehensive Central S/W Strategy and Budget that supports the S, M, L systems strategies and is responsive to the functionality needs of the corporation.
- Utilize the concept of the <u>Software Product Management</u> <u>Committee (SPMC)</u> to coordinate day-to-day PM activities for Software. (i.e. Promotion, Pricing, SPD's, DECUS, etc.).

4. Provide a 16 and 32-bit Central Planning Focus for Software.

5. Resolve how 36-bit will fold into the central plans.

#### MEASUREMENT

- 1. Ask Si Lyle if S/W Engineering is supporting his role.
- 2. Generate a strategy which holds together.
- 3. Hire a staff Product Manager to help focus these activities.
- 4. In place (Ham & Friedrich), keep it effective.
- 5. Resolution published via Per/Jack.

#### DATE

- 1. Immediate
- 2. Immediate
- 3. Immediate, hire person by 03
- 4. Immediate
- 5. End of Q2

#### OBJECTIVE

Work on an on-going basis with Jack Mileski, et al, on assuring that whatever changes are made, the job description of Product Management in the new context remains viable.

#### MEANS

Reference the Phase Review Process: to be sure that there is minimal disruption on the on-going process during the evolutionary stages.

To work with Bruce Stewart, as the Hardware piece comes into focus.

#### MEASUREMENT

The amount of disruption felt, expressed, etc.

The number of hassles that cause management intervention because of disruption in the process.

- 3 -

BJ

10/23/79

Develop a Central S/W Product Management focus

CROSS O²D GOALS

Si - Help make dual role for Jack Do-able

Ulf - Let's understand s/w org. role in 36-bit world (Q2)

Dick - Help us understand low-end comp./systems (Eng. & PL)
Needs and strategy?

Ulf/LP/GB - Help solve the product support issue for 36-bit.

PROCESS GOAL: Install (Enhance, Implement and/or Staff) an Architectural Process.

#### **OBJECTIVE:**

*Clarify Architectural charters relative to Corporate, Central Engineering and Software Development responsibilities.

How: Set Process for Software Development first, then explicit recommendation relative to scope.

When: FY80 - Q4

*Architectural area, Get right mix of technical and management force in place. (Both staff & line).

How: Identify responsibilities, attract right people.

When: FY80 - Q3

Define the role of Language Architect and then put one in place.

#### MEASURE:

Have a written job description and have a person to fill the job. COMPLETION:

There will be a written job description for such a person by mid Q3 FY80. The person will be hired no later than mid Q4 FY80.

BJ 10/23/79

PROCESS GOAL: Develop a method for S/W Services feedback on Installation and Support.

#### **OBJECTIVE:**

Understand for each new product what the goals are for installation and support;

Understand for each old product what actual installation and support hours are.

#### METHOD

Work through the Software Services/Software Engineering on-going interface committee to surface status information on the state of implementation of the CLAS system.

While SWS CLAS system is coming up world-wide, to define the frequency of reporting along with a commitment as to who receives why data.

Inform SWE of the same and what their data distribution responsibilities are.

#### MEASUREMENT

A smooth flow of data to responsible persons as the data becomes available.

#### DATE

Depends on when the SWS system is entirely up and running. The two should happen at approximately the same time or within the same quarter.

5

Will negotiate a date with S/W Services.

BJ 10/23/79 **PROCESS GOAL:** Install a process for measuring changes in the customers perception of product quality.

#### **OBJECTIVE:**

To have as much of the process of getting quality data into procedural form.

#### METHOD:

To continue to work with and train persons on all aspects of the Quality Questionnaire. This includes getting the coding procedure down par, getting the data into machine readable form, learning procedures for "scrubbing" the data base in preparation for preliminary analysis, doing the analysis, and finally developing a "how-to" set of instructions.

#### DATE:

Completed by Q4 80.

#### **OBJECTIVE:**

Development and publication of customer survey data.

#### METHOD:

Collect, analyze and distribute reports on customer perception of Quality with trend indicators.

C

#### DATE:

Q2 FY80 and on-going.

#### **OBJECTIVE:**

Improve focus on product quality

#### METHOD:

1. Insure Development intent

2. Strengthen Software Quality Management

3. Establish and use Quality Metrics

4. Install the right policies and make them work

5. Emphasize the System (as well as products)

#### **MEASUREMENT:**

Improved customer perception of Quality

PROCESS GOAL: Focus on Software Product Profitability in Business Planning.

**OBJECTIVES:** 

Continue to maintain and expand the quantitative data base tools and reports on key S/W products. Enhance the present Business Plan to reflect SWS costs and revenue.

#### METHOD:

Work with SWS on, how their costs are captured.

Modify the business plan accordingly.

#### DATE:

Q2-Q3 time frame. (In time for planning crunch.)

Utilize reports and forecasting information to keep Software Business Plans current.

#### METHOD:

Work with Bob Freedman on procedures to assure that there is comparability in the assumptions used in making the estimates.

#### DATE:

To be determined...before Q3.

#### OPEN ASPECTS

*Establish a focus to stimulate a shift in revenue to s/w - LP & GB request.

BJ 10/23/79

SOFTWARE GOALS (B.J.): Focus on Software Product Profitability.

#### FINANCE GOAL:

Organize and Develop a Strong, Influential and Effective Product Management Financial Support Team.

#### **RESULT:**

Develop consistency within the Software Organization and provide a strong business focal point for the integration of cross-engineering development planning.

#### HOW:

Initiate, develop and implement a series of standards, policies and metrics for Software Business Plans.

#### WHEN:

Financial Section	Project Spec Completed	M03-Q2FY80
Implementation Plan	Completed	M01-Q3FY80
First Draft	Completed	M03-Q3FY80
Final Draft	Completed	M02-Q4FY80

#### **RESULT:**

Contribute to a long-range plan for the financial evaluation of Software products. Emphasize total committed investment and Software Product Revenue (both direct and indirect) establishing a comparable base across Software's offerings and one that ultimately produces an accurate measure of product profitability.

#### HOW:

Design, develop and implement a Product History Data Project. Automate Software spending data streams.

Fipromast - Design and develop a model of costs and effort required to report effectively the internal corporate investment on products.

<u>WHEN</u> : Product History Data Project	Project Spec Completed	M03-Q1FY80
Implementation Plan	Completed	M01-Q2FY80
Project Completed (8 Major Products)	• •	M01-Q4FY80
Automate Software Spending Reports	Project Completed	M03-Q2FY80
Fipromast Study	Project Completed	M03-Q2FY80
Collection/ Integration	Project Completed	M01-Q3FY80
Long Range	First Draft Completed	M03-Q3FY80
Combined Plan	Final Draft Completed	M03-Q4FY80

#### **RESULT:**

Assist in the development and implementation of an effective and successfully managed process to acquire externally developed Software products.

HOW:

Provide the business attitude, appropriate analysis and clear thinking to insure good business decisions. Insure that management develops a dependency and a high level of trust in their financial support. Maintain a high visability in this area by openly supporting its concept and by continually probing, questioning and providing ad hoc suggestions, recommendations and assistance. Push hard for a trial case - provide the manpower, flexibility and a high desire to prove that effective financial support facilitates the process while reducing the probability of incorrect decisions.

#### WHEN:

Trial Case

Start (PASCAL) On-going M02-FY80

BJ

10/23/79

- 9 -

<u>PROCESS GOAL</u>: Aggressively Support Business Product Marketing Aggressively Support Systems Focus.

#### **OBJECTIVES:**

- 1. Have clear Software Strategy and Plans.
- 2. Participate on Systems SPU's.
- 3. Participate on PMC, OOD, and EBOD.
- Joint H/W S/W Planning. (where appropriate)

#### METHOD:

- Develop clear s/w strategies which are responsive to S, M, L System Planning Units requirements.
- 2. Work with SPU chairpersons to get best s/w person on unit.
- 3. Jack will be s/w member on PMC and EBOD (Si's positions), BJ at  $0^2$ D;
- 4. Detail a process for H/W S/W coordination.

**MEASUREMENT:** 

- Documents (Red and Beige Books) must be clear. Dick, Bill and Ulf will feel we are responsive and supportive.
- 2. Assign people from S/W Engineering agreed to by chairpersons.
- 3. How supportive and involved we are in the activities.
- 4. Less hassle between component builders/software, Need O²D help.

#### WHEN:

- 1, 2, 3. Immediate
- 4. Q2 start.

# CROSS O²D GOAL

Ulf, Bill, Dick, Grant

Detail a process for joint h/w - s/w coordination to include planning, commitment and change.

. 10 -

BJ 10/23/79

### FINANCE GOAL:

Impact O²D investment strategy by analyzing and emphasizing the shifts in investment between development, maintenance, quality and documentation. Research, evaluate and present historical and projected development investment strategies for FY76 through FY83 and the impact on our present and future business. Develop an encompassing competitive model, analyze implications and report on the level of synergism with industry standards.

### RESULT:

Improve the timeliness and quality of strategic investment decisions. Insure management understands the broad implications of their decisions in an objective, quantitative manner, reducing the complexity of product to product interdependence. Develop the capacity to measure investment decisions and associated trade-off internally as well as to external competition.

#### HOW:

Effectively participate in the New Budgeting System Task Force - Emphasize system budgeting and multi-year investment commitments. Actively support the development of an in-house, software based competitor library. Push hard and support the expansion of Software's Product Management Team. More specialized talent with broader exposure to DEC's major competitors.

#### WHEN:

New Budgeting Task Force	Project Completed	M02-Q2FY80
Competitor Library		<b>O</b> n-going
Product Management Team Expa	nsion	On-going

PEOPLE GOAL: Do Hudson and Spit Brook Road moves well.

# **OBJECTIVE:**

Have as many WC4 people move to Hudson and Spit Brook, if they are requested.

BJ

10/23/79

# METHOD:

See attached

#### **MEASUREMENT:**

85% of people will move,

95% of people will stay with DEC.

# WHEN:

At time of move.

SOFTWARE GOALS (B.J.): Do Hudson and Spit Brook well. Make this group a "Fun, In-Place" to work. Develop a Stable "Less Hassle" environment.

#### FINANCE GOAL:

Insure that the Spit Brook Road facility is designed, fit-up and operated consistent with Software's Productivity Philosophy.

#### **RESULT:**

Develop and implement an environment in which imagination, creativity and commitment to progressive thinking and decisive Facility Management creates and facilitates an atmosphere conducive to higher Quality Software productivity. Reduce bureaucracy and hassle in day-to-day operations. Provide an extremely high level of effective service. Make people want to go to Spit Brook.

#### HOW:

Assume the major role in interfacing with the Facility Planning and Engineering Organization, Engineering Planning, Building Architects, contractors and tenants - insure Software's objectives, needs and requirements are clearly articulated and successfully managed within the scope of practicality.

#### HOW:

Hire, train and develop a senior facility management team to insure a hasslefree environment in Spit Brook and one that meets our commitment to make Software a "fun, in-place" to work.

#### HOW:

Structure, organize and operate Spit Brook Computer Facilities to optimize our peoples' capabilities. Provide the right computer resources at the right time, right place and under the right conditions.

#### WHEN:

Build and Operate Spit Brook Successfully		On-going
Senior Facility Staffing	Completed	M02-Q3FY80
Design, Develop and Implement Spit Brook Computer Facility Plan	Completed	M03-Q3FY80

BJ 10/23/79

- 13 -

PEOPLE GOAL: Do Hudson and Spit Brook moves well

PERSONNEL OPERATING OBJECTIVES:

- *Invite and encourage employee participation on issues relating to these moves.
- *Formulate move policies consistent with employee needs and business requirements.
- *Provide continuity of quality personnel services during transition of employees to Spit Brook road and Hudson.

*Administer policy consistent with goal.

*Work special need cases of employees affected by group moves. e.g. Help find jobs in Digital for employees who may not be able to move.

**OBJECTIVE:** 

Move all Tewksbury Languages people and (if it is decided to do so) 75% of Marlboro Languages people to Spit Brook.

MEASURE:

No people from the Tewksbury languages organization are lost from the group to other DEC groups or to outside companies due to the move. Should it be decided to move the Marlboro languages people to Spit Brook, 75% of them move without being lost. The 25% that don't move should be placed in other jobs in Marlboro rather than being lost to DEC.

**COMPLETION:** 

Q1 FY81.

PEOPLE GOAL: Install an Aggressive College Hire Program.

#### **OBJECTIVE:**

Develop a plan for number of hires, and for on-site interviews. (This is not a growth year for s/w personnel).

#### **MEASUREMENT:**

Complete by November

BSSG will hire 25 new hires.

#### **OBJECTIVE:**

Produce a college hire plan for Marlboro with specific goals for number of hires to come from college. Review the past year's performance in the Merrimack and Tewksbury Language groups and lay out a conscious plan to either continue at the existing rate or alter it.

Identify technical people to do college recruiting who will also interview the same people they saw at the colleges when those people come to interview at DEC.

#### MEASURE:

There will be specific hiring goals for all three engineering sites in my organization. The people to visit colleges will be identified by name.

#### **COMPLETION:**

End of Q2 FY80 for Marlboro and end of Q3 FY80 for the rest of my organization.

# CROSS O²D GOALS

John Meyer - Make it a long term program, Be Innovative.

Reward

- I'll hire and hire and hire -----.

BJ 10/23/79 PEOPLE GOAL: Install an Aggressive Affirmative Action Program

# **OBJECTIVE:**

Meet the present goals.

#### **METHOD:**

Establish present level of people, number likely to transfer number likely to terminate final goal.

#### **MEASUREMENT:**

We meet it.

# DATE:

Q1 FY80.

# CROSS 0²D GOALS

- Develop bottom - up plans as well as top down

- Set specific interview/recruitment goals
PEOPLE GOAL: Make this a "fun-in place" to work.

**OBJECTIVE:** 

Produce an environment and organization which promotes individual initiative, responsibility and autonomy.

### METHOD:

Reduce hassle, give people clear decision authority or process for elevation, and reward initiative for quality-leadership products or tools.

### **MEASUREMENT:**

Our products, turnover of people.

<u>PEOPLE GOAL</u>: Develop a program which will result in longer tenure of people in management positions.

### **OBJECTIVE:**

*Implement manpower planning program to help understand future staffing and employee development needs.

- Forecasts tied to Red and Beige Books

- Supervisory Development and Training plans

### MEASUREMENT:

*Number of people who choose to go back to development because of management hassle will be reduced.

### DATE:

Q1 FY81.

# CROSS O²D GOAL

John Meyer - Need support for management development

- Training

BJ 10/23/79 PRODUCT GOAL: Improve Focus on Product Quality

### **OBJECTIVE:**

During Phase O and Phase 1 of each major product, use the data from the Quality Survey to develop plans to improve quality.

# MEASUREMENT:

After each release compare levels of customer perception to indicate benefit versus dollars expended.

DATE:

Implement starting in Q2.

Actual data in 6 months to 18 months.

### **OBJECTIVE:**

Fix the bugs.

# MEASUREMENT/DATE:

Do it. Now.

### **OBJECTIVE:**

Set quality goals of Retail Products Group Products <u>and</u> Medical, if proposal accepted.

19

### DATE:

Q2

<u>PRODUCT GOAL</u>: Meet Planned Quality, Functionality, Schedules and Budgets (no Surprises) Each group manager will

### **OBJECTIVE:**

Install an "inspection" process; at my level use Program Review process.

### METHOD:

Already installed.

**OBJECTIVE:** 

No product slips which exceed six months;

Each product release exceeds quality of last release.

DECUS groups will be happy.

**MEASUREMENT:** 

1. Yellow book,

2. Customer perception of Quality reports,

3. No bloodbaths.

# CROSS O²D GOALS

Bill Demmer - DECNET and Interconnect requirements use S/W Phase Review Program - s/w and h/w plans tie together.

Bruce Stewart - Help!!

PRODUCT GOAL: Delivery a zero installation cost product.

# **OBJECTIVE:**

C

SCS/RSTS, Retail Products Group products will be designed for customer installation.

# METHOD/MEASUREMENT:

I can install them.

## DATE:

Before Phase 2 meetings.

# CROSS O²D GOALS

Dick Clayton - Focus on SCS/RSTS or PDT.

BJ

10/23/79

PRODUCT GOAL: Define, Install and nurture an Advanced Development program.

**OBJECTIVE:** 

*Install a process to foster Advanced Development in all line groups and make it work effectively. Advanced Development funding is prior to ship commitment.

### METHOD & MEASUREMENT:

*Proposal in FY80-Q2 (Will include initiation/tracking/completion process
for all projects.)

When: Effective operation FY80 - Q4.

- *Establish advanced development funds within each group and centrally.
- Method: Set a recommended percentage of budget to be used for advanced development.

Date: Q2 FY80 set 70, FY81 implement.

*Establish a "fund" to be administered centrally to be used to spawn advanced development in targeted areas.

Method: set targets, set up process

Measurement: Q4, 80, Q3, 81

Effectiveness of program should be visible in FY82.

- 22 -

PRODUCT GOAL: Start the development of an Application Product.

### **OBJECTIVE:**

Develop a plan.

METHOD:

 George Thissell will aggressively pursue the outside acquisition program.

2. George will work with Ollie Stone to explore Retail Store applications.

DATE:

Plan by Q3.

Kur

NOTES COMMENTS FOR OPERATING OBJECTIVES KEVIEN W/ LP + 6 B 4/3/80 MITCH KUR

I. IMPROVE FINANCIAL PLINNING, BNAL, FESSE, MEAS

1. New Burker Process - EBS II busbeen designed and released; the task free was keaded by Ken Nisbet. It significants mixous EBSI by prover for cost center budgeting (headcount and expenses by account), describe project budgeting, four levels of budgeting (two of which are "off-lime" simulation type budget promas), five year thorizon, thistoric data, & lime myos (not pist finance people) con use it. Starting 4/8/80 for Fy SI - 85.

2. METRICS - Significant work has been done in gathing historic late; but lach of resources in the control Fin group kept his firm adold members and implement -- will proto slip from Q4 FySU to Q1 FySI.

REPORTS - Controllers report was designed and <u>ح</u> . inglamented as planned on schedule. Future effort needs to be directed at improving the report, making it more meaning ful, and more timing.

4. PROD MG7 JUPPONT a, Find Fin Reporting - Stated drassing with Prodimors / woodford to collect positions, idens, needs. Expect a clearer goal set

6. Even COST GATH/ MONITORING PROLEDURES - Patop arch. project Abore (#5). Part of the cabon reputy mobile.

II. Communicate/EDUCATE LINE MORS CONTROL + FIN. ROLE/REST.

1. DASIC FIN. MODEL - It's done, but in pieces, not really pulled togethis in one model. We've communicated via various invitations to staff mitys + 000 --- the 3/16 000 Direct Reanted Driver mity, Kon to Fuller staff 4/1, Ken to Haber's woods mity 3/28, etc. Kur v stop will pat together a conjudance strategy statement for the current beinge book process -- we'll use graphic models if they make Same.

2. ENG. FIN WORKSHOPS - Two were held in Spring of 1779 - - with signif. Personal Support. Wanted two more this year -- Out pers. Support & drive not there. Will putly offset with coffee serious for small groups within finance + continued presentations at other (00D's/line mgrs) staff mitgs.

III IMPROVE PROFET. STRENGTH OF ORG.

1. <u>HIRE COMPETENTS</u> - PONE/DUING -- VERTLITTLE UNPLANNED TURNOSOM IN ORG. LINE MORS DUN'T COMPLAIN -- ARE SUPPORTING --RELOGN. FIN IN THEIR ORGS. [FUT -- NEXT 6 MOT -- POTENTIAL FOR T/O AT STAFF LEVEL IS 14164]

2. PARTIC. IN C.E. HUMIKES. PEM - Both Chickey + Kur have been on Guy Fincke's Committees (different ones), + contributed.

PRESENZ + FUT. ISSUES 000 are - ANTIC D'S FIN. FOLLOWS COMPLEXITY WANT TO PLAN (i)(2) VLSI ORG - POTENTIAL PHOR MOFFA 7? MANAGER ? OD D New member HOW TO SUMMORT FIN. 3 TOPS / FACILITIES C# 20 M EXP. ENGINEERING FINANCE

GOALS/PLANS/PROJECTS FOR FY'80

### Priorities: (H) High

- A. <u>Content, Objectives, Responsibilities</u>
  - 1. Improve the professional strength of the Engineering Finance organization.
    - a. Plan and provide for financial career growth and promotional opportunities for high performers. Kur & Staff (H)
- A

A

- b. Hire highly competent people. Kur & Staff (H)
- c. Provide for and encourage participation in development programs, both inside and outside the company. Kur & Staff (H)
- 2. Improve financial planning, analysis, forecasting, and measurement capabilities.
- * a
- <u>New Budget Process</u> Design and implement a revised discrete project budgeting system which has at least a two-year focus and a specific approval process. (Started in FY'79). Resp.: Ken Nisbet, plus task force. (H)
- <u>Metrics</u> Develop metrics (including cc, project, manpower, space, capital, etc.) for both development groups and key service groups. Resp.: Jim Chiafery (Central), all F/M's (own areas). (H)
- c. <u>Control FY'80</u> The prime objective for FY'80 will be to insure that Central Engineering stays in control -- first, that it does not exceed its expense and capital budget, but with the caveat that potential problems of budget vs. schedule vs. project content are identified and exposed in advance by financial personnel, so that the appropriate <u>total</u> <u>business</u> tradeoffs may be made by line management at the "right" level in the corporation. Implicit is timely and accurate forecasting. Resp.: all. (H)
- └───>* d.
- (A-)
- Product Management Support A P/M support F/A is needed in Large Systems. This financial team will work with a Process/Systems Specialist to improve and/or redesign the Product Financial Statements, develop product investment metrics, along with an increasing role in investment analysis and development of corporate new product introduction financial evaluations. Resp.: Curt Rawley, F/M's, PMSF/A's. (H)

- Engineering Business Systems Architecture Replace e. Curt Rawley in order to continue this longer range business systems development activity; combine with Product Financial Statement Systems project. Resp.: M. Kur. (H)
- f.
- Engineering Finance Metrics Analyze collected data and organize into a cohesive formal package for ongoing measurement and review. Resp.: M. Kur, Jim Chiafery. (H)
  - Tool Development Provide investment analysis g. for tool development in EIS and Technology group. Resp.: Alan Silver and Mike Jean/Bruce Green.
  - Improve Reporting Tools for F/A's Engineering h. assume responsibility for labor processing and cost center reporting, improved budgeting and discrete project reporting. Resp.: Jim Chiafery.
  - Strategic Planning Improve/Strengthen the coupling i. between strategic planning and finance. Resp.: M. Kur, F/M's.

3. Do the "basics" better.

- "Simplification" Design and implementation of a. changes in accounting within the Simplification philosophy will be accomplished in FY'80 and FY'81. Included will be an analysis of current accounting/ AS ORICE D. be reporting by OOD member on both project financial practices in each OOD member's organization be reporting by OOD member on both project spending and "incurred" spending. An initial time-phased plan has been proposed. Resp.: Jim Chiafery, plus task force. (H)
- NON T w PROTOIED.
- Large Systems Development Fully integrate Large b. Systems (financially) into Central Engineering. Resp.: Dick Leslie. (H)
- Engineering Accounting/Finance Procedures Document C. these in a simple, easy-to-read, manual. Resp.: Jim Chiafery.
- Audit of "Basics" Provide for ongoing audit of d. travel expenses, employee receivables, overtime, first class air travel, and other "basic" financial areas requiring particular discipline within Central Engineering. Resp.: Jim Chiafery.
- M098 System Refine to minimize inter-plant recone. ciliations and provide accurate ECO history; resolve any loose audit issues. Resp.: Ken Hisbet.

Decentralized Engineering Accounting - An analysis (and justification, if justified) of the benefits of decentralization (Engineering ledger) - and/or of other alternatives -- is required before any major decisions and resourcesexpenditures (not budgeted in FY'80) are made toward an Engineering ledger. Continue implementing remote site accounting and reporting in Colorado, Phoenix, Marlboro, and Hudson. Resp.: Jim Chiafery.

000

Finance Budget - Accomplish FY'80 goals within a total cc322 budget increase of 15% over FY'79.

Educate line managers relative to their "control" responsibilities vs. the controller's role -- as described in the Corporate Controller's Staff Goals.

Directly participate on OOD. M. Kur (H)

- Ь. Continue Engineering Finance workshops (started in FY'79) for Engineering Line Managers, Supervisors, and other key people. Kur & Staff.
  - Communicate to all levels of management and keep them informed about Engineering Finance Charter and Engineering Finance organization structure. Kur & Staff.

Highest FY'80 priority goals, as established with Bill * Thompson and Larry Portner.

M.C. Kur 2/16/79

### CENTRAL ENGINEERING FINANCE CHARTER

- BASIC CHARTER STATEMENT: The Central Engineering Finance function is the financial business partner of Engineering Operating Managers and Product Managers, and is responsible
  - to provide financial planning, analysis, audit, and control for Engineering operating units, for Engineering programs/projects, and for the support of product business plans and new product justification;
  - to assist engineering Management in the financial evaluation of alternatives;
  - to provide tools and analysis for assessing tradeoffs between budget, schedule, and functionality of development projects;
  - to develop, support, and/or manage related administrative and financial business sytems and functions;
  - to insure integration and coupling between Central Engineering and corporate financial objectives and plans; and
  - to develop the financial team to support Engineering operating units.

### MAJOR RESPONSIBILITIES:

- A. FINANCIAL SUPPORT, PLANNING, AND CONTROL ENGINEERING OPERATING UNITS
  - Develop Central Engineering Operating budgets and capital budgets, including appropriate control reports.
  - Insure integration between corporate budgets and Central Engineering budgets.
  - 3. Coordinate with Central Engineering's strategic planning group in the quantitative evaluation of alternative strategies and in the structured presentation of quantitative data as part of the strategic plan.
  - 4. Install and maintain systems to control actual expenses to plan, at project level, at cost center level, and at higher roll-up levels for both.

- 5. Identify problems in advance, and force resolution wherever necessary (at OOD and within corporation).
- 6. Be a part of the management team at each level, and be judged on the execution of the team's plan.
- 7. Provide financial training for non-financial Engineering personnel.
- 8. Develop measurements and metrics for evaluating Engineering operations.
- 9. Develop an improved budget system, to cover a minimum of two full fiscal years.
- B. FINANCIAL SUPPORT, PLANNING, AND CONTROL PRODUCT MANAGEMENT
  - Document the financial section of business plans, in conjunction with and approval of product manager(s).
  - Develop tools and provide resources to financially evaluate product and business plan alternatives, and to justify specific proposed new products.
  - 3. Assist Product Manager in providing new product introduction cost evaluations for the corporation.
  - 4. Develop and provide meaningful reports for measuring financial performance by product.

### C. ADMINISTRATIVE SYSTEMS

- 1. Assist, as required, in space planning activities.
- Support Engineering operating management and Personnel Department in manpower planning and forecasting, and develop controls for assuring accomplishment of plan and its integration with budgets.
- 3. Obtain (from other corporate sources) or provide selective analysis of competition (as agreed upon with Engineering Operating Managers and/or product managers).

### D. RESPONSIBILITIES RELATIVE TO TOTAL CORPORATION

- 1. Insure Central Engineering financial plans are integrated with corporate financial plans.
- 2. Provide a system for allocating Engineering expenses to the Product Lines.

- 3. Provide input, support, and active participation in the development of corporate planning and financial processes (e.g. Simplification, new financial Redbook, overall budget process, accounting change task force, financial training courses, etc.).
- 4. Develop and implement a decentralization program for Central Engineering, in conjunction with corporate decentralization activity.
- 5. Protect those corporate assets under the responsibility of Central Engineering.

### E. DEVELOPMENT OF THE FINANCE TEAM

\$

Ċ,

- 1. Provide for training and continued educational development of financial personnel.
- 2. Insure high financial and interpersonal competence of new personnel.
- 3. Provide for continuous feedback to personnel of performance and development needs.
- 4. Institute a career development program providing for growth both within Engineering Finance and with other finance organizations within DEC.

TO: GORDON BELL* LARRY PORTNER DATE: FRI 11 APR 1980 9:31 AM EST FROM: SI LYLE DEPT: CORP FROD MNTG EXT: 223-7311 LOC/MAIL STOP: ML12-1 T39

SUBJECT: OBJECTIVES & GOALS FOR 4/16 MEETING >3

SL1/S2/2

### OBJECTIVES/STATUS FROM 10/25/79

#### OBJECTIVES.

- 1. Define and implement EBOD process
  - Befinition of the entire process is still not done.
  - Some time and thoughts were lost in Andy to Bill transition.
  - Have tentative bug-in from Bill on SPU, strategy planning, EBOD calendar
  - SPU's up and running, but need calendar and more definitive statement of role from Bill, Larry and self.
- 2. Establish appropriate Product Management job descriptions and levels.
  - Job descriptions and levels complete
  - Used in February/March salary planning
  - Awaiting Corporate approval
- 3. Establish working relationship with marketing and other functions.
  - Monthly systems meetings running since November 1
  - Product Management supporting PPC short term requests
  - Formal communication links need to be established
- Establish an integrated long range planning cycle that couples systems/product markets and budget.
  - Starting point, integrated strategy and base plan content finished by April 10, Formatting, presentation and OOD review underway
  - Link between SPU's, EBOD, Product Line long range plans still has to be defined

- ECO process has yet to be established
- 5. Develor systems business plans
  - Starting point, experiment with linking product line demand forecasts with long range product plans -Orange book 3/80
  - Systems still needs OOD definition
- 6. Help specify MIS needs.
  - 2 field trips
  - Specifications need to be senerated
  - Participated in design of color books and processes

In addition to working the issues associated with the above objectives, the following items have, or are being, completed.

- Non disclosure package for systems and products for the Product Lines as requested by the Marketing Committee.
- 2. Start of Phase In/Phase Out Product Task Force as requested by Win.
- 3. Completion of Cost of Ownership Task Force as requested by Operations Committee,
- 4. Word Processing transition issues.
  - Preliminary work associated with budgeting products and staff with Stan
  - Jack Gilmore transition into Central Ensineering
  - Start of OFIS product plan
  - Fire fight field issues
- 5. Provide moral support and direction through one on ones with Bob Dockser and Jim Barbour.
- 6. Involved with the sell of Systems Management within OOD including starting systems management task force.
- 7. Participate in sales situations with Raytheon, Boeins: Aires Ltd. and MacDonald Douglas.
- 8. Participated in U.S. resional and district managers cales meetings.
- 9. Worked funding issues for a number of items including special issues of sales update, IAS, handbooks, DEC 10/20 promotion.

Current Objectives

Strategic Planning

- Get present document through product line and EBOD approval cycle - June 3, 1980
- Use present stratesic plans document as base and define process using SPU's and product line long range plans to synchronize market and product strategic plans June 3, 1980.
- Define content and format for Redbook July

Product Planning

- Get present base plan through product line and EBCD approval cacle - June 3, 1980.
- Put control process in place to keep base plan up to date and trisser project/product/program reviews - June 3x 1980
- Define Phase O offical review process similar to FPC -July 1980
- Define business plan format associated with type of product and phase - July 1980
- Provide product planning guide to long range planning process - August 1980
- Review each major product/program at PMC on a 5 year basis for implementation of strategy, customer needs, and competitiveness

Marketins

- Improve ensineering/product management/PPC interaction
- Define time-table and methods of implementing PPC announcement criteria - August 1980
- Participate in product group managers meeting on a regular basis

Systems Management

- Work definitive issues across OOD
- Run Systems Management Task Force
- Implement PPC systems pricing announcement criteria
- Continue Oranse book
- Work Phase In/Phase Out product issues as chairman of

#### CHARTER

The role of the Systems Manager in the Product Marketing organization is to develop system plans and to see that they are implemented by all functional organizations. The planning shall include inputs from the marketing groups, corporate marketing, and engineering and will be focused on the saleability, cost of ownership, and gross profit of the system.

The role of the Product Manager in the Product Marketing organization is to develop product plans which meet the requirements of the system plans and market plans, if the product is to be sold as a stand-alone product. The product plans will meet the same criteria as the system plans.

The Systems and Product Managers will be part of a line product marketing organization and shall also report to the appropriate engineering manager to assure technology coupling and managing the engineering interface with the other functional departments.

#### THE JOB

The jobs within product management are undergoing a transition to become much more marketing oriented with an emphasis on external factors such as competition, market opportunities, and customer cost of ownership. The jobs will also take on an increased responsibility for measuring and taking steps for improving the profit of each product (system).

Jobs within product marketing will be developed to lead to promotion within product marketing as well as promotion to senior jobs in other functions, particularly marketing groups.

#### FUNCTIONS

#### Planning

Product marketing is responsible to maintain a formal four step planning process for all systems and products.

.

The four steps are:

- a) <u>Market opportunities</u> reviewed by Product Marketing Committee (PMC) and the marketing groups (M/G).
- b) <u>Strategic market plan</u> reviewed by PMC and the engineering board of directors (EDOD).
- c) <u>System/product business plan</u> reviewed by PMC, Office of Development (OOD), M/G and EBOD.
- d) Implementation plan reviewed by PMC and OOD,

#### Processes

Product marketing is responsible for the processes needed to handle a product (system) from the business planning stage through to announcement. This includes the interfacing between all functional groups.

The EBOD process is used to review strategic direction and set major budget goals.

The Program Review process is used to coordinate the business plans of the groups with the status of the program.

#### Marketing

Product marketing is responsible for the development of the following items to simplify the selling of all products.

- a) Simplified data sheet and price lists
- b) Product positioning statement
- c) Market focus (by market and/or strategic market groups)
- d) Competitive analysis
- e) Pricing proposal
- f) Announcement plan

Financial

Product marketing is responsible for the review of all systems and products to determine financial impact and cost of ownership with particular emphasis on gross margin, start-up expenses, profit and yields. Investment decisions are to be based on financial models which include profit and cash flow analysis.

#### GOALS

- 1. Develop a product/system marketing team that is focused on the specification of needs, and all facets that affect the profitability of the product/system during its total life.
- 2. Develop where necessary and continue to improve existing processes for .
  - a) "contracts" and forecasting with marketing groups,
  - b) co-ordination of central engineering strategy, and
  - c) management of engineering role in EBOD.

- 3. Develop where necessary and continue to improve existing process for system strategies and plans that
  - a) account for the sales/marketing environment and expected changes within that space during the life of the system,
  - b) position each system within DEC's total offering, and
  - c) include field service and manufacturing input at the start of each project, within context of systems family.
- 4. Develop a set of product strategies
  - a) products will be categorized an sold as stand-alone or sold as part of system and/or stand-alone,
  - b) the product strategies for stand-alone products will be the same as 3a to 3c, and
  - c) products sold as only part of system will be governed by system strategy.
- 5. Make systems and products easier to sell by developing
  - a) easy to use systems price lists,
  - b) Data Sheet Product Notebook, and
  - c) a co-ordinated literature plan.
- 6. Reduce the cost of ownership by
  - a) reducing the number of different components in products,
  - b) designing field service and manufacturing needs into the product,
  - c) developing a total plan for the entire life of a product/system and
  - d) planning mid-life kickers at the outset of a project.
- 7. Increase gross margin by
  - a) developing pricing plans for the life of product,
  - b) reducing start-up and on-going support costs, and
  - c) making necessary financial trade offs across all factors affecting the cost of goods sold.
- 8. Measure the P & L and cash flows of all systems and stand-alone products over th entire life of the product system.

SML-10/2/79 /mlum

- 1. Define and implement EBOD process.
  - a) Definition
    - conceptual scheme approval October 29
    - flow chart process November 8
    - review process OOD November 15
  - b) Implementation
    - select procedure (Harvard 10 Step) November 16
    - start to establish SPU's PMC November 22

2. Establish appropriate Product Management Job Descriptions and levels.

- a) Determine number of levels October 11
- b) Prepare Job Descriptions October 31
- c) Personnel review (Don Ames) November 15
- d) Review at OOD (John Meyer) November 30
- e) Corporate approval December 30
- f) Adjust Managers classification January 15
- g) General Announcement January 30
- h) Define role of systems/product managers November 30
- i) Integrate systems/product managers role with systems/program managers December 31.
- 3. Establish working relationship with marketing and other functions.
  - a) Define a working forum October 20
  - b) Set-up and run monthly corporate meeting first one November 1

SML:10/24-2

 c) Deal with short term issues raised by PPC review process needs October 29 design process implementation process December 31

- Establish an integrated long range planning cycle that couples systems/ product markets and budgets.
  - a) Review present planning commitments October 18
  - b) Review staffing impact October 25
  - c) Establish SPU's start November 22
  - d) Determine 5 year revenues by
    - service/equipment
    - architecture 5 types
    - functionality December 4
  - e) Determine method of reviewing revenue impacts coupled to P/L forecasts. November 30.
- 5. Develop systems business plans.
  - a) Select a product to be used to establish a complete system business plan November 30
  - b) Develop cursory system plan December 30
  - c) Test systems contract with P/L's January 30
  - d) Develop full system plan. March 1
  - e) Enter into contracts with all functions. May
  - f) Expand to other systems.
  - g) Select 1 product to test impact model. December 31
  - h) Establish planning goals and staff. December 31
  - i) Target total integrated plans. June 30
  - J. Prepare redbook to present forecast. February 1.

6. Help specify MIS needs.

- a) Review external approaches. Bruce, Mitch November 30
- b) Produce statement of needs December 15

NOV 26 1179 SML:10/24-25/79

#### CENTRAL ENGINEERING PERSONNEL CHARTER

<u>MISSION STATEMENT</u> - To participate with management and employees, both as a direct contributor and as a consulting resource, in creating an environment which promotes innovation, Affirmative Action and assures effective utilization of individual and organizational resources in conjunction with Corporate philosophy, goals, and objectives.

Personnel will provide capabilities which enable Central Engineering to:

- Provide strategies and plans for attracting, retaining and developing a competent workforce.
- Establish a linkage between organization requirements and individual needs.
- o Monitor the impact of decisions and conditions on organizational effectiveness and employee morale.
- Develop programs and processes which provide for effective communication among employees.
- o Treat employees fairly and in a manner consistent with Company policies.
- o Conform with legal requirements.
- Develop, support and manage related administrative and personnel programs, systems and tools
- Influence, participate with, and insure integration of Central Engineering and Corporate Personnel objectives and plans.

J. Meyer June/79 MS 22

#### PERSONNEL GOALS

1. Provide day to day Personnel Services to employees.

- a Employee Relations/Communications
- b Salary/Benefits Administration
- c Training and Development Support
- d Administration/Monitoring of EEO/AAP
- e Employee Activities
- f Community Relations

g Policy interpretation and administration

- h Health Services
- j Special projects needed by individual organizations
- 2. Provide program management in Human Resource Planning and Development to enable Central Engineering to understand and meet its technical and managerial staffing needs 3-5 years out. In so doing, help the organization accomplish the Product Strategy and help individual employees satisfy their career needs.
- 3. Provide organization development to line managers, technical contributors, and personnel staff as they work to achieve business and "people" goals. Provide a strategic focus on key areas such as organization climate, group interfaces, management systems and engineering processes.
- 4. Provide the proper supply of qualified candidates to meet the staffing requirements of Central Engineering.
- 5. Create and maintain management awareness of Compensation/Benefits programs; how they are developed; how they are utilized within their respective organization; how effective they are and how to bring about program changes.
- 6. Develop and maintain an effective Employee Information System.
- 7. Collaborate with and support Corporate Personnel and other DEC Personnel Departments.
- 8. Provide a competent Personnel Department that is capable of supporting the Engineering group.

MS043

#### PERSONNEL GOALS and FY'80 OPERATING OBJECTIVE SUMMARY

(Detail on individual department plans)

#### 1. Provide day-to-day Personnel Services to employees.

#### A Employee Relations/Communications

Provide an environment whereby line managers and supervisors develop an increasing ownership for employee relations.

Insure that administrative systems and procedures are designed in such a way that local supervisory responsibility and control is fostered.

Begin to initiate a change in Personnel's role from problem solving to consulting: Analyze and review:

1) those functions which are performed by supervisors and managers

2) those functions performed by Reps which should be performed by supervisors and managers

3) those functions which should be performed by Reps.

Insure formal and informal sensing techniques are in place within the groups. Continue installation of group meetings where management and subordinates come together to talk.

Update the Tewksbury Employee Handbook. Modify and enhance orientation program.

Assist internal movement of employees within Central Engineering and DEC.

Consultant/Senior Consultant job descriptions, qualifications and Review Process.

Begin development of an assimilation program for new employees: Develop task force; Design Program; Implement Phase I and Evaluate.

Tewksbury Sensing Process: Design; Initial implementation; Modify design and Second implementation.

Continue meetings of new hires and group managers.

Invite and coordinate participation of employees on issues relating to SER and Hudson moves.

#### Salary/Penefits Administration

Conduct and/or have conducted at least one supervisory training session on Compensation at each Engineering location.

Revise current equal pay audit procedure; continue audits under revised procedure.

Design communications network among supervisors, employees and personnel group to aid in program development and implementation.

Continuation of Phase II of management job slotting project.

Review and/or write job descriptions within Engineering job families.

Special study of product/program management job family.

Exception spending, planning, implementation, program monitoring.

Exempt pay program administration: program monitoring, assessment of effectiveness, propose modification, implementation of next years program.

Non-exempt pay program analysis: Program monitoring, assessment of effectiveness, propose modifications, implementation of next years program.

Technician study: job descriptions/evaluation/structure analysis and revision as needed.

2 Training and Development Support

• Provide supervisory training modules on: Compensation, EEO/AA, Interviewing skills, Continue Discipline Documentation, and Finance Training programs. Evaluate M.T.O.

Communicate Technical courses/catalogs on-site.

Develop and implement programs to educate all users to their role in the S & P process which will gain more effectiveness and efficiency. Some examples of these programs are: Interviewing skills workshops; "State of the Marketplace" communications; and "How the administrative system works."

Definition of H.R.P. & D. Dept. training responsibilities.

#### D Administration/Monitoring of EEO/AAP

Review organization EEO/AA goals with OOD Staffs.

Develop and implement proactive Affirmative Action sourcing programs to help increase our representation of minorities and women in the C.E. organization.

Continue Male/Female Workshops where applicable.

#### E Employee Activities

Maintain present programs.

F Community Relations

Continue developing and understanding our responsibilities for this activity - primarily at Tewksbury and Spitbrook.

G Policy interpretation and administration

Participate in formulating policies across Engineering and DEC.

H Health Services

Investigate and propose an Employee Assistance program at Tewksbury. Monitor installation of Health Services Unit at Spitbrook Rd.; hire nurse to operate.

Continue involvement with Mill Health Services Unit.

J Special projects needed by individual organizations

Participate in Hudson and Spitbrook Road facility development and moves.

Participate in the redesign of the Engineering Roview Board and ensure consistency across DEC and Engineering.

2. Provide program management in Human Resource Planning and Development to enable Central Engineering to understand and meet its technical and managerial staffing needs 3-5 years out. In so doing, help the organization accomplish the Product Strategy and help individual employees satisfy their career needs.

Define and begin installation of a Human Resource Planning and Development Program across Central Engineering.

Develop an HRP&D Program Plan (3-5 years)

Develop and initiate a process to understand and review C.E. technical and management needs 3-5 years out.

Propose an FY'81 plan and budget for H.R.P.

Develop and install a process for development planning and review for OOD members and their direct reports.

Continue the improvement of the Human Resource Process within CSD.

Improve content and purpose of the Human Resource Spring Woods

Improve quality content of salary reviews.

Begin Performance review program in SSD.

Establish quarterly review process for staff's direct reports and their direct reports.

Begin (1) level down development review for: Software, Tech. Director, Group level Software.

Definition of H.R.P.&D Dept. training responsibilities.

3. Provide organization development line managers, technical contributors, and personnel staff as they work to achieve business and "people" goals. Provide a strategic focus on key areas such as organization climate, group interfaces, management systems and engineering processes.

Continue the integration of key groups into/with other organizations ie:

Formally identify Steils' and Glorioso's staff with respective Engineering Development groups.

Support project manpower flow between MSD groups (Adv. Dev., Prod. Dev., S.W. and Hydra)

Develop Terminals organization plan and communicate integration of Printer and Video.

Assist in defining charters and relationships between SSD and LSI group.

Establish an on-going sensing program to test the environment and to give data to management. Tewksbury is being used as test site.

4. Provide the proper supply of qualified candidates to meet the staffing requirements of Central Engineering.

Establish an effective Internal Transfer process. .

Develop, implement and monitor consistent administrative systems and metrics for the C.E. Staffing and Placement Organization.

 Develop and administer the College Relations and College Recruiting Programs.

Develop and implement programs to educate all users to their role in the S&P process which will gain more effectiveness and efficiency. Some examples of these programs are: Interviewing skills workshops; "State of the Marketplace: communications; and "How the administrative system works." H.R. planning process to understand C.E. technical and managerial needs 3-5 years out: Design, Implement, Review results.

5. Create and maintain management awareness of Compensation/Benefits programs:

How they are developed

How they are utilized within their respective organization

How effective they are

How to bring about program changes

Conduct and/or have conducted training in Comp/Ben at various locations.

Design communications network to aid in development and implementation of Comp/Ben programs.

Establish a company visit program with 12-14 companies to talk about engineering and engineering related jobs. Visit 2-3 companies per quarter.

6. Develop and maintain an effective Employee Information System.

Personnel Information System:

Conduct C.E. needs analysis Scope out system specifications Develop maximum utilization of System 1022 Augment Corporate programs with compatible Engineering programs. Continue and expand use of Personnel Activity Reports.

7. Collaborate with and support Corporate Personnel and other DEC Personnel Departments.

Manage the Staffing and Placement Function across Central Engieering while integrating into Corporate Programs and Goals.

Scope managment positions: Continuation of managemenet slotting project.

Personnel Training program for DEC personnel department.

Individual development plans for OOD members.

Corporate O.D. Thrust: Consulting group; Functional O.D. Mgrs.; Al Fitz.

. Provide a competent Personnel Department that is capable of supporting the Engineering group.

Be fully staffed.

Develop and review with management site department plans for Hudson and Spitbrook Rd.

Department management:

What are we going to do for ourselves?

How are we going to review goals and objectives?

What is our management process?

Consulting skills training to C.E. professional Personnel staff.

MS045

#### CENTRAL ENGINEERING PERSONNEL DEPARTMENT OPERATING OBJECTIVES - FY'80

### 1. Human Resource Planning

Objective	Completion Date
HRP&D Program Plan	•
Model/philosophy statement Overall goals (3-5 yrs. out) Annual objectives for each year Activities for each year Staffing/organization plan for	10/31/79 10/31/79 10/31/79 10/31/79
Individual development plans for OOD members and their direct reports	6/30/80
HRP process to understand C.E. Technical and managerial needs 3-5 years out:	L
Product strategy and supporting technology plans FY81 planning/budgeting process	1/31/80 6/30/80
2. College Recruiting and Relations	
Continue the development of the College Recruiting and College Relations Program that support present and future staffing requirements.	ns 3
Develop, implement and monitor systems and processees to provide C.E. the opportunity to hire 200 new grads in FY80	6/30/80
Develop plar focusing initially on 9 colleges	4/30/80
Implement plan	6/30/80
3. Spitbrook Road and Hudson facility plans and	moves
<b>Provide</b> leadership and plans for the gro that will minimize disruption to work an	oup moves nd family

that will minimize disruption to work and family life for affected employees resulting in a high degree of employee satisfaction and a termination rate not higher than organization average. 3. Spitbrook Road and Hudson facility plans and moves - continued

Objective	Completion date
Invite participation of employees on issues relating to SBR move	<b>Q1</b> 80
Formulate move policies consistent with employee needs and business objectives	Q1_80
Administer policy consistent with goal	On-going
Provide a continuity of quality personnel service during transition of employees	01 02 80

### 4. Assimilation Program for new Engineering employees

Assemble task group			12/31/79
Design initial program		:	3/1/80
Implement first part			4/30/80
Evaluate			6/30/80

Engineering Personnel Administration

-

# OPERATING OBJECTIVES WHICH ARE COMMON ACROSS THE CENTRAL ENGINEERING ORGANIZATION

- 1. Human Resource Planning
- 2. College Recruiting and Relations
- 3. Spitbrook Road and Hudson facility plans
- 4. Spitbrook Road and Hudson employee moves
- 5. Assimilation Program for new Engineering employees
- 6. Help managers understand and execute personnel responsiblities

#### PERSONNEL GOALS and EY'30 OPERATING OBJECTIVE SUMMARY

#### (Detail on individual department plans)

#### . Provide dev-to-day Personnel Services to employees.

#### A Employee Relations/Communications

Provide an environment whereby line managers and supervisors develop an increasing ownership for employee relations.

Insure that administrative systems and procedures are designed in such a way that local supervisory responsibility and control is fostered.

Begin to initiate a change in Personnel's role from problem solving to consulting: Analyze and review:

1) those functions which are performed by supervisors and managers

2) those functions performed by Reps which should be performed by supervisors and managers

3) those functions which should be performed by Reps.

Insure formal and informal sensing techniques are in place within the groups. Continue installation of group meetings where management and subordinates come together to talk.

Update the Tewksbury Employee Handbook. Hodify and enhance orientation program.

Assist internal movement of employees within Central Engineering and DEC.

Consultant/Senior Consultant job descriptions, qualifications and Review Process.

Begin development of an assimilation program for new employees: Develop task force; Design Program; Implement Phase I and Evaluate.

Tewksbury Sensing Process: Design; Initial implementation; Modify design and Second implementation.

Continue meetings of new hires and group managers.

Invite and coordinate participation of employees on issues relating to SER and Hudson moves.

#### P Salary/Benefits Administration

Conduct and/or have conducted at least one supervisory training session on Compensation at each Engineering location.

Revise current equal pay audit procedure; continue audits under revised procedure.

Design communications network among supervisors, employees and personnel group to aid in program development and implementation.

Continuation of Phase II of management job slotting project.

Review and/or write job descriptions within Engineering job families.

Special study of product/program management job family.

Exception spending, planning, implementation, program monitoring.

Exempt pay program administration: program monitoring, assessment of effectiveness, propose modification, implementation of next years program.

Non-exempt pay program analysis: Program monitoring, assessment of effectiveness, propose modifications, implementation of next years program.

Technician study: job descriptions/evaluation/structure analysis and revision as needed.

C Training and Development Support

Provide supervisory training modules on: Compensation, EEO/AA, Interviewing skills, Continue Discipline Documentation, and Finance Training programs. Evaluate M.T.C.

Communicate Technical courses/catalogs on-site.

Develop and implement programs to educate all users to their role in the S & P process which will gain more effectiveness and efficiency. Some examples of these programs are: Interviewing skills workshops; "State of the Marketplace" communications; and "How the administrative system works."

Definition of H.R.P. & D. Dept. training responsibilities.

#### D Administration/Monitoring of EEO/MAP

Review organization EEO/AA goals with OOD Staffs.

Develop and implement proactive Affirmative Action sourcing programs to help increase our representation of minorities and women in the C.E. organization.

Continue Malc/Female Workshops where applicable.

#### E Employee Activities

Maintain present programs.

F Community Relations

Continue developing and understanding our responsibilities for this activity - primarily at Tewksbury and Spitbrook.

#### G Policy interpretation and administration

Participate in formulating policies across Engineering and DEC.

#### R Health Services

Investigate and propose an Employee Assistance program at Tewksbury. Monitor installation of Health Services Unit at Spitbrook Rd.; hire nurse to operate.

Continue involvement with Mill Health Services Unit.

J Special projects needed by individual organizations

Participate in Hudson and Spitbrook Road facility development and moves.

Participate in the redesign of the Engineering Review Board and ensure consistency across DEC and Engineering.

2. Provide program management in Human Resource Planning and Development to enable Central Engineering to understand and meet its technical and managerial staffing needs 3-5 years out. In so doing, help the organization accomplish the Product Strategy and help individual employees satisfy their career needs.

Define and begin installation of a Human Resource Planning and Development Program across Central Engineering.

Develop an HRP&D Program Plan (3-5 years)

Develop and initiate a process to understand and review C.E. technical and management needs 3-5 years out.

Propose an FY'81 plan and budget for H.R.P.

Develop and install a process for development planning and review for OOD members and their direct reports. Continue the improvement of the Human Resource Process within CSD.

Improve content and purpose of the Human Resource Spring Woods

Improve quality content of salary reviews.

Bogin Performance review program in SSD.

Establish quarterly review process for staff's direct reports and their direct reports.

Regin (1) level down development review for: Software, Tech. Director, Group level Software.

Definition of H.R.P.&D Dept. training responsibilities.

3. Provide organization development line managers, technical contributors, and personnel staff as they work to achieve business and "people" goals. Provide a strategic focus on key areas such as organization climate, group interfaces, management systems and engineering processes:

Continue the integration of key groups into/with other organizations ie:

Formally identify Steils' and Glorioso's staff with respective Engineering Development groups.

Support project manpower flow between MSD groups (Adv. Dev., Prod. Dev., S.W. and Hydra)

Develop Terminals organization plan and communicate integration of Printer and Video.

Assist in defining charters and relationships between SSD and LSI group.

Establish an on-going sensing program to test the environment and to give data to management. Tewksbury is being used as test site.

I. Provide the proper supply of qualified candidates to meet the staffing requirements of Central Engineering.

Establish an effective Internal Transfer process. Means?

Develop, implement and monitor consistent administrative systems and metrics for the C.E. Staffing and Placement Organization.

Develop and administer the College Relations and College Recruiting Programs.

Develop and implement programs to educate all users to their role in the S&P process which will gain more effectiveness and efficiency. Some examples of these programs are: Interviewing skills workshops; "State of the Marketplace: communications; and "How the administrative system works." Develop and implement proactive Affirmative Action sourcing programs to help increase our representation of minorities and women in C.E. organization.

H.R. planning process to understand C.E. technical and managerial needs 3-5 years out: Design, Implement, Review results.

5. Create and maintain management awareness of Compensation/Renefits programs:

How they are developed

How they are utilized within their respective organization

How effective they are

How to bring about program changes

Conduct and/or have conducted training in Comp/Ben at various locations.

Design communications network to aid in development and implementation of Comp/Ben programs.

Establish a company visit program with 12-14 companies to talk about engineering and engineering related jobs. Visit 2-3 companies per quarter.

Develop and maintain an effective Employee Information System.

Personnel Information System:

Too mul

Conduct C.E. needs analysis Scope out system specifications Develop maximum utilization of System 1022 Augment Corporate programs with compatible Engineering programs. Continue and expand use of Personnel Activity Reports.

7. Collaborate with and support Corporate Personnel and other DEC Personnel Departments.

Manage the Staffing and Placement Function across Central Engieering while integrating into Corporate Programs and Goals.

Scope managment positions: Continuation of management slotting project.

Personnel Training program for DEC personnel department.

Individual development plans for OOD members.

Corporate O.D. Thrust: Consulting group; Functional O.D. Mgrs.; Al Fitz. Provide a competent Personnel Department that is capable of supporting the Engineering group.

Be fully staffed.

Develop and review with management site department plans for Hudson and Spitbrook Rd.

Department management:

What are we going to do for ourselves?

How are we going to review goals and objectives?

What is our management process?

Consulting skills training to C.E. professional Personnel staff.

#### COMPENSATION/BENEFITS/ADMINISTRATION GOALS

- I. Create and maintain a management awareness of Compensation/Benefits programs:
  - How they are developed.
  - How they are utilized within their respective organization.

- How effective they are.
- How to bring about program changes.
- II. Develop and maintain an effective management information system encompassing Compensation/Benefits and general Personnel information.
- III. Create and maintain an effective benefit communication network designed to aid in program development and program implementation.
  - IV. Develop and maintain a system for bringing about the proper balance between external market salaries and internal job relationships.
    - V. Provide a smooth working administrative organization for carrying out various Compensation/Benefits programs and provide the technical and management direction to ensure programs are continuously updated.

Human Resource Planning and Development

1

• .

.

.

#### HUMAN RESOURCE PLANNING AND DEVELOPMENT DEPARTMENT LONG RANGE GOALS

- I. Provide program management in Human Resource Planning and Development to enable Central Engineering to understand and meet its technical and managerial staffing needs 3-5 years out. In so doing, help the organization accomplish the Product Strategy and help individual employees satisfy their career needs.
  - Provide organization development to line managers, technical contributors, and personnel staff as they work to achieve business and "people" goals. Provide a strategic focus on key areas such as organization climate, group interfaces, management systems and engineering processes.
  - 3. Coordinate our Department efforts with appropriate Corporate Personnel resources. In addition, collaborate with other DEC Personnel Departments.

				Wit Raymond		-Sufficient actions are taken to justify the data collection efforts.
						-Tewksbury is self-sufficient in administering an ongoing sensing process.
						-This is a prototype process for the rest of C.E.
In	support of Goal III (Corporate)			•		
9.	Corporate Internal O.D. consulting Group.	6/30/80	Guy (member)	Al Fitz (P.M.) John Meyer	М	-"Big ticket" items start to get worked across DEC.
				Joey Hiss		-Internal O.D. people help one another.
						-Al Fitz feels support.

Human Resource Planning and Development Department Objectives dropped since Squam Lake Meeting:

- A. Competency profile for O.O.D. level jobs.
- B. Consulting skill training for personnel generalists (i.e. no formal workshop training but hopefully informal training will occur via consulting projects).
- C. Joey's participation in Corporate Personnel Training Task Group (i.e. need an alternate).
- D. M.T.O. Evaluation (i.e. Guy is no longer project manager and plays a minimal support role).
- E. Wilkof Study (i.e. Guy only plays a minimal support role).
- II. Other potential Human Resource Planning and Development objectives not included in FY'80:
  - A. Human Resource Planning and Development:
    - 1. Support local (e.g. Software) Human Resource Planning efforts.
    - 2. Career planning/development process for Central Engineering Personnel staff.
    - 3. Career planning help for line staff (e.g. for "displaced" employees).
    - 4. Support supervisory policies/procedures training efforts.
  - B. O.D.:
    - Support general interface work with other functions (é.g. manufacturing, product lines, customer service).
    - 2. Supporting 0.0.D. on several of their goals (e.g. 3, 7, 8, 9, 10, 15, 20).
    - 3. Developing a general sensing/communications strategy for Central Engineering.
    - 4. Developing a strategy for Male/Female awareness training for Central Engineering.
- III. Guy Fincke's management objectives for FY'80:
  - 1. Assimilation program for Jeey.
  - 2. Annual objectives for Joey and Ann.
  - 3. Quarterly review on objectives for Joey and Ann.
  - 4. Quarterly report to John Meyer on key activities and accomplishments.
  - 5. Individual development plans for Joey and Ann.
  - 6. Annual performance reviews for Joey and Ann.

7. Annual salary reviews for Joey and Ann.

8. Recruit additional staff.

9. More visibility with Gordon, Larry and other 0.0.D. members.

INTEROFFICE MEMORANDUM

TO: Larry Portner/Gordon Bell DATE: 7 April 1980 FROM: Grant Saviers DEPT: Storage Systems EXT: 9765 LOC/MAIL STOP: ML3-6/E94

SUBJ: FY'80 OBJECTIVES

Attached are my comments on my FY '80 Objectives. I understand that we will discuss these on April 16th.

ems attachment

· move to CX. . Total bus. plan for Eng + mfg. FY80 OBJECTIVES STORAGE SYSTEMS DEVELOPMENT Suptem q (F+R)+ sogmentation of resp. below Saviere-Gutman, GOAL: leadership...competitive products - implement Redbook o strategy essentially unchanged or programs <=2 quarters late TUTT FtR o R80 against this stop. RP07 may overrun, TU78 ok - major programs <=2 quarters late - 75% overall on schedule o tough goal, longer planning focus is helping implementing phase review process to help 0 - removeable media tactics defined - five DECUS participants - ongoing o on target, process was productive o strong systems focus @ low end tactics have reasonable stability 0 - IR100 award > apply in FY80 o done, RAL02 - trade journal articles - 1 per quarter o ok, but still lots of missed opportunity; need to stimulate R80 team, RX04, RP07, TU78 - competitive pricing on new products o ongoing, RM05 looks very good GOAL: management structure and process...commitments... expectations....results - new FY80 Beige Book by Jan 1 o cancelled, except for revised FY '80 bugets - better FY81 Redbook, start Q3 o underway, on schedule - clear "functional requirements" - all new products o done, good process, need to improve quality and consistency - project reviews on six week cycle ongoing, implemented, quality dramatically improved, Mfg. starting to use effectively - "programs" defined by end Q2 only one for storage is new architecture, which 0 continues to look good GOAL: product line and systems groups support - quarterly status to group VP's and/or staff not done, in process of getting scheduled now, 0 Andy's 4/11/80 - systems participation in six week reviews by Q3 end need to have a better process, this one is wrong. 0 software is participating in CX and communications are valuable - clear systems interfaces by Q3 end thought that "systems focus" was ok. Now know expectations are divergent. Am writing our view. Our charter says what we mean.

#### GOAL: technology centers

- joint engineering/manufacturing plan by Q3 end
   o good program, 1 qtr. slip with overal OOD plan,
   best process in OOD
- approval in Q4
   o double, but dependent on OOD & Corporate strategies

GOAL: human resource development

- hire 40 college graduates in FY80 o on target, may overhire
- do functional college recruiting
   o ok, ME hire going exceptionally well
- clear college level "joining up" process by Q4 end
   o have outline and people thinking about it, but not
- implemented - systems lo
  - systems load test all new products by Q3 end
     moderate progress, software folks are helping (RM80). Still need more ownership by Storage Eng.
     managers. Have a TM78 plan.

GOAL: internal organization

- fill CX opening by Nov 15
- o complete (Lignos)
- fill floppy/cartridge tape by 1 Jan o complete (Bauer)
- quarterly woods meetings of Storage staff
   o Q2, Q3 done. Q4 scheduled
- minimize conflict ML/CX,PD/AD,PD/PM
  - significant progress, "team" is building, issues delegated to subcommittees, issues now legitimate, need closure

GOAL: stable....exciting....environment

- low end tactics by Q2 end
   o done, ongoing process working with Shanzer, Webber
   >=3 technology dumps per year ongoing
- o done, next one May 12, 13 - get into semi mainstream - use gate arrays in a project
  - o CX committed to do one ASAP & follow up with CAD tools
- Adv. Development initiated in CX in Q2
   o Jack Brown in place and hiring
- help with mechanical CAD
  - o contracted with other groups (terminals, sm. sys.)
    to provide support
- half of logic engineers learn logic CAD this year
   o SUDS generally in use in CX, terminals ordered for ML
- GOAL: track technologies
  - implement planning function done Q1 increased staff Q3
  - build metrics/models ongoing
  - expand forecast model to memory Q2
  - o complete - high end model/options by end Q3
    - o complete, presenting to Ulf, Busiek, will schedule Gordon
  - meet twice per year with major suppliers
    - o ongoing, meetings ok, need to develop a more formal process to survey non-suppliers, especially outside USA

GOAL: measure....as customers measure....and evolve

- do market research plan by Q3
- DECUS surveys ongoing, panel on storage at Chicago

GOAL: Increase market share...field merge

- all products dock merge certified at P.A.
   o almost hopeless
- continue proposing to DCG 1 "special" disk in FY80
  - o starting to push R80 looks like we have an excellent opportunity with CDS, also T & E floppy. Need to help them understand the market.

Grant Saviers October 22, 1979

Updated Comments April 4, 1980

#### CHARIER STORACE DEVELOPMENI

Storage Development is responsible for developing storage products that support the objectives of the corporation by meeting the needs of the Systems Groups and Product Line organizations.

- Develop and manage the corporation's technology and product strategy for storage devices.
- Insure jointly with the Systems Groups that the strategy is consistent with our systems goals and is as competitive as is feasible in the storage marketplace.
- 3. Implement the strategy by acquiring and/or developing technology, components, devices, drives, attachments, and subsystems. Develop quality products for the System Groups for systems integration and secondarily for Components Marketing if sold as a component.
- 4. Assist the Systems Groups and Components Marketing in their projects that tightly integrate standard high volume components, devices, or drives into systems or customer applications. Aggressively insure the use of standard products across the breadest range of applications.
- 5. Develop innovative products and subsystems to well-defined interfaces, interconnects, or software standards that are consistent with corporate architectural standards. The form, fit, and functional definition of subsystems are a joint responsibility with the Systems Groups.
- Actively assist the corporate move to a Systems focus via joint efforts with the Systems Groups in planning, analysis, and definition of storage functions, technology, and products.
- Be the primary focal point within the corporation for understanding the storage products, plans, technologies, and capabilities of storage suppliers and systems competitors.
- 8. Provide the product focussed business management of storage products for the corporation via Product Management.
- Establish a partnership with Storage Manufacturing that is responsive to the strategy and flexible in meeting the needs of our customers.
- 10. Strategically manage the relationship with Storage suppliers and lead our efforts to establish licensing, technology, or product exchanges.

Grant Saviers Sept. 1979

#### GOALS - STORAGE DEVELOPMENT

· ---

#### (approximate priority order)

- Develop or acquire leadership or at least competitive storage components, devices, and attachments across the product spectrum as rapidly as possible; these products should primarily match the systems needs of the corporation and secondarily, should be saleable as components. Recognizing that generally IBM has a dominating lead, we should excel first at the low-end and guickly extend this competitive position upwards.
- Be recognized as leaders by our customers relative to our systems, third party, and selected components competition.
- 3. Have management structure and process that makes good commitments, explicitly sets the expectations of those groups that are dependent upon us, and then insures that the commitments are met.
- Establish Product Line and Systems Groups support, so that we are responsive and competitive in providing the products that are needed.
- Continue to establish joint siting of engineering and manufacturing as technology centers, managing them for outstanding performance, for rapidly advancing process' intensive technologies.
- 6. Have an aggressive human resource development program that focuses on minority and female development and implements the majority of our recruiting at the college graduate level.
- 7. Emphasize the quality, reliability, and ease of use in the implementation of our products.
- 8. Have a clear internal organization that is simple and effective at its interfaces.
- 9. Take prudent risks and create a stable, stimulating, and exciting environment that is fun for "winners" to work in.
- 10. Track storage technologies and select a hierarchy of winners for the systems that we sell.
- Measure ourselves as our customers measure us and evolve our metrics as our markets evolve.
- 12. Increase our market share by encouraging the establishment of broader distribution channels and field merging of storage products at both the subsystems and component levels.

Grant Saviers Sept. 1979 FY80 OBJECTIVES - STORAGE SYSTEMS DEVELOPMENT

GOAL: leadership...competitive products

- implement Redbook
- major programs <=2 quarters late
- 75% overall on schedule
- removeable media tactics defined by Q2 end

GOAL: recognized leaders by customers

- five DECUS participants ongoing
- IR100 award apply in FY80
- trade journal articles 1 per guarter
- competitive pricing on new products ongoing

GOAL: management structure and process...commitments... expectations...results

- new FY80 Beige Book by Jan 1
- better FY81 Redbook, start Q3
- clear "functional requirements" all new products
- project reviews on six week cycle ongoing
- "programs" defined by end Q2

GOAL: product line and systems groups support

- quarterly status to group VP's and/or staff
- systems participation in six week reviews by Q3 end
- clear systems interfaces by Q3 end

GOAL: technology centers

- joint engineering/manufacturing plan by Q3 end
- approval in Q4

GOAL: human resource development

- hire 40 college graduates in FY80
- do functional college recruiting
- clear college level "joining up" process by Q4 end
- inventory personnel for development programs by Q3 end
- development programs for all managers by Q4 end
- two performance appraisals/year for all exempt levels by end of Q3

G 🔄: quality, reliability, ease of use....products

- push Field Service for written strategy by ???
- internal standards for physical customer interfaces Q3
- systems load test all new products by Q3 end

GOAL: internal organization

- fill CX opening by Nov 15
- fill floppy/cartridge tape by 1 Jan
- quarterly woods meetings of Storage staff
- minimize conflict ML/CX, PD/AD, PD/PM

GOAL: stable....exciting....environment

- low end tactics by Q2 end
- >=3 technology dumps per year ongoing
- get into semi mainstream use gate arrays in a project
- Adv. Development initiated in CX in Q2
- help with mechanical CAD

- half of logic engineers learn logic CAD this year

GOAL: track technologies

- implement planning function done Q1
- build metrics/models ongoing
- expand forecast model to memory Q2
- high end model/options by end Q3
- meet twice per year with major suppliers ongoing

GOAL: measure....as customers measure....and evolve

- do market research plan by Q3
- DECUS surveys ongoing

GOAL: Increase market share...field merge

- all products dock merge certified at P.A.
- continue proposing to DCG 1 "special" disk in FY80

Grant Saviers October 22, 1979

mout Sam

#### INTERDEPENDENT OBJECTIVES - STORAGE X OOD

implement Redbook - Sam & Bill must get interconnects settled and hardware implemented.

removeable media tactics defined by Q2 end - Good progress to date, but will require existing resources through Q2 by Dick, Bill, and Ulf.

clear "functional requirements" - all new products - Dick, Bill, and Ulf should provide customer usage, functional requirements, and the hardware/software alternatives to meet the needs. We need clear models and metrics as targets for technology solutions.

systems participation in six week reviews by Q3 end clear systems interfaces by Q3 end - We want dedicated, capable, visible, management level representation and interface to foster trust and communication with Dick, Bill, Ulf, and when appropriate BJ and Sam.

human resource development - John, I need a personnel manager! And staff!!!!

p Field Service for a written strategy by ??? - Si should help.

systems load test all new products by Q3 end -  $\Lambda$  discipline that should be improved. John should make this process clear.

get into semiconductor mainstream - use gate arrays in a project Jim could do more internal selling. Bill & Ulf should be more missionary when it's time for others to jump in. Dick, our micro development tools should be as good as Intel's.

help with mechanical CAD - Work with John H. to develop an OOD philosophy and strategy.

half of logic engineers learn logic CAD this year - John should make this easier and insure that hardware/software works and can be installed at reasonable cost and effort.

expand forecast model to memory - Probably GIGO applies now. Si should generate a credible systems forecast process and close with Product Lines on the numbers.

Grant Saviers October 22, 1979

SUBJECT: LATEST ADDITION OF OPERATIONS CHARTER AND GOALS

OCT 2:079

BDS/7

TO: 00D

DATE: October 2, 1979 FROM: Bruce Stewart DEFT: Central Ensineerins LOC.: ML12-1/T32 EXT.: 3-5432

Attached is the latest edition of the Charter and Goals for Operations. I have included, to the best of my knowledge, all the comments and suggestions which were agreed to at the Jungle.

If you have any further comments or suggestions which you would like to be reviewed, please forward them to me by October 14 as I would like to cast this in concrete after that date.

Tiks.

#### **DBS1/4**

#### OPERATIONS CHARTER

#### Context:

It has become apparent to the Central Ensineering organization that Digital has entered and is moving in a world computing scene characterized by compounding complexity. New technologies, corporate growth, expanding markets, expanding product sets and an increase in inter-group dependencies have all contributed to the complexity.

Central Engineering accepts that complexity in all of the above areas is on the increase, and management techniques and organization structures must evolve to handle this complexity.

The advant of the Central Drerations activity as part. of OOD along with the PM4 are the latest of the changes to help Central Engineering core.

Score.1

The primars function of the Central Operations activity will be to define and implement the minimum, but sufficient, set of measurement and planning criteria to allow for the sensitive and sensible management of Central Engineering. The measurement and planning criteria will be arrived at by augmenting rather than replacing existing systems and techniques.

Amons the items which Central Operations intends to influence are:

o Flanning process and completeness

o Review methods for products, programs and options

- o Change control for working documents
- o Dependency management
- D Budget to performance coordination

In all the above it is Operations role to develop and administer the process, not to do it. The doins is a line management responsibility. In all of Central Operations activities, we will endeavor to build on existing process and minimize bureaucratic overheads.

It is intended that the Operations' activity will brind about behavioral change which will allow each individual to do his or her Job better. Success will allow the Corporation to better understand and deal with the development associated problems.

#### OPERATIONS GOALS

- To evolve new systems or processes from existing systems or processes which will facilitate the achievement of the Central Engineering management strategy.
- 2. To educate managers as to the requirements for plans and planning.
- 3. To inspect plans for status and viability.
- 4. To coordinate inter-group activities in such a way as to cause reviews to be held in the event of significant mismatches.
- 5. To coordinate inter-group plans to ensure completeness and consistency.
- 6. To install review mechanisms that will allow for problem identification and resolution.
- 7. To install escalation procedures which will alert Central Ensineering management to the need for review.
- 8. Via the PM4 ensure that dependent parts of the Company are aware of problems in Central Engineering which may impact their performance.
- 9. To coordinate Operations activities in each group with Central Operations.
- 10. To administer the management process (planning calendars, budget calendars, Red Book, Yellow Book, etc.
- 11. To help establish budget to achievement measurement techniques.

/ma

CENTRAL OPERATIONS OBJECTIVES FOR FY80

- 1. TO HIRE TWO STAFF CAPABLE OF ACTING AS MANAGEMENT SYSTEMS CONSULTANTS BY JANUARY 1980.
- 2. TO ESTABLISH THE ADMINISTRATIVE STRUCTURE TO HANDLE FLAN REPOSITORY, CHANGE CONTROL, AND REPORTING BACK BY JANUARY 1980. THIS STRUCTURE WILL ALSO PRODUCE A STATUS BOARD/REPORT WHICH WILL ALLOW FOR STATUS CHECKING AT ANY TIME BY MARCH 1980.
- 3. TO ADMINISTER THE RED BOOK, BEIGE BOOK, YELLOW BOOK, BUSINESS PLANS, AND PRODUCT PLAN SUMMARIES BY MARCH 1980. THIS WILL INCLUDE REGISTRATION, CHANGE CONTROL, AND THE NECESSARY CHECKS AND BALANCES TO ENSURE THE RE-LATIONSHIP BETWEEN THESE PROCESSES.
- 4. TO ACT AS AN AUDIT ACTIVITY ON MANAGEMENT PROCESS AND RECOMMEND CHANGE WHERE NECESSARY. ON GOING.
- 5. TO ENSURE THAT INTELLIGENCE EXISTS WHICH CAN LOOK AT DEPENDENCIES AND FLAN VIABILITY BY JANUARY 1980, IT IS INTENDED THAT THE PEOFLE FROM #1 ABOVE WILL BE CAPABLE OF PERFORMING THIS ACTIVITY. THIS OBJECTIVE WILL LOOK AT ALL PLANS WHICH WE HAVE FOR COMPLETENESS AND SANITY AS WELL AS ENSURING THAT DEPENDENCIES ARE CONTROLLED WHERE NO SYSTEM OR PROGRAM FOCUS EXISTS.
- 6. WORKING WITH LARRY PORTNER TO ESTABLISH AN ESCULATION MECHANISM BY FEBRUARY 1980.
- 7. TO TAKE THE AGREED REVIEW PROCEDURE FORWARD AND SET UP A LIST OF PROGRAMS AND FREQUENCIES BY JANUARY 1980.
- 8. WORKING WITH SI LYLE AND LARRY PORTNER, ESTABLISH A DOCUMENT SET AND AP-PROVAL PROCEDURE FOR CENTRAL ENGINEERING BY DECEMBER 1979.
- 9. COMMUNICATE #8 AND SEE IT WORKING IN CENTRAL ENGINEERING BY JUNE 1980.
- 10. TO ESTABLISH A FUNCTIONAL OPERATIONS ORGANIZATION ACROSS CENTRAL EN-GINEERING BY DECEMBER 1979. THE INTENT HERE IS TO FOCUS ON THE MANGEMENT SYSTEMS/FROCESSES ACTIVITIES IN EACH ORGANIZATION AND FROVIDE A DISCUS-SION/ACTION FORUM.
- 11. VIA 10 TO START ELIMINATION OF DUPLICATE ACTIVITIES BY MARCH 1980.
- 12. WITH MITCH KUR START AN ACTIVITY TO MEASURE PROJECT ACHIEVEMENT VERSUS PROJECT SPEND BY JANUARY 1980. THIS OBJECTIVE INCLUDES EVALUATION OF THE CURRENT FINANCIAL REPORTING MECHANISM WITH AN EYE TOWARD CHANGE WHERE NECESSARY. ACTUALLY REPORTING ON THIS BASIS WILL BE TARGETED FOR FY81.

13. TO ASSESS THE RESULTS OF THE REVIEW PROCESS WITH GORDON BELL AND LARRY PORTNER AS TO COST VERSUS BENEFIT BY JUNE 1980.

.

.

.

14. TO CONTINUE TO WORK WITH THE LINE UNITS TOWARD COMPLETE MANAGEMENT SYSTEMS IN THEIR INDIVIDUAL AREAS. ONGOING. Personal Goals

# INTEROFFICE MEMORANDUM

TO: Larry Portner

DATE: 31 July 1979 FROM: John Holman DEPT: EXT: 3-5533 LOC/MAIL STOP: ML12-2/T36

SUBJECT: My personal agenda

Key items on my personal agenda are

- 1. Fill Financial, Personnel openings for managers.
- 2. Absorb Vonada, Verostic into organization.
- 3. Get cost center signature authorization straightened out. We could come to a grinding halt.
- 4. Get Paul Bauer to make up his mind.
- 5. Revitalize our RFI/EMI activity. Ken's suggestion of a consortium meeting is an excellent one. It could identify:
  - A. Issues
  - B. Talent
  - C. Corporate Direction
- 6. Pick a name for our group. Any ideas?
- 7. Tewksbury Power & Packaging Leadership.
- 8. P.C. Technology owner should be identified soon. I feel that this problem belongs to me via Tays, Lawrence.
- 9. Carefully review the basis of each budget to establish my agreement. I feel uneasy allowing people to hire additions.
- 10. Get Jerry Butler up to speed in CSS as quickly as possible.

/jm

While we're busy focusing on getting our goals, charters, objectives and the like sorted out, I have this gnawing concern that we may let something important slip through the cracks in the short and intermediate term aspects of managing our business, particularly in areas that have new occupants in the key jobs. I believe that we need to reaffirm quickly what our major focus should be for the next six months. I'm sure there are issues in Sam Fuller's space that relate to technology and architecture; John Holman, I'm certain, has a set of issues that have the potential, unless understood, to squeeze us in a capacity bind for critical services. Major strategic issues lie within the domains of each of the line organizations and in particular I'd like to highlight those that are spread across several organizations - these are the ones that everyone assumes that someone else is going to take care of. Specific examples here may be Distributed Processing, the HYDRA program, and I'm sure there are others.

In this context, would each of you please just drop me an informal note giving me your current list of items that are on the top of your personal agenda or should be on the top of the O²D agenda for us to keep our finger on while we move forward in longer term directions.

· Setting the adv. Der activities in pphoducts and semi Mfg neutructured to insure we make key programs happen - VRNUS (MCA), PUSART (HTOS) · Frioress for better product / 2 Sd clanning linking

INTEROFFICE MEMORANDUM

ALG 18 TH

U

O: Larry Portner

DATE: 13 August 1979 FROM: Grant Saviers DEPT: Storage Systems EXT: 9765 LOC/MAIL STOP: ML3-6/E94

SUBJ: PERSONAL AGENDA ITEMS (Q1)

- Develop an organization strategy jointly with Portner and Bell (underway).
- Commence implementation of reorganization (Riggle and Gutman finding out about it).
- Establish a periodic program review system (discussed with staff no plan as yet).
- Get TU/TM78 to critical Mass and meet commitments (offers out, have a plan).
- Work with Removable Media Task Force to develop the strategy (underway).
- 6. Continue to observe, learn, listen, understand the OOD process. Work at developing the relationships.
- Start working the Product Line interface (meet with Marcus' staff, 8/28/79.
- B. Hire some top talent. (Hired Ed Burke starts 8/20/79).
- Follow up on CDC 7/25/79 meeting. Meet with STC, MRX, and ISS. (Legal doing non-disclosure.)
- 10. Solidify Gordon's position on HSC. (Fuller to publish note.)
- 11. Get LRP dialogue started with Puffer (meeting of our staff on 9/26/79).

#### SUBJECT: ATTACHED AGENDA

TO: State of the Company Meeting Attendees

We are glad you are able to attend the Dec. 1 State of the Company Meeting in Merrimack II. The attached agenda indicates the topics to be covered.

When you arrive at the Merrimack II facility, please park your car in one of the two parking lots closest to the building. They will be cordoned off specifically for meeting use. When you enter the building, there will be signs to guide you to the meeting room, which is on the first floor in an area very close to the reception desk.

If your office needs to reach you on Dec. 1, they can leave a message by calling 884-6732 or 884-3879 (the DTN is 264). Messages will be available at the registration table during the breaks. Telephones will be available for return calls. You can use them, at no cost, to make DTN calls, but must use your credit card to call outside the company.

State of the Company Meeting Agenda

December 1, 1982

A PROJECT EXPERIENCE (IN THE OLD DIGITAL)

Specify the schedule: 9...27 Months to FCS

ESTABLISH A PROGRAM OFFICE TO COTORDINATE AND TRADE-OFF: Service, Manufacturing, Marketing, Design Processes, Scheduling, etc.

ESTABLISH A DESIGN GROUP AND LEAVE THEM ALONE TO ORANIZE, ARGUE AND TRY TO WRITE SOME SKETCHY SPECIFICATIONS ABOUT THE PRODUCT

UCCASIONALLY REVIEW BUT CONCENTRATE ON THE PROCESS, NOT THE PRODUCT

PREDICATE DESIGN ON QUICK DESIGN, BUILD, SEE IF IT WORKS METHUDULOGY where a poor, half-done breadboard is somehow Built to learn from, followed by a redesign (or two) that will be manufactured,

Avoid: UNDERSTANDING, CONFLICT THAT COMES FROM DESIGN TRADE-OFFS, TIMING ANALYSIS, FORMAL (COMPUTER CHECKABLE) INTERFACES, VERIFICATION, DESIGN INSPECTIONS, SIMULATION, ETC.

MANUFACTURE AND WAIT FOR THE ECOs

## VENUS EXPERIENCE

Ketoki, Sirger, Glor

I got interest

Have Just a

the Beroonnel full day!

(AN EXAMPLE, OF THE QUALITY DESIGN METHODOLOGY) get the right people

COPY AND INSTALL THE IDEAS FROM COMPLEX VLSI DESIGN AND SOFTWARE :

ORGANIZE IN A HIERARCHY OF CHIEF DESIGNER, PROJECT LEADER lief designers! K IPMENT, PERFORMANCE AND BOX PROJECTS (EACH WITH CHIEF DESIGNER AND PROJECT LEADER) ... IN A TEAM! We had 0,1, , , 4

ESTABLISH CLEAR GOALS: EG. QUALITY, SHIPMENT, PERFORMANCE AND COST

and sport desuch

CHARACTERIZE THE PROCESSES AND COMPONENTS (EG. GATE ARRAYS, MODULES)

BE ABLE TO UNDERSTAND THE "STATE OF THE DESIGN" AUTOMATICALLY - that is the st machine & people know - not the VENUS EXPERIENCE CONTINUED

PREDICATE THE DESIGN BASED ON THE QUALITY DESIGN METHODOLOGY:

WHERE AT EACH STEP, THERE ARE NO ERRORS ...

DESIGN IT CORRECTLY, VERIFY AND MODEL IT, INSPECT IT, TEST IT VIA SIMULATION, AND THEN BUILD IT (AND EXPECT IT TO OPERATE AT POWER ON)

USE THE PHYSICAL HIERARCHY TO SEGMENT THE DESIGN AND ESTABLISH FORMAL CONTRACTUAL BOUNDRIES AMONG THE TEAM

USE THE LOGICAL HIERARCHY TO SEGMENT THE DESIGN IN TIME AND MAKE SURE THAT THERE IS ALWAYS A "RUNNING" (SIMULATED) DESIGN!

> The reward is the neipt

REPEAT ON THE NEXT DESIGN!

Problem: what to do

This is a complete , Bown

THE SIXTH GENERATION, BASED ON KNOWN AND EVOLVING IDEAS ABOUT BETTER COMMUNICATION WITH HUMANS, THEREBY CREATING MORE USE +----+
! digital! interoffice memorandum
+-----+

Subject: <u>Product Managers</u>

To:	Operations	Committee	Date:	10 APR	IL 78	
			From:	Gordon	Bell	
			Dept:	OOD		
			Loc.:	ML12-1	Ext.:	2236

What are they doing (see attached definitions)?

Integrating the product/business needs over the:

1. Levels of Integration

(Usually 1 PM per 1 or more products at a level.)

- 2. <u>Various Organizations</u>: mainly outside of engineering

3. <u>The Business Plan</u> that evolves over the Product Phases (time).

<u>The basic philosophy</u>: Locate PM with Engineering Group that designs and (internally sells) the product. (Extensions of the "old time" project engineer who's "completely responsible" for the product.)

Current groups and their relationship to Pots

	Level	Location	Pot
↑	• Turnkey:	PM's in P/Ls	-
SW	'Mkt. Packaged:	Specific market P/L	-
$\downarrow$	• Operating System	RT/C; Comm'l; Comm./Nets	same as dev.
1	• Hardware System	Comp. Sys. Development (eg.LSI-11,VAX,11,10)	Base; T/SS.
Hdw.	• Options	Disks/tapes; Memories; Terminals; Comm. Options	Storage; T/SS.
$\checkmark$	• Chips	Microproducts; chip dev.	-

<u>Product Managers</u> are "managed" by the following groups in a single PM Manager:

•	RT/C; Commercial; Communication/Nets	3
•	Small Systems and Terminals	1
•	VAX/11; PDP-11 Packaged Systems (all 11s)	2
•	Storage Systems; Memories	3
to	otal externally marketed products	9

Subject:	Product Managers	Page 4
G. Bell		4/10/78

What's wrong with Product Management? How can they be more effective?

- 1. There is not a plausible sales and support plan that goes across: <u>P/L</u>'s, <u>Sales</u>, <u>F/S</u>, <u>SWS</u>. This would include PPG and literature during a product's life, not just at announcement.
- 2. We need and are instituting a strong phase review.
- 3. There should be more visibility of the product <u>groups</u> at the corporate level. Also, we focus too much on component level (e.g., RLO1) at the exclusion of systems.
- 4. There should be a functional boss to be able to transfer activities and iron-out interfaces among the 9 groups. (This would also give them a stronger role, better direction, and show the growth/career path.)

Note, there are separate two-level groups now!
this would tie them all together so that strategic issues like pricing could be worked in a more coherent way.

- 5. The results of products have to be reviewed in some way the Corporate Red Book is reviewed.
- 6. There must be a long term product strategy beyond the Red Book.
- 7. Coupling with sales to avoid multi P/L noise.

#### II. Job Description

The following job description describes the product manager's functional responsibility, product life cycle responsibility, integration process responsibility and the line authority/power myth.

#### A. Functional Responsibility

From an overview sense, the product management role includes responsibility for all traditional functional business areas, including engineering, manufacturing, product line marketing, product promotion, sales, field support, and finance whenever appropriate and necessary from an integration of Digital's business from a product viewpoint. Some areas of appropriate product management responsibility should include:

BUSINESS FUNCTION

#### PRODUCT MANAGEMENT INTEGRATION RESPONSIBILITY

Engineering

Development resource allocation

• Phase-in, phase-out volume plan

- Detailed product definition
- Phase review status
- Testing and Verification

Manufacturing volume plan

• System component mix plan

- Performance Measurement
- Business plan

Manufacturing

Product Line

Marketing

Product Promotion

Sales & Support

Finance

• Competitive analysis

• Market Analysis

• FA&T inventory plan

- Marketing strategy, including pricing and distribution channels
- Analysis of shipment data
- Shipment forecast
- Promotion plan
  - Sales communication
  - Advertising and press releases
  - Brochures, handbooks & product configuration
  - Sales strategy, including hardware and software field support
  - Field service pricing and spares strategy
  - Key customer support
  - Analysis of bookings data
  - Bookings forecast
  - Product gross profit margin
  - Return on assets, especially plant, equipment, and inventory
  - Actual vs budget variance analysis

#### B. Product Life Cycle Responsibility

The product manager's functional responsibility occurs throughout the entire product life cycle, from product conception through announcement to phase-out. The attached chart, from Bob Steingart, provides a more detailed understanding of hardware project phases and attributes. A similar software project phases and attributes understanding exists.

#### C. Integration Process Responsibility

I define product management as a process organization, with the role to achieve the integration of Digital from a product viewpoint whenever appropriate. This role is analogous to Bill Thompson's corporate planning function integration of the corporation to develop a corporate plan.

I define integration as the process of working with people with different functional and project operation goals and together developing common plans and solutions to problems at multiple organizational levels.

I measure my product managers on their ability to be a catalyst, not doing the task themselves in general, but helping the responsible individuals and organizations within Digital achieve results. This help should be in the form of truly understanding issues, and being able to present clear data substantiating that understanding.

#### III. Levels of Product Integration

Some confusion exists between the similarities and differences of product management and system management, or product managers responsible for products at different levels of product integration. I believe the functional business responsibilities are analogous, although the specific developers of the product and specific customers of the products differ because of the product's particular location within the level of product integration.

The attached chart provides the general levels of product integration. Product managers in all positions are trying to fulfil the needs of their customers, both outside Digital as represented by the product lines selling the product to these customers, and inside Digital as represented by the engineering group responsible for developing the next higher level of product integration shown by the next column to the right in the chart. The product managers in all positions are also trying to influence their developers, both the lower level of product integration component development shown by the next column to the left in the chart, and the product development shown in the same column in the chart.

The product manager at all levels of product integration brings together the technology push from the development side with the market pull from the customer side to achieve a profitable business from a product viewpoint.

### PRODUCT MANAGERS AT DIFFERENT LEVELS OF PRODUCT INTEGRATION

-

#### DIFFERENT DEVELOPERS AND CUSTOMERS

Job Title	Product Manager	Product Manager	Product Manager	Packaged System Manager (Small and Large)	Market System Manager (Commercial, Real Time and Computation)	Product Line System Manager
Level of Product Integration (Layer of the onion)	Chips	Module Product, Power Supply, Cabinet	Product	Packaged System (Excludes Soft- ware Language)	Market System (Includes Software Language)	Turn Key Product Line System
Product Example	Fonz-ll Chips	LSI-11 Modules	11/03, RK05, RSX	11T03	DS322	Word Processing
Developers of Components	None	Microproducts Development, Semi-conductor Industry	Module Development	Product Development	System Engineering	Market Syste Software Engineering
Products	Microproducts Development	Module Development	Product Development	System Engineering	Market System Software Engineering	Product Line Engineering
Customers of Components (Inside Digital)	Module Development	Small Systems & Terminal Devop- ment	Systems Engineering	Market System Software Engineering	Product Line Systems Engineering	None
Product (External to Digital)	Components	Components	OEM	OEM	End-user	End-user

#### IV. Line Authority/Power Myth

Many people continuously raise the issue that product managers should have line authority. This is often raised by product managers who are leaving the role. I believe that the staffing of product manager's roles with senior people able to fulfil the entire job description across all business functions including engineering, manufacturing, marketing, sales, and finance, equivalent with the senior people in these other functions at Digital today is essential. How can a junior individual, given a product management role, possibly influence a vice president of a Product Line who has been doing his functional job for five years?

After filling in the ranks with senior managers, then they must have the tools, such as financial product line brown book equivalents, business plan review boards, group product manager meetings, and other tools to give them the information flow and knowledge base to perform the product management function.

After staffing with strong managers and building up the tools to provide essential knowledge to product managers, I believe there will be no question about their real authority. Strong people with solid knowledge about a decision will have the implied authority to make decisions, whether the formal authority is given to them or not. In fact, people without knowledge should not have decision making authority, since it is unlikely this formal authority will result in the best decisions for Digital.

I personally feel I have one of the most powerful jobs within Digital today, and I do not feel the frustration of not having line authority. I believe most of the product managers working for me today also have the same feeling of power, without line authority. Although the product lines have formal profit/loss responsibility, in general they do not have line authority over many of the business functions they are measured on, which results in the same form and style of product line management by knowledge, not line authority.

----

#### V. Organizational Structure

If you believe in the importance of the product manager's contribution to Digital and the product manager's job description, then this organization's concept is suggested to improve the product manager's contribution.

The current organization has product managers, in general, reporting to engineering managers, sometimes product managers and engineering managers reporting to the same manager, and occasionally the engineering manager reporting to the product manager.

My goal for product management is that the focus should be much broader than engineering alone. I believe that although closely related to engineering, the product manager's integration role also provides significant product responsibility in other functions including manufacturing, product lines, product promotion, sales, field support, and finance.

To achieve this total job description, an additional functional product manager reporting structure could help in providing product managers with managers who fully understand the engineering, manufacturing, marketing, sales, field support, and finance job responsibilities. In addition, this would provide the career path growth ladder to attract and maintain strong individuals within the product management function.

For additional details on this functional organization proposal, please see the separate product management organization proposal.

## KEY

PSG = Product Services Group

- SWS = Field Software Support Management
- PM = Product Manager
- PLM = Product Line Manager
- SEM = Software Engineering Manager
- C = Create--Source of analysis and determination--Center of information, motivation and responsibility
- Recommend and review
- A = Approve

#### NOTES:

(1) Still unclear--Needs further definition.

- (2) Centrally funded, cross market product managers.
- (3) Approval is from funding source which in the case of PL20 is the appropriate product manager.

# INTEROFFICE MEMORANDUM

то:

John Fisher

DATE:	September	7,	1973

FROM: Bob Puffer and David Stone

EXT :

DEPT:

SUBJ: Product Managers

On August 10, Dick Clayton, Win Hindle, Andy Knowles, Julius Marcus, Bob Puffer, and David Stone met to discuss the role of product managers at DEC as requested by the Operations Committee. The central controversy was whether product managers should reside in the central development areas (as criginally suggested by Andy) or in the product lines (as suggested by Win). After some discussion we concluded:

- Major products need product managers to prepare the business plan and carry out the tasks described in Attachment 1.
- 2. We defined "major" by listing a representative set of existing projects which need product managers (see Attachment 2).
- 3. It is the responsibility of the development manager to see that there is appointed a product manager wherever necessary, however, those product managers may reside in one of three places:
  - a. <u>In a product line</u>; this is most appropriate when the product line is a major user of the product (e.g., RPO4 product manager should be from the 11/45 or DECsystem-10 area).
  - b. In the central development group; this is most appropriate for a widely shared cross-product line product. The person might be borrowed from a marketing area because most development groups have few marketing people (e.g., DOS-11 product manager should be in the Software Engineering group).
  - c. The product manager may be the same person as the project engineer. This is most appropriate in the early stages of a high technology development effort (e.g., Steve Teicher's minimal-11).

We agreed that product management should not be a career but should rather be an assignment of limited duration.

TO: SAC MANAGERS

INTEROFFICE MEMORANDUM

DATE: 21 July 1983 FROM: Bill Johnson DEPT: SAC TEL: 223-3982 LOC/MAIL STOP: ML012-1/U29

#### SUBJECT: A DEC MANAGER'S JOB

I recently gave a talk at Marlboro on "DEC Culture". During that talk, I discussed my expectations of all DEC employees; managers specifically. I have since thought that it would be a good idea if I wrote down my definition of a manager's job. This is also the definition of my job since I am a DEC manager.

A manager is first and foremost a leader and a doer. A manager should propose what should be done and then make sure it gets done. No one at DEC should do things only because "I was told to do it". This applies especially to managers. DEC managers should believe in the value of the work they are directing. A manager bears a special responsibility with respect to doing the right thing for DEC. He or she directs the efforts of many people. Wasting people's working lives is very destructive.

Leaders are certain types of individuals, not titles. The real leader of a project is not necessarily the person at the top of the organization chart. Good managers do not worry about their titles, they see things to be done and get them done. They provide support to people in leadership roles.

A manager must develop trust. DEC is not a very formal company. Much of the real nature of an employee's duties has been defined over time. A manager and an employee must have a trusting relationship if this kind of working relationship is to function. I believe a manager should be very candid with his or her employees on a continuing basis. There should never be any surprises at performance review time.

A good manager is an informed risk taker. I say "informed" because being bold is not enough. Risks should be taken when the manager feels that there is a good chance of producing a quality product. Frequently a good manager "buys in" to someone else's high risk project. This is good as long as he or she believes in the other person's vision of what should be done.

Managers must listen to people, especially the people working for them. The people who do the day-to-day work of an organization are usually in close touch with what is possible and what is not. A good manager convinces his or her people that what they are doing is worthwhile. There are no second class citizens or organizations at DEC. If a group of people perceive themselves as being part of a second class organization, it is part of the manager's job to find out why they feel this way. If there is a real problem, the manager fixes it. If the problem is psychological, the manager changes the way the group thinks about itself. Similarly, managers should not permit other groups to be viewed as second class.

Managers are sensitive to the needs of their employees. Keeping people productive is a key management function, after all, they do the real work, not the management. A good manager always has time for his or her employees, especially those that truly need help. Since the people are the first priority of the manager, there is, by definition, always enough time to attend to their problems and listen to their suggestions. Special attention should be paid to those situations where people are being nonproductive although they are doing their best. If the problem is the system in which these people function, a good manager changes the system.

Managers must recognize that only they can remove many of the roadblocks that prevent high productivity. This is an ongoing job, new roadblocks appear each day. This productivity should be used to produce high quality products. I expect DEC to be an industry leader in the production of quality products. Managers must help build and support a working environment that produces quality products.

Finally, a manager should be an example for his or her employees. A manager who does the job, never passes the buck, and treats other people with respect will find those traits appearing among the employees. Every manager is a role model to some extent. A manager who is respected and who is a decent human being will experience problems sometimes, but will always be in a position to call on his or her employees for support when things become difficult.
