

Ms. Esther Dyson
President
EDventure Holdings, Inc.
375 Park Avenue
New York, NY 10152

March 19, 1990

Dear Esther,

Thank you for spending time with us last Friday. It was a pleasure to have lunch with you and Daphne.

I would like to summarize hereafter the terms of our conversation.

The Eastern Europe Panels have been allocated three hours:

- one exclusive hour Monday, not competing with any other activity
- one hour Tuesday, in parallel with corporate presentations
- one hour Tuesday, in parallel with a vertical panel session.

As a panel chairperson, you will have full responsibility in organizing your panel. This includes:

- defining the editorial content of the panel and giving it a title
- selecting and inviting the panelists
- setting up the sessions and communicating to us how you would like things to be done
- informing us of the names of the participants (for registration purposes)

We would like to know the final titles of the panel sessions very soon, so that we can complete the conference program.

You volunteered to help us inviting the keynote speakers.

I noted that you would:

- speak to - Jack Tramiel
 - Scott McNealy
- place a good word to - Bill Gates
 - Andrew Grove

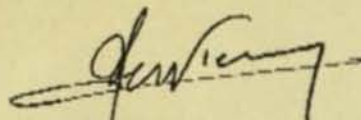

Please give us some feedback when you have reached them so that we can follow up closely.

Thanks for mentioning ETRE in your list of conferences. Any additional help in publicizing the event would be appreciated.

We are enthusiastic about your organizing a conference in and on Eastern Europe, despite the challenges (or perhaps because of the challenges?). We will try to use our contacts in Europe to spread the word about it.

Thank you again for your contribution. We are delighted to count you as a chairperson and we are looking forward to working with you. With kindest regards.

Sincerely,

Alex Serge Vicux
President

DASAR Mission

- ▶ DASAR establishes international operations for technology firms. This encompasses:
 - identifying business partners and setting joint ventures
 - raising capital from international sources
 - building distribution networks
- ▶ DASAR, through a systematic analytical approach:
 - consults on business strategy
 - advises on localization of product design and marketing
- ▶ DASAR provides a roadmap for CEOs. It answers their daily questions on international business:
 - Where to start first?
 - Which are the growing markets?
 - How to enter these markets?
 - Who are the most appropriate partners?
 - How to finance international growth?
- ▶ DASAR counsels American and European distributors in locating emerging technologies, negotiating contractual agreements and monitor the relationships.

The DASAR Way

- ▶ DASAR derives its international expertise from:
 - its broad range of overseas contacts and long standing relationships
 - its access to local information through ETRE's network
 - its experience in steering small companies to the right partners
- ▶ DASAR's team of professionals offers:
 - start-up operating experience
 - international credibility

- ▶ The DASAR network has access to the industry leaders who:
 - finance emerging technology corporations
 - seek joint venture agreements
 - constitute the marketing and distribution infrastructure
 - create new technologies

Time to Market Consulting

- ▶ DASAR allows emerging technology firms to reduce their time to market in the international arena and facilitates their access to American, Asian, and European markets.
- ▶ DASAR works with CEOs in assessing their international priorities and implementing their strategies. DASAR will:
 - enable technology firms to pinpoint their value to specific markets
 - structure the business plan and identifies appropriate resources
 - define opportunity zones and country risks
 - advise on joint ventures and distribution agreements
 - devise pricing strategies, product introductions, and communication plans
- ▶ DASAR is well positioned to launch international operations for emerging corporations. It can:
 - incorporate the new venture
 - structure the operation
 - recruit the managing team
 - launch sales distribution and train the salesforce

International Financing

- ▶ DASAR recognizes the diversification of the international capital pool. Oftentimes the right partner is crucial in helping a young firm gain entry to local markets.
- ▶ It serves as an advisor and represents technology firms in search of acquisitions, equity swaps or mergers.
 - It identifies venture capital sources from three continents.
 - Then it guides emerging firms in their choice of investing partners.

ETRE

- ▶ The European Technology Roundtable Exhibition is the leading forum for Presidents and CEOs of the technology industry. The conference brings together several hundred American, Asian, and European industry leaders, entrepreneurs, venture capitalists, and distributors. ETRE held its first event at the Club Med Conference Center in Opio, France, near Nice.
- ▶ The conference:
 - provides a forum for the decision-makers of the computer industry to exchange views on technology directions and international strategy
 - introduces start-up companies and technology innovators to venture capitalists and mature firms
 - promotes discussion among American and Asian executives and European policy makers on current regulations and legal issues

The New Global Order

"The edge that a company gains from establishing an overseas operation from the start rather than two years later may be the difference between success and failure."

Ms. Esther Dyson

September 26, 1991

Dear Esther,

It was a great pleasure organizing the 1991 edition of ETRE and sharing exciting moments at Opio with you. I hope that you have had interesting conversations with some of the 500 participants who joined us, coming from 27 countries around the world. Based on our discussions with many of the executives, we understand that the conference was very eventful.

Your involvement is essential to the success of our international gathering. In addition, the friendship we are building with you has been as important as the conference itself. Alex would like you to accept, as a symbol of our appreciation, a Hermes scarf.

I just returned from France yesterday and I am finalizing all of the outstanding issues. You will find attached your honorarium fee. I would appreciate if you could forward us the information regarding your trip over to France so that we can reimburse your airline ticket.

We look forward to hearing your comments and exchanging views on this year's event. Maybe we will have the opportunity to share dinner in California or in New York sometime before the end of the year. I hope to see you soon.

With kindest regards,

Joëlle Préaux
Executive Director

Roundtables

The following schedule lists the chairperson and participants in each of the roundtable sessions. Summaries of these roundtables are provided in *Who's Who at ETRE*. The rooms for each session are shown next to each of the roundtable listings.

Keynote Roundtables

Regulations and Policies in 1992

Tuesday, October 16 9:30 am - 10:15 am

Participants:

Philippe Dreyfuss, Cap Gemini Sogeti
Dominique Strauss-Kahn, French National Assembly
Judge Howard M. Holtzmann, Holtzmann, Wise & Shepard

Palladio

The American Dream

Monday, October 15 9:00 pm - 10:00 pm

Chaired by Don Clark

Participants:

Eric A. Benhamou, 3Com
William J. Schroeder, Conner Peripherals
Umang P. Gupta, Gupta Technologies
Kamran Elahian, Momenta
Patrick Perez, Neuron Data
Gianluca Rattazzi, Parallan Computer

Palladio

MONDAY, October 15

8:30 am - 9:30 am

IT.1 PCs & Workstations: One Market or Two?
Chaired by Brenton Schlender

Participants:

Sam Tramiel, Atari Corporation
James H. Clark, Silicon Graphics
Claude Perdrillat, SMT Goupil
Douglas MacGregor, Solbourne Computer

Opio

IT.3 Operating Systems: At the Crossroad
Chaired by Giuseppe Caravita

Participants:

William M. Crow, Hewlett-Packard
Patrick Laffitte, Memsoft
Steven A. Ballmer, Microsoft Corporation
Larry Michels, The Santa Cruz Operation

Antibes

IT.4 The Computer in the Home of the Future
Chaired by Steven Kaufman

Participants:

Kai Brüning, B&E Software
Douglas G. Carlston, Brøderbund
Theo Wegbrans, NeXT
Edward V. Lauing, Power Up Software Corporation

Chateauneuf

S.3 Culture Clash: Ownership and Nationality in High-Technology
Chaired by Jonathan Levine

Participants:

Robert C. Miller, MIPS Computer Systems
William Patton, Parallan Computer
Reiner Hallauer, Siemens AG
John P. Frank, Zenith Data Systems

Grasse

S.4 Starting Up In Europe: Mission Impossible?
Chaired by Jacques Gauchey

Participants:

Eckhard Pfeiffer, Compaq Computer
Yann Houdent, ISE-CEGOS
Bernard Vergnes, Microsoft Corporation
Terje Mikalsen, Mosvold Farsund

Following is a list of companies displaying their products.

Articulate Systems

The Voice Navigator is a SCSI peripheral device which come with the Voice Navigation System software. (Patent pending) This system integrates voice recognition with the graphical user interface providing the first and only general purpose Voice interface for the MacIntosh. The Voice Navigation System also has the capability to record voice or sound. It is even possible to use voice recording in combination with voice recognition to access electronic mail, record a voice message, then address and send the message using voice commands. Voice Link is a serial device with a built in microphone for voice and sound recording.

Dragon Systems

Dragon Systems will demonstrate its latest speech recognition product, called Dragon Dictate.TM This system allows PC users to create memos, reports, novels--any free text -- simply by speaking instead of typing. Dragon Dictates is the first commercial, general purpose, voice-driven typewriter. Its users include the disabled, people in "hands busy/ eyes busy" environments, such as radiologists reading X-rays and dictating diagnoses in the dark, and business people who don't know how to type.

Ergo Computing

The Brick: The next-generation modular Brick is the first "Portable Desktop" personal computer-- a PC with a desktop power that can fit inside a briefcase. The brick features a 16 Mhz Intel 386SX microprocessor. It can be configured with one to eight MB of RAM and up to 200 MB of hard disk storage. Extended VGA graphics and an internal 2,400-baud Hayes-compatible modem are standard. Complete system prices start at \$2,495.

Flytech Technology Co., Ltd.

The Carry-I 9000 series book-size desktop computer is perceived as a new standard and a third dimension in modern computing, penetrating the realm uncovered by laptops or PC "monster". Despite its size at 45mm x 185mm x 240mm, the computer can be packed with 286/386SX CPU, 1 to 4 Mbyte RAM, 1 x 1.44 Mbyte FDD, 1x40-80 Mbyte HDD, CGA/MGA/VGA and a 8 bit SLOT & space for most half size interface cards such as Ethernet, 3270, modem etc..

The Graphics Technology Group Limited

DataBase Publisher, marketed by IBM, is establishing itself as the de facto standard for the production of quality publications automatically from corporate databases in a fraction of the time and cost of current conversion methods. A reasonable estimate of market potential for this unique package is based upon 10% penetration of the DTP market, both in volume and in revenue. Windows 3 available by mid 1991.

Technology Room (Cont.)

Valbonne II

Lernout & Hauspie Speechproducts

Manufacturer of multilingual user friendly man/machine interfaces (over-the-phone) integrating voice processing technologies: text-to-speech conversion (making machines/computers listen to human voice input), voice recognition (making computers recognize, verify, and identify human voices), voice dictation (turning a PC into dictation machine) and low bitrate coding technology (mass digital voice storage). Integrated technology available on PC board with telephone interface. Languages available or in progress: French, Dutch, German, English, Spanish, and American English. Other languages on request. Lernout & Hauspie Speechproducts voicelab counts 85 multidisciplinary multilingual staff. This fastly growing company welcomes OEM and licensing agreements.

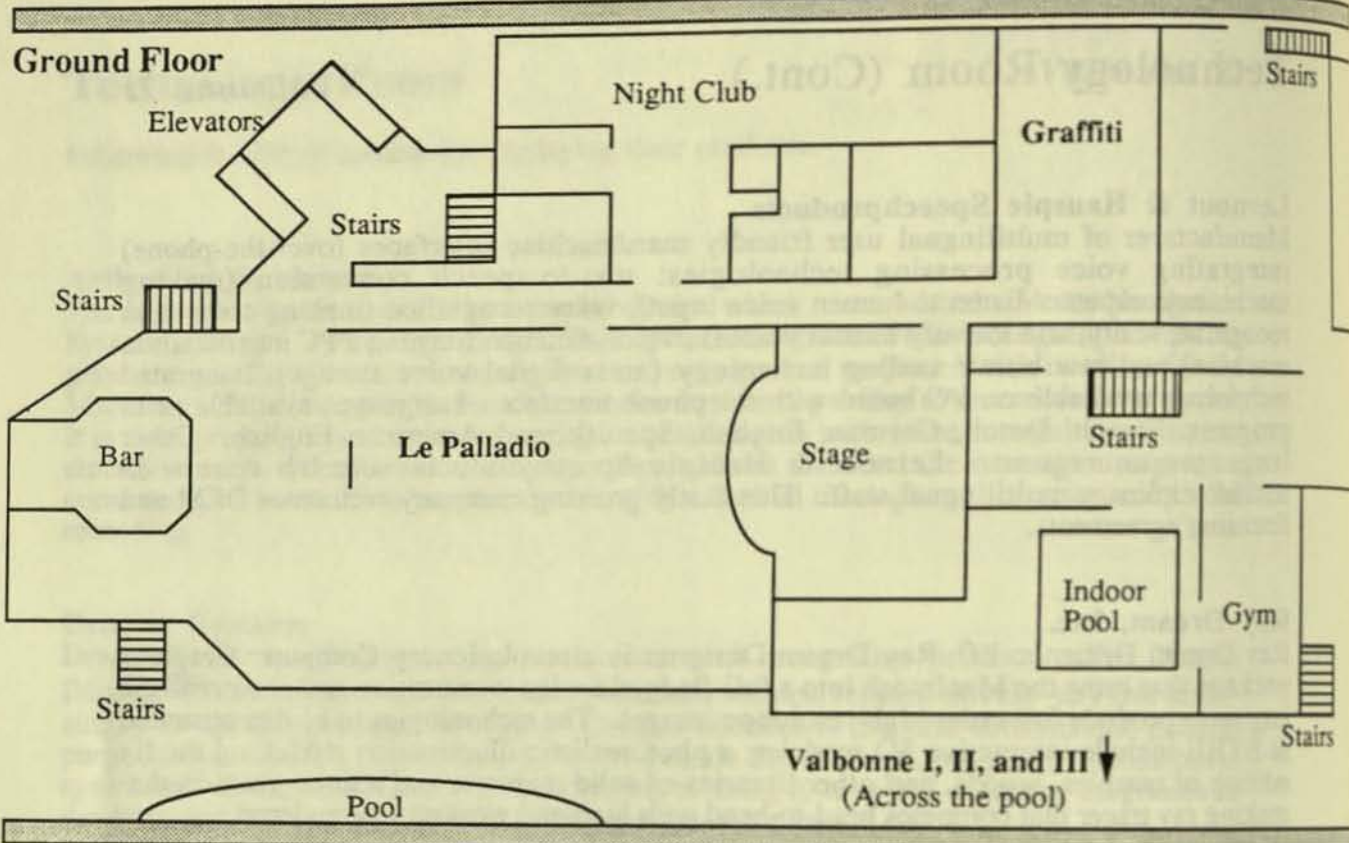

Ray Dream, Inc.

Ray Dream Designer 1.0: Ray Dream Designer is a revolutionary Computer Graphics package that turns the MacIntosh into a full-fledged design workstation and photorealistic engine to produce full-color high-resolution images. The technologies to be demonstrated at ETRE include interactive 3D modeler; a photorealistic illumination model; on the fly editing of marbles, woods, and other libraries of solid textures; and a three-years-in-the-making ray tracer that competes head-to-head with high-end workstation renderers.

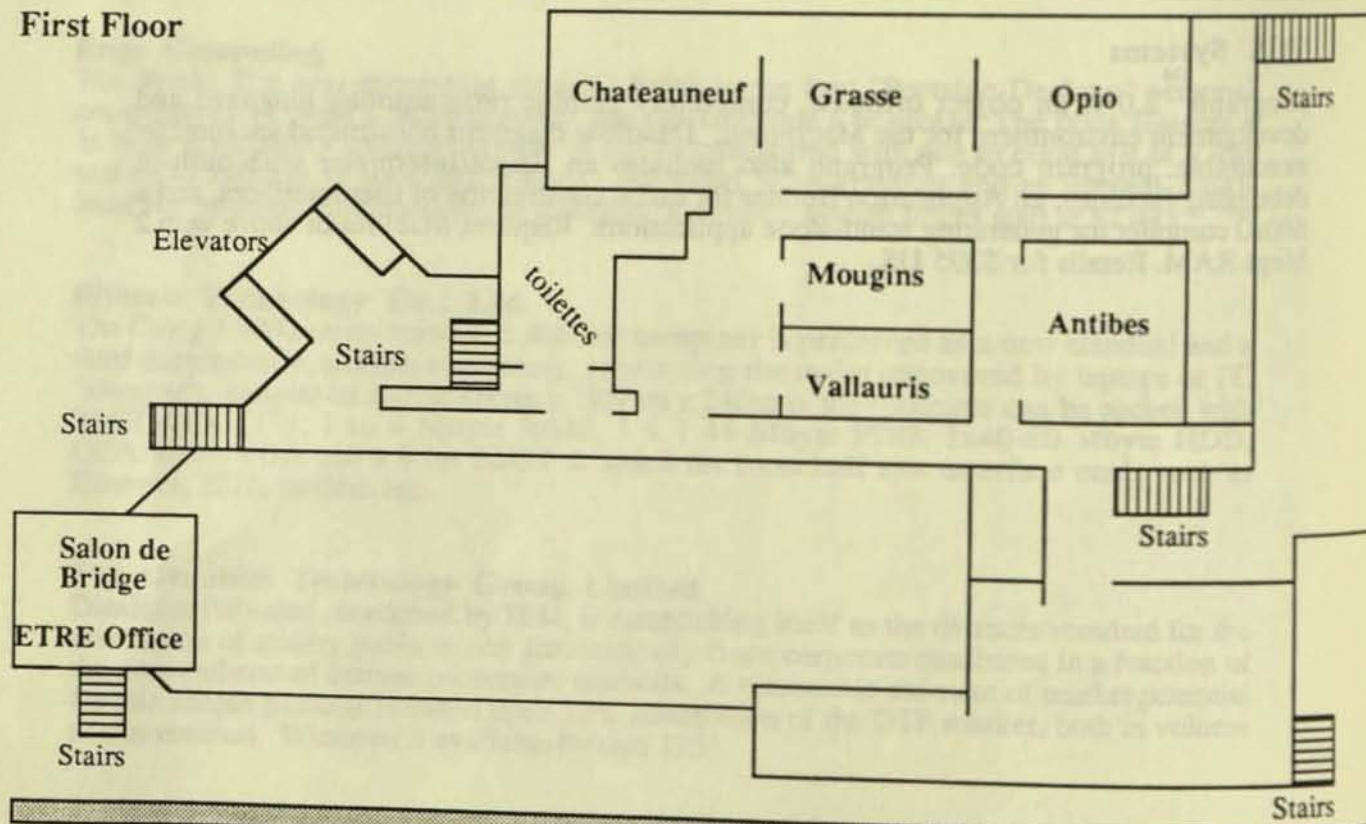

TGS Systems

Prograph 2.0 is an object oriented, completely graphic programming language and development environment for the MacIntosh. Dataflow diagrams constructed are directly executable, program code. Prograph also includes an Editor/Interpreter with built-in debugging facilities, an Application Builder for quick construction of user interfaces, and a 680x0 compiler for generating stand-alone applications. Requires MacPlus or above with 2 Megs RAM. Retail for \$395 US.

Animatrix

Since 1984, Animatrix has pioneered the design of interactive communication. Today, Animatrix provides design services in three areas: sales and marketing, learning, and interface design.

Sales and Marketing

Animatrix creates new product demos for clients such as Adobe, Aldus, Kodak, Lotus, and Hewlett-Packard, as well as corporate capability pieces such as a recently completed project for the international design firm, Landor Associates.

Learning

A user's first introduction to the Macintosh comes by way of the highly acclaimed animated "Guided Tours" products by Animatrix for Apple Computer. Animatrix builds complete training systems, such as a disk based course for "Preventing AIDS and Hepatitis B in the Workplace" and "The Guided Tour of the Outbound Laptop System," as well as design consultation for corporations with in-house resources, such as Tandem Computer and Pacific Bell Directory.

Interface Design

Animatrix designs graphic interfaces for access to mainframes, such as the national information system designed for Domino's Pizza Distribution, as well as access to information on compact disks, such as the "Reference and Presentation Library" for Apple Business Marketing.

ASIC Technology & News

Nanci J. Magoun
Chairman and Publisher

Ms. Magoun is the founder and chairman of *ASIC Technology & News*, a venture capital-backed publishing and information services company serving the application-specific integrated circuit and electronic design automation (EDA) industry.

ASIC Technology & News, based in Mountain View, CA, publishes a monthly business and news magazine read by more than 40,000 executives, system development managers and design engineers, who represent virtually every major OEM company in the United States. The company also sponsors several industry events including an annual executive forum in late spring and is launching an international design engineering and ASIC exposition (IDEA 1991) in Silicon Valley next April.

Previous to founding ATN in January 1989, Ms. Magoun spent the last seven years in the electronics industry including five years (1982-1986) at Fairchild Semiconductor working both in ASIC applications engineering and marketing. Immediately thereafter, she served at Dataquest, a leading technology market research company, as an industry analyst. Her responsibilities there included providing clients with insight about electronic equipment trends and the associated IC requirements, with a focus on computers and peripherals.

Ms. Magoun is an avid tennis player and serves as a contributing writer for technology articles for *U.S. World and News Report*.

Barnsley Communications, Inc.

Barnsley Communications was established in 1990 to market the image compression software and hardware products designed and developed by Iterated Systems, Inc. which is based in Norcross, GA. These products exploit the new technology of Fractal Image Transforms which is based on the research carried out by Dr. Michael Barnsley. Barnsley Communications is privately owned and has sales offices in Europe and throughout the USA.

Barnsley Communications believes that the vast volume of data required to represent images in a computer readable form is currently a limiting factor in many areas of technological development. The problem is even greater when such data must be transmitted from place to place. The products supplied by Barnsley Communications are the only comparable image compression/decompression products that provide a 'software only' decoder for IBM microcomputers (or compatibles) which requires no special hardware.

P.OEM Developers' Kits

These kits enable developers of software for 286 and 386-based PCs to integrate Fractal Transform Decoders into their application software. Currently kits for monochrome and color (EGA, VGA and super VGA) are available.

P.OEM Encoder Boards

Final tests are being carried out on the P.OEM Encoder Board for still images. This board is IBM AT compatible and will enable developers to encode images using the Fractal Transform method. Future boards are planned which will be capable of encoding video images in real time.

Barnsley Communications has been funded with \$12 million of venture capital by Benjamin Enterprises A/S which is backed by four well-known Norwegian groups: Benjamin A/S, The Norwegian Association for Science and Technology, Four Seasons Venture A/S, and the Farsund Group.

Barnsley Communications will be represented at ETRE by Dr. Michael Barnsley. Dr. Barnsley is co-president of both Barnsley Communications, Inc. and Iterated Systems, Inc.

CDFI

The CDFI Group consists of seven software houses that cover the whole French territory. Their activities focus on three areas: general and specific software packages, facilities management and associated services, and engineering.

Markets Information

The revenue distribution in 1989 has been 38% for software packages, 45% for facilities management, and 17% for engineering.

The strategy of the Group consists of:

- holding a leading position for its software packages by supplying a permanent assistance to the customers and a top technical control as well as an ongoing update of the products according to the latest improvements of data processing techniques;
- providing facilities management customers with a large range of flexible and secure solutions to manage the means required by their data processing systems;
- integrating hardware and software tools involving all types of platforms from micros to mainframes.

Cunningham Communication, Inc.

Founded September 11, 1985
38 employees
Privately held

Cunningham Communication, Inc. is a Silicon Valley-based consulting firm specializing in the development and implementation of strategic communication and market strategies for high technology companies.

Company Positioning and Strategy

Cunningham Communication is a public relations firm creating strategic communication programs for high technology companies. Our objective is to help our clients win in the global marketplace. Our approach is to unite marketing and communication in an attempt to redefine public relations as an essential and vital component of the business strategy. As a catalyst for the development of that strategy, we provide or coordinate virtually every service within the communication scope. We believe we earn the right to be a partner with our clients — and that is our goal.

The high tech industry is maturing to a point where features are easy to copy. Almost anyone can make a chip, system or software package deliver what many other products offer. Therefore, communication has become a critical element of the business strategy. And positioning has become essential to effective communication. At times, it involves modifying the corporate vision, other times the market reality. Most often it's a combination. When the two come together, then we have succeeded.

Portfolio clients include Aldus Corp.; Autodesk, Inc., Multimedia Division; Borland International; C-Cube Microsystems; Digital F/X; Electronic Arts; Hewlett-Packard Networked Systems Sector, Software Engineering Division and Worldwide Customer Support Operations; Interactive Systems Corporation, a subsidiary of Eastman-Kodak; Metaphor Computer Systems; Motorola Microprocessor Products Group; ParcPlace Systems; Pillar Corp.; and Truevision.

Financial Information

CW Publishing Inc.

CW Publishing is the publisher of *Computerworld*, a tabloid newspaper for MIS professionals. Established in 1967, *Computerworld* reaches over 600,000 computer professionals each week. The newspaper has 200 employees and is affiliated with International Data Group (IDG), the world's leading publisher of information on information technology.

Technology/Markets Information

Computerworld delivers the most powerful purchasing group ever assembled. They are individuals who drive decisions for technology investments: the developers of strategy, builders of architecture, specifiers of tools, and providers of services through which users attain the benefits offered by their applications. Together they form the sphere of influence critical to technology vendors.

These people rely on *Computerworld's* hard-hitting, analytical editorial. Through the pages of *Computerworld*, they equip themselves with the strategy, application, and product information they know they can confidently and successfully use for making serious business decisions.

Dakota Microsystems, Inc.

Founded 1988
14 employees
Privately owned

Dakota Microsystems is developer and marketer of the intelligent Uninterruptible Power Supply (UPS) on a PC plug-in card.

Technology/Market Information

Dakota is positioned as the company with "smart" power products — products with automatic power back-up and data saving functions.

The company plans to dominate the emerging market for intelligent power products through the development of new applications.

The product line is comprised of two products:

The PowerSave 500, a PC compatible, DOS-based product, automatically uses specific protocols, without computer user intervention, to provide power and data protection. During the typical power lapse of up to two seconds, the on-board NiCad batteries carry the computer through. If power has not been restored within two seconds, all computer memory is saved and written to the hard disk drive. When power returns, the system automatically restores to its original state. It saves all memory on 8088/86 and 286 systems, and conventional memory on 386 and 486 systems.

The PowerSave 500 PLUS has all the functions of the PowerSave 500, plus full memory saving capabilities on 386/486 systems.

Financial Information

Revenue information

Revenue through December 1990 is estimated to reach \$2 million.

It is expected that 1990 will be a profitable year.

International revenue is over fifty percent of total sales.

Equity structure

Private funding of \$750,000 has been utilized.

Current company valuation is estimated to be over \$5 million.

A further funding of \$1.5 million is anticipated.

DCM Limited

DCM Limited, the Delhi Cloth & General Mills Company Limited, was founded in 1989 by the illustrious Lala Shriram. Started as a textile company, it soon diversified into several fields — sugar, fertilizers, chemicals, vegetable oils, silk, heavy engineering, electronics, and computers. During the 1970s, it became the fourth largest industrial house in India and "DCM" became a household name to the millions of families.

The corporation is managed by a highly qualified professional team that was led until 1985 by Dr. Bharat Ram, who was the first Asian to become President of the International Chamber of Commerce. The present Chairman and Managing Director is Dr. Vinay Bharat-Ram, who was greatly responsible for the high-tech diversification (DCM Data Products, semiconductor unit, DCM Toyota, etc.) of the DCM group.

The major interests of the DCM group lie in:

- Computers (design and manufacture)
- Foundries (grey iron castings), and
- Real Estate

apart from textiles and other products.

DCM Data Products, the computer unit (established in 1972) ranks among the first five largest computer companies in India. It is engaged in the design and manufacture of PCs, mini-computers, microprocessor-based industrial controllers, and many software products.

The Foundry unit is one of the largest and most modern in India and is a major supplier to many large automobile, truck, and tractor manufacturers in the country. One of the largest customers is the Indian partner (manufacturer) of Suzuki, Viz Maruti.

DCM has a major interest in real estate in Delhi, which is valued at \$300 million.

DCM group has also major controlling interests in:

DCM Toyota — a joint venture between Toyota Motor Corporation of Japan and DCM, for the manufacture of light commercial vehicles (DYNA Class), and

Shriram Fibres (SRF) — largest manufacturer in India of nylon tire cord for automobile and truck tires and also auto electricals in association with Nippon Denso of Japan.

Ergo Computing, Inc.

Ergo Computing, Inc. was founded in 1986 and develops microcomputer products in two areas: DOS Extender software and personal computers. Based in Peabody (Boston), Massachusetts (USA), Ergo is a privately held company with 60 employees.

Ergo recently introduced a new category of personal computer — the portable desktop. Ergo's product, the Brick, addresses the market between laptops and desktops by offering exceptional portability (only 8 x 20 x 28 cm and 3.7 Kg), with uncompromised performance (386/486 performance with over 200MB hard disk). The Brick is the first of a line of modular "designer" computer products that can serve many different types of users.

The company has a history of innovative technology developments; it introduced the first 386 add-in board, the HummingBoard. The first DOS Extender, OS/386, broke the DOS 640K memory barrier and is now widely used in major software applications such as Borland International's Paradox and Cadam's MicroCadam Plus, among others.

Ergo is also developing new techniques in value-added factory-direct distribution. Bricks can be ordered completely loaded with software to the customer's specification, including a unique "Talking Tutorial." The Talking Tutorial explains by spoken word, played back on the Brick, how to use each software program. Also, each Brick incorporates a modem, permitting the company's support team to offer virtual desk-side support. If problems arise, the support team can operate a customer's system remotely, as well as update BIOS and application software.

The Brick has been nominated for *PC* magazine's prestigious Technical Excellence Award for Design.

Ergo is building relationships with major distributors for international markets. Ergo has signed international distribution agreements with Métrologie (France, Spain); Singapore Technologies (Southeast Asia); and TECNAD (Switzerland, Luxembourg). Ergo is currently seeking distribution partners in additional territories.

To support the roll-out of the Brick, the company in May 1990 completed its first external funding. Participating were key corporate and venture partners including ASCII Corp. of Tokyo, Japan; DSC Ventures, Cupertino, Calif. (funded by Ray Noorda, Novell CEO); Singapore Technologies Industrial Corp., Singapore; and Bank of Boston, Boston, MA. Projected revenue in 1991 is US\$100 million.

Tom Spalding, Founder and President of Ergo Computing, will represent the company at ETRE. Before Ergo, Mr. Spalding was a founder of PictureTel, Inc., now the market leader in video conferencing. In 1979 he received an Emmy Award for the first live, in-racecar camera system which debuted at the Daytona 500. His first business, Warehouse Sound Co., started while he was a college student, became the largest U.S. direct marketer of HiFi equipment and a chain of retail stores, and was later acquired by CBS, Inc.

Feeder

Established 1984
60 employees
Private ownership; member of "Groupe ISE"

Feeder is the number one software and peripherals distributor in France, selling to resellers.

Technology/Markets Information

The company is the number one distributor in France, selling to dealers, VAR's, SSII. Products are software packages and peripherals on PC and Macintosh environments. Main suppliers are Microsoft, Claris, IBM, Lotus, Aldus, ISE Cégos, Borland, Epson, ACI, NEC, Kortex, La Commande Electronique, among others.

Frame Technology Corporation

Frame Technology develops and markets integrated computer publishing software for creating and electronically distributing a wide variety of business and technical documents.

Technology/Markets information

Frame Technology's principal product, FrameMaker[®], is a powerful, yet easy-to-use publishing package ideal for multi-platform, multi-author publishing environments. Frame software is available on over 25 different platforms, supports multiple foreign languages, and has an installed base of over 40,000 users worldwide.

No other publishing software integrates such complete authoring, layout and hypertext capabilities across so many platforms. Frame is one of the first company's to successfully develop and market the concept of a floating software license.

Frame has already captured a significant share of the fast-growing computer publishing market which is estimated by Dataquest to reach over \$B by 1992. A recent survey that appeared in BusinessWeek ranked Frame as one of the 25 fastest growing start-ups in a database of 30,000 high-tech companies. Frame competes successfully against much larger players in an increasingly competitive marketplace and has grown by over 75% or more every year since it was founded. The company attributes its success to a first-rate management team, technically superior products, penetration of all major platforms and distribution channels in the workstation market, and top-notch customer service and support.

Hercules

Hercules Computer Technology, Inc. of Berkeley, California, is a privately held developer and manufacturer of innovative PC display cards and solutions for high performance graphics and imaging applications for IBM PC compatible computers.

Founded in 1982, Hercules pioneered the PC add-in card industry with their first product, the Hercules Graphics Card, setting the standard for monochrome graphics for the IBM PC.

Today, Hercules maintains its reputation for creating high quality products that move the industry forward. Its recently launched products, the Hercules Graphics Station Card, and the Hercules Art Dept., are the first to bring affordable 24-bit true color to standard VGA monitors. With the flexibility to run all standard business applications, its latest offerings are targeted at CAD, DTP, Windows, and X Window markets.

Leveraging technology alliances and distribution partners, Hercules plans to accelerate the introduction of new products in the 1990s.

Industry/Product Awards

- 1990 The Hercules Graphics Station Card is nominated for *PC* magazine's Editor's Choice for Technical Excellence.
- 1989 Softsel 7th Anniversary Hot List Award, celebrating 250+ weeks on the Softsel Hot List.

JP Morgan

J.P. Morgan & Co. Incorporated, whose origins date to a merchant banking firm founded in London in 1838, provides banking and other financial services to corporations, governments, institutions, and individuals throughout the world. Its activities include providing corporate finance advice and arranging financing, underwriting and trading securities, and managing pension and other investment funds.

J.P. Morgan & Co. is listed on the New York, Amsterdam, London, Paris, Switzerland, and Tokyo exchanges (symbol: JPM).

Strategic Strengths: J.P. Morgan in the 1990s

J.P. Morgan & Co. enters the 1990s a dramatically different institution, ready to seize the opportunities created by worldwide change. As the last decade has transformed global finance and business, so we have transformed ourselves, shifting our focus to meet the new needs of our clients.

Relationships that until a few years ago hinged on our ability to supply funds are now broader and more varied. Now we act as our clients' advisor, helping to shape their financial strategies. We act as intermediary, providing access to capital and investments, and helping them manage risk. We meet our clients' need for a firm that will listen, that will understand and solve the largest and most subtle challenges they confront.

These roles are not entirely new to J.P. Morgan. They are rooted in our historic position as global financial advisor and intermediary. And they spring from our well-established strengths — strengths we are committed to constantly renewing.

L.I.R. Logiciels pour l'Informatique Répartie

Founded in 1979 as a French Société Anonyme (limited company), LIR is a privately owned company with 210 employees and an annual revenue of 200 million French Francs. It operates a subsidiary in San Jose, California.

Technologie Markets Information

LIR is fully independent of all manufacturers and offers a full range of data communication software for the mini- and micro-computer market.

These software are compliant with the OSI, CCITT and mainframes protocols such as IBM and Honeywell BULL.

Three fields of activity are involved: the portable software, the data communication products, and the consulting and manpower.

The portable software is available under license in source code form and covers the X.25 family, the SDLC and QLLC access to IBM, the VIP, TG and ISO DSA access to Honeywell BULL with the corresponding terminal emulators, file transfer, and API.

The communication boards for PC and local area networks range from intelligent cards with OSI and mainframe software running simultaneously to full datacom servers. They are compatible with IBM PCs under DOS, OS/2, UNIX and Macintosh, offering gateways between LANs and X.25, transactional access to IBM and Honeywell BULL, and electronic mail.

Consulting and manpower is offered mainly to computer manufacturers for the adaptation of licensed software to their dedicated equipment and it includes support for certification in all European and North American countries for its own products and the complete RETIX OSI software. Hot line support and maintenance is available in Europe, the U.S., Canada, and Japan through its subsidiaries or technical partners.

Financial Information

For the last three years LIR revenue has an average annual increase of 45% per year and the company has been profitable since founded. LIR is privately owned by its founders and two French institutional investors.

Locate in Scotland

Established 1981
70 employees

Locate in Scotland (LIS) was the first one-stop inward investment bureau in the UK. LIS is a joint government + Scottish Development Agency operation.

Technology/Markets Information

Set up to provide a professional, comprehensive service to potential inward investors, LIS has four main operational purposes:

- Marketing Scotland overseas as a location for investment
- Advising potential investors
- Negotiating an appropriate development package
- Providing aftercare to investing companies

Investors need only contact one single coordinating body with the capacity to deliver turnkey development packages geared to the needs of client companies. LIS aims to answer all the inquiries which inward investors have on matters such as site location, property provision, education, manpower, labor performance, communications and telecommunications, local subcontract and component and service suppliers, and the quality of the cultural and physical environment. LIS can also provide advice and assistance with loan and equity funding and can directly deliver government financial assistance where appropriate.

Key target markets are North America (served by four offices in Stamford, Chicago, Houston, and San Mateo), the Far East (through our Tokyo and Hong Kong offices), Europe and Scandinavia (from Brussels and Glasgow) and the rest of the UK (London and Glasgow).

Key sectors include electronics, healthcare, advanced engineering, and financial services sectors.

The success of this strategy is illustrated by the range of companies that have been attracted to Scotland, including Sun Microsystems, JVC, NEC, Mitsubishi Electric, Direct Line, Bankers Trust, Compaq Computer Corporation, Caledonian Paper, and Conner Peripherals. The total number of overseas manufacturing companies who have established operating bases in Scotland is now over 300. Within the last financial year alone (1989-90), over 64 overseas projects invested in Scotland, bringing almost 10,000 new jobs and over £850 million investment to the economy.

Logiciels pour l'Informatique Repartie

LIR (Logiciels pour l'Informatique Repartie) is a group of companies dedicated to the field of data intercommunications. LIR, established in 1978 at Orsay, France, is privately held and employs 225 people worldwide. Estimated revenue for 1990: \$40M. LIR Corporation was set up in California in 1989 to service the U.S. and Pacific Rim markets.

The LIR Group provides data communication products and services, enabling local and wide area network systems to intercommunicate. LIR has placed special emphasis on European and international standards and has established itself in a position of European leadership for data communication software such as X.25 packet switching, and OSI, as well as providing connectivity to de facto standards such as IBM's SNA and Honeywell Bull's DSA, TGT and VIP.

LIR Corporation offers and supports a comprehensive range of products and services.

Portable Software

X.25, X.3, X.28, X.29, X.29M, X.32, X.123

SNA (SDLC and QLLC) and terminal emulations (327x including 3279 and 3279G, 328x ...)

Honeywell Bull (VIP, TGT), terminal emulation (SKU, TTU), ISO/DSA

Unix™ Software

X.25 under UNIX V version 3, conformal with the STREAMS implementation.

WAN Communication Boards (FPX™, AT-FUT)

This family of boards offers X.25 and PAD facilities under DOS, OS/2 and UNIX (interactive and SCO). These boards, which are fully downloadable, also provide SNA and BULL connectivity as well as Retix's OSI Transport and Session. This family of boards is currently available for a wide range of buses such as PC, AT, MCA, MULTIBUS™, and VME, with NUBUS to be announced shortly. The software running on these boards is derived from LIR's portable offering, thus providing an entire range of fully compatible products.

An on-board real time system allows the boards to operate as a multi-media, multi-user WAN gateway in a LAN environment or as a stand-alone configuration.

Engineering Services

LIR provides engineering services to its customers in the portation of LIR software to their specific environments. This facility is not limited to LIR's own products but to any type of software in which LIR has developed a unique competence, such as the portation of Retix's OSI.

Consulting Services

LIR provides consulting service to those U.S. companies who are targeting international markets. By incorporating all of the relevant international and, more specifically, European data communications features in their designs, LIR's consulting services can enable those companies to compete successfully in these markets. LIR Corporation also supplies, on a contract basis, the specialized manpower in both the U.S. and Europe that may be required by its clients, and can assist in the certification process required for product acceptance in the various European countries. LIR is uniquely positioned as a group to offer support on both sides of the Atlantic.

NetFRAME Systems Inc.

General Information

NetFRAME Systems, Inc. is a privately held company that develops, manufactures, and markets a family of network server platforms for personal computer-based local area network environments.

The company was started in 1987 by Carlton G. Amdahl, a veteran mainframe computer scientist, and Enzo Torresi, co-founder of Businessland, Inc. Mr. Amdahl currently serves as Chief Technical Officer and Chairman of the company; Mr. Torresi is President and Chief Executive Officer. NetFRAME currently has 105 employees.

Technology/Markets Information

NetFRAME's "network mainframe" systems were designed specifically for client/server computing and combine the high reliability, data integrity and security of mainframes with the simplicity, flexibility and cost advantages of personal computers.

By taking a fresh architectural approach to increasing input/output (I/O) throughput, NetFRAME created the first family of dedicated server platforms that are compatible with PC network operating systems and applications -- NetWare 386 and OS/2 LAN Manager. NetFRAME systems -- the NF100, NF300 and NF400 -- offer a wide range of scalable performance and expandability.

NetFRAME systems have been shipping to corporate customers since late 1989, and are sold worldwide by highly qualified resellers and system integrators. Olivetti markets the NetFRAME family on an OEM basis to customers throughout Europe, Canada and Australia.

Financial Information

- Corporate Technology Investors: Apple, Olivetti, Xerox, Chips & Technologies
- Other Investors: Paine Webber Development Corporation; Morgan Guarantee Trust; Fleming Venture Fund; Kleiner Perkins Caufield & Byers; Bessemer Ventures; Menlo Ventures; 3i Ventures; MK Global Ventures
- Equity investments in the company total \$29.5 million
- Company valuation established at \$108 million
- Completed third-round, \$12 million private financing in June, 1990

NeXT Computer Inc.

Founded September 1985.

500 employees.

Highly automated factory in Fremont, CA

Senior Staff:

Steven P. Jobs, Susan Kelly Barnes, George L. Crow, Randy R. Heffner, Richard A. Page, Todd Rulon-Miller, Guy L. (Bud) Tribble, Theo Wegbrans, Phillip E. Wilson.

Company Mission:

NeXT Computer, Inc. designs, manufactures and markets "Interpersonal Computing" systems that promise to enhance the way groups work together in the 1990's. NeXT sells its products directly and through selected retail and VAR channels in North America, Asia and Europe.

The NeXT Board of Directors:

Chairman: Steven P. Jobs

Directors: Dr. John P. Crecine, president, Georgia Institute of Technology;
Ross Perot, founder, Electronic Data Systems and the Perot Group;
Hisashi Sakamaki, director, Business Systems Operations, Canon, Inc.

Financing:

1989-Canon Inc.: \$100 million

1987- Ross Perot, Steve Jobs, Stanford University, Carnegie Mellon

University: \$26 million

1985- Steve Jobs: \$7 million

Ownership:

Steven P. Jobs, 50%

NeXT employees, 20%

Canon, Inc., 16.67%

The Perot Group, 12.51%

Stanford University, 0.41%

Carnegie Mellon University, 0.41%

Pro forma Valuation:

\$600 million (including \$100 million investment)

Higher Education Advisory Board:

Currently consists of representatives from 22 leading universities in the nation, and one member who also serves as the president of EDUCOM, a non-profit consortium of colleges, universities and other institutions that provides leadership to higher education and helps its members introduce, use and manage information technology. The NeXT Advisory Board, which first met in October 1986, provides guidance to NeXT on products.

Headquarters:

900 Chesapeake Drive,
Redwood City, California 94063
(415) 366-0900

NeXT Computer, Inc. has offices and operations in the United States, Canada, and the United Kingdom.

P.N.B.

Established 1985

40 employees

Ownership: 66% shared between two founders; 26% Métrologie International; 8% Paribas Bank

P.N.B. designs and manufactures modems, particularly for the micro-computer environment. The company has created a range of modems covering the market's actual needs. Its structure also permits specific requirements in the most complex environments.

The range of P.N.B. modems covers add-on cards for PC and PS/2, boxes and pocket modems. P.N.B. modems are used for communications with terminals and micro-computers; these modems are built in the form of specific cards or may come in the form of external units.

P.N.B. has a position as leader in an original market niche, the OEM modems, and is the only current manufacturer of portable modem/fax in Europe. Leader in multi-modem cards for portables on the European market.

More than 10,000 modem/fax cards supplied to manufacturers of micro-computers in 1989. Today, there is no established competition even on the American market.

Quantities produced by P.N.B. for the European market: 20,000 (30,000 if the modem/fax card is counted) which represents 50% of the European market in 1989.

The most prestigious names in micro-computing: Apple, Compaq, Zenith, Toshiba, Nixdorf, Bull, Epson, Wang, Data General, Grid, SMT-Goupil, and Daewood, have chosen a P.N.B. solution. P.N.B. has thus become the OEM supplier of most of the major brands. Very often, specific modems are designed for each OEM customer. This is particularly true for modems that equip terminals or portable micro-computers.

P.N.B.'s Strategy for the Three Coming Years

- To pursue its location in Europe and OEM contracts with new partners
- To continue to set up in the North-American market
- To maintain the price and miniaturization policy for modems to follow the evolution of the micro-computer world
- To develop ISDN interfaces (digital transmissions) which, in the coming decade, will play the role of the modem of today.

Product Awards

- Rewarded at FIGARO "High Tech" - KPMG
- Number One in "High Tech" companies for telecommunications from l'Usine Nouvelle
- Gold Decision 1989

Trilogy Corporation Ltd.

Established 1916
320 employees
Privately held

Supplier of turnkey business computer systems including applications software developed by Trilogy. Provision of hardware and software support.

Technology/Markets Information

Trilogy Corporation is a leading supplier of business systems throughout Australasia. Our mission is to provide technologically superior "mission critical" systems and services to our customers at competitive prices.

Trilogy has consistently achieved superior economic returns; return on shareholders funds has exceeded 50% over our last four financial years. We have negligible debt and a strong balance sheet.

Trilogy has developed world class application software products for a number of industry specific markets. Our major products are:

- Quota II* Stockbrokers system. Developed in Uniface, 4GL using the Deft Case tool. Will operate with any major database engine, although Sybase is the platform of choice. *Quota* includes full back office functionality, communications to the stock exchange and external databases. Focuses on front office business generation.
- Eunice* Inventory management systems. *Eunice* was developed in the Informix RDS environment. *Eunice's* advanced inventory management incorporates demand focus forecasting techniques and the latest inventory management strategies. *Eunice* also incorporates financials, sales, order entry, bill of materials, purchasing, and costing, to provide a complete solution for the wholesale/distribution industry.
- Leader* Construction industry system. *Leader* is written in the Sculptor 4GL. The *Leader* package is an integrated system for the building industry covering job costing, estimating, subcontractor, financials, inventory, and payroll.

Uniplex Ltd.

Founded in 1979
270 employees
Privately owned

Uniplex develops and markets Uniplex Business Software, the world-leading integrated office software for Unix.

Technology/Market Information

Uniplex is the world's leading supplier of office software for open systems. Uniplex business Software has been selected as the preferred office solution by most of the world's leading computer manufacturers, including AT&T, Bull, Data General, Digital, Hewlett-Packard, IBM, NCR, and Siemens-Nixdorf. Latest IDC market research figures show Uniplex holds the largest share of the worldwide market (37.3%) with the nearest competitor (CCI) holding a 16% share.

Uniplex II Plus provides the three core business applications: word processing, spreadsheet, and a choice of Uniplex's own database or transparent links to Informix or Oracle databases. All Uniplex applications share a common user interface and way of working and allow easy exchange of data. Through the provision of transparent database links, easy customization of screens, menus and links into many third-party applications, users are able to build systems that precisely fit their needs.

Advanced Graphics System (AGS) and Advanced Office System (AOS) are optional modules that add to the capabilities of the system. AGS adds sophisticated presentation graphics, while AOS provides features aimed at improving group work, including electronic mail and calendaring. Uniplex Windows allows users to interact with the system through a highly intuitive, graphical interface, thereby further increasing productivity.

Uniplex products are available in over 12 languages and on over 220 different machines, ranging from stand-alone PCs to mainframes supporting several hundred users. By providing continuity across an enormous range of different hardware systems, Uniplex software enables users to preserve their investment in data and expertise with current systems.

Industry/Product Awards

- First British company to be included in the Unix World Top 10 Software companies
- Winner of the Queen's Award for Export Achievement, 1990
- Included in the top ten of The Moneymakers 200 Fastest Growing Companies in the UK
