### ADVANCED VIDEO PRODUCTS

#### PIXEL ENGINEERING THE ULTIMATE PLUS 1MB TSENG LABS

- Supports up to 1024 x 768, 32000 colors
- Compatible w/ VGA, MDA, and HERCULES
- AutoSense for 8 or 16-bit slots
- Supports both inter. and non-interlaced modes
- Compatible with all monitors (56Hz-MS, 72 Hz also)
- FastBIOS for increased performance
- Turbomode for fast bus access (Zero wait state motherboard)
- Panning and Scrolling • Split-screen feature

**NEW F/X Model! \$289**

#### Hercules See ad on page 75 Superstation 3D

- i860 and TI34020 on board!
- Photorealistic rendering
- Up to 18MB Memory
- 33MIPS, 64 bit bus!
- 860 risc chip where you need it — graphics
- Full AutoCAD & 3D Support
- Video/Genlock

**Fully Loaded \$6495**  
**24 bit with 18MB**

#### SILICON GRAPHICS IRIS VISION See ad on page 74

- 3D Graphics and CAD
- 8 and 24 bit 1280 x 1024
- Render, Texture, Rotate
- A true workstation on a card for 386/486

**Fastest PC video available**  
**\$3999/8 bit \$5299/24 bit**

### CONSUMER OR COMMERCIAL?

#### Buy Commercial Quality

If you are purchasing computers on behalf of a business or institution, you should know that the difference between a consumer quality motherboard made in Mainland China and the world's best commercial quality American AMI motherboards is NOT MORE THAN 20%!

Since the peripherals cost the same in both cases, why gamble on compatibility and reliability disasters when the final invoice will be LESS THAN 10% more per unit? AMI's new EZ-Flex platform allows you to specify 100% American quality and upgrade only the processor card from 386-33 to 486 and beyond, as your power requirements build. Compatibility and reliability are locked in by using an AMI disk controller and an AMI BIOS. No more finger pointing. On board diagnostics available from Landmark allow Cardz to identify any problems by modem, saving you critical downtime.

People trust your expertise. Here is your chance with a known quantity — all AMI.

For more information on Cardz quality contact Len Kwok or Bob Shore, Cardz Corporate Sales.

#### A 386-20 VGA NOTEBOOK FOR \$2289?

Supports an external VGA color monitor and keyboard. Use as a portable, have two stations

- 6lb, 1MB-5MB
- 20MB Hard Drive
- 1.44 Floppy Drive
- 640 x 480, 16 gray scales

**Real Time  
Graphics  
On-Line**

#### CARDZ BBS

#### Graphics in Real Time

Using fractal technology Cardz is the first BBS to approach the real time display of color VGA images. Images can typically go from 850K. TGA files down to 5K-10K. Take a look on our board and judge for yourself. Look for the coming Online Store to combine the graphic and text on one screen, and eventually automatically feed you graphics from any menu!

As you have seen, Cardz now has 23 lines; no more waiting for BC's most popular BBS! And check out our new Sports Service with up to date wire feeds of every sport, including the CFL and NHL. (Graphics coming there too, in cooperation with a California BBS). The new 2.2 version of TBBS shall also be up shortly, with many colorful features.

**FILE SERVER** Multiterm MT386-25DX O.W.S., 4MB, 1.2MB Floppy, 80MB 19ms Harddisk, Monochrome Display, Enhanced Keyboard, 2 Parallel & 1 Serial Ports, Arcnet Card.

**CONFIGURATION:** Novell Network Operating System, File Servers under 10 users are installed as NON-DEDICATED file servers.

**WORK STATION** Multiterm MT286-12MHz O.W.S., 1MB (Max 4MB on board), Monochrome Display, Arcnet LAN card, 1 Parallel, Enhanced Keyboard, diskless, 20' cable

**CONFIGURATION:** MS DOS 4.01 and GW BASIC.

### ONE YEAR PARTS THREE YEARS LABOUR ON UNIX SYSTEMS

We also network your Novell, Xenix, Unix servers through TCP/IP so that the work-stations can access server(s) of their choice, or, transfer files between servers, or access all the servers at the same time to perform multi-tasking and hot-key to different sessions with i80386 power. The user can access Oracle database located in the UNIX server(s) from the Novell Workstation without leaving the DOS applications. The user can also cross access between XENIX and UNIX without logging out.

Prices subject to change without notice

### COROLLARY

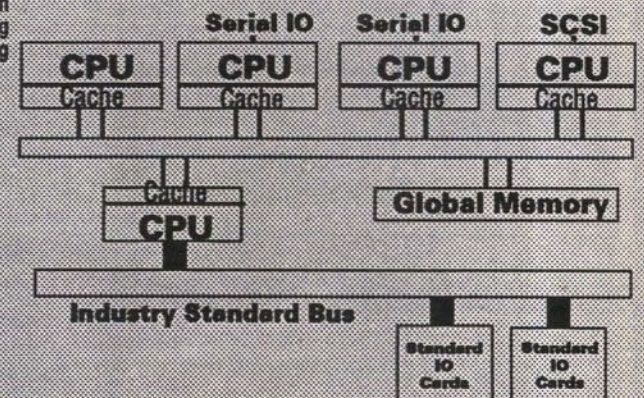

#### 486/smp

Symmetric, Compatible, Multiprocessor System

The world's first 486 symmetric multi-processor designed by Corollary, USA, supports up to 256 users. It grows with your business by just adding more processors. DPE Computers has integrated Corollary technology into the high performance MT-486MP. You can find out more about this exciting powerhouse by visiting us or calling 604-683-7587 (ext. 110).

#### MULTITERM MT486MP

- 1 to 10 I486
- 64MB ECC memory
- Up to 3.6GB internal hard disk
- Supports up to 256 users
- High performance I486 SCSI
- High performance I486 serial I/O
- 32bit C-Bus
- 256K cache memory for each CPU
- Plug in standard PC I/O cards
- Runs off-the-shelf XENIX/UNIX

## Teacher, leave those kids alone...

Our cover this month prompted an in-office joke about school being a place where they take bright lights and screw them up.

Computers are changing the learning process and to some, at least, bring into question the very necessity for schools. Just as computers have brought vast changes to corporations and created new options like telecommuting, home businesses and portable offices, the use of computers in education opens up the options of home schooling, using telecommunications in teaching, and brings new meaning to the concept of life-long learning.

CD-ROMs with their vast storage space and very rapid updating may put into question the viability of the old textbook route to learning. Educational software, with its endless patience and sophisticated graphics, can entertain as well as educate, and may well mean a shifting role for

teachers and the entire school system.

This month we review three Canadian-developed education packages, *All the Write Type* and *Crosscountry Canada* from Didatech and *SchoolWare* by Quality Learning Systems. These are a few new examples of "fun to learn" educational software. We also bring you an article from School Superintendent Stewart R. Ladyman that highlights what is desirable in good educational software from a teacher's perspective. George Slade offers us "A Tale of Two Dyslexics," a story about how technology was able to provide a solution for adults with learning disabilities.

## Life-long Learning

Life-long learning is a topic we tackle in articles on training. Bret Dobbin, a Winnipeg freelance writer, tells us that only the educated will survive. Ron McNutt, a recent graduate of the Infotech program at Capilano College in North Vancouver, gives us the saga of his career search after graduation.

## Other Stuff

Nelson Ruest takes a look at OmniPage, an optical character recognition package that runs under Windows. The program allows you to scan in text from magazines, books, letters, etc. OmniPage then "reads" the text and converts it from a graphic into an editable text file. Although the technology is still not 100% accurate, he recommends it for anyone with a scanner and modest requirements.

Nelson has recently relocated his desktop publishing training business to the Ottawa valley. We wish him well and hope to see the occasional article from him.

## Ace Moves East, Seeks Wild Life

Speaking of relocating, we learned this month that we are losing our ace desktop publisher and advertising production person, Carolyn Howse. She is moving to Toronto to pursue the wild life. Our loss, some lucky employer in Toronto's gain. We wish her only the best. We will be accepting resumés to fill the position for the end of October. If you are skilled at desktop publishing and are able to laugh appreciatively at your employer's occasionally dumb jokes, we may have a job for you.

Enjoy the issue.

Kirtan Singh Khalsa

## OS/2 For You?

I read Mr. Barr's interesting article on OS/2 in your August issue; it was most informative.

His message is plain enough; buy OS/2 instead of Windows 3.0 and the necessary supplementary programs and save money. Mr. Barr's advice makes a lot of sense for someone who is going to buy a new system when OS/2 is actually available. However, a lot of us have already installed Windows/DOS 5.0 on 386 class computers and purchased those supplementary programs.

My system works to my satisfaction; I use MS Word for Windows and Excel 3.0, together with a number of text-based programs. I do get the occasional lock-up, and it would be nice to have a more "solid" operating system, but I do not see the necessity to buy OS/2 in light of the investment I have already made.

Wasn't OS/2, having a 16 bit structure, primarily designed to work with 286 computers? Wouldn't (we)...be better off to wait for OS/3,

which will have a 32 bit structure and will be designed to make full use of the potential of the 386/486 computers? Do you think that the software companies are going to program for OS/2, or will they also wait for OS/3? What is the news on OS/3 nowadays?

There is always the question as to how long one should wait for major advances or...go with technology now, when, like me, one was faced with installing a system so as to be "open for business" on a given date.

I enjoy your paper very much; the material is fresh and useful. It is nice to read opinions from people other than John Dvorak, bless his heart, who seems to slip his little swiftly composed articles into everything from PC Magazine to the Vancouver Sun.

And bravo for a B.C.-based enterprise! I bought my system from a company whose advertisement caught my eye in your paper.

David P. Bellwood,  
Barrister & Solicitor, Vancouver

## LETTERS

## Kudos keep coming

Just a fax to say keep up the good work with *The Computer Paper*. I've... 'made a profound study of' the last three issues and find the whole effort excellent in every way: layout; articles (as in good writing); lots of latest product info; and great display ads.

In particular, I enjoyed the series by Mike (Beswick) entitled, "How to Buy a Computer—For Novices;" also Gordon's (Glaze) "Tips & Tricks" fax article will help others enjoy the convenience of the send-fax boards some of us have been using for a couple of years now.

A little aside for Gordon Glaze: Could you recommend a send/fax - cum modem, perhaps that could be used on the road with my Toshiba 1000 laptop? Something that just slips on the 9 pin comm-port, battery/AC operated would be perfect — if the price is around \$200! Any suggestions?

William J. Irvine  
Vancouver

We've found the MaxLite external portable fax/modem to be a good product. This tiny (3" x 4 1/4" x 1") unit is an AC- or battery-powered 2400-bps Hayes-compatible modem with error correction and data compression, plus a 9600-bps send and receive fax that works in the background. It is available in both PC and Mac configurations and even goes to sleep when not in use to conserve battery power. It's from Macronix, Inc., 408-453-8488. They are lining up local dealers.

## AppleWorks for the teacher

I was interested in your advice to reader Fred Houghton, who wanted to transfer his AppleWorks files to various MS-DOS formats. Unfortunately, he will not be able to implement your advice because AppleWorks does not allow you to save files in WKS or DBF formats.

Here is a better solution. A product called CrossWorks consists of a cable to connect an Apple II with an IBM-compatible computer and file transfer software for both machines. During the transfer, CrossWorks can change AppleWorks' word processing files into WordPerfect format and spreadsheet files into Lotus 1-2-3 format. CrossWorks also supports MS Works and is available for US\$99 from: SoftSpoken, Inc., P.O. Box 18343, Raleigh, NC 27619. Tel.: (919) 870-5694.

Gareth Jones  
Vancouver

## Apple talk

I too lived with and loved my Apple IIs over an eight-year period spanning a II plus, IIc and IIGS but found myself coerced into switching to MS-DOS thanks to Apple's negligence of us all. I am now the happier slave of a Zeos 386 DX laptop with a 42MB HD and Super VGA card. This is a fabulous machine...at only C\$2,900 (landed) and is the equal of any \$5,700 Toshiba laptop with similar options.

Regardless, like Mr. Houghton of Ladysmith, I found myself with approximately 2000 old ProDos files

that I wished to have access to via my new MS-DOS machine. I am writing because there is a much simpler solution... CrossWorks..The only drawback that I found was that I had to rename all my files to fit the more restrictive parameters dictated by MS-DOS..

Ross MacDonald  
Vancouver

Thanks guys, we knew somebody knew the answer.

## More Polish

In answer to Mr. Drozynski's letter (June 1991) you didn't mention 3 simple solutions:

1. MS-DOS 5.0 has code pages for all European languages, including Polish. With its improved editor, all that is required is a compatible printer which accepts downloadable characters. The printer has to be one of the following: IBM Proprinter II and III Model 4201, II and IIIXL Model 4202, Proprinter X24E Models 4207, 4208 or IBM Quietwriter III Model 5202 or compatibles.

2. WordPerfect 5.1 has all the characters for Polish in its character file. The keyboard layout can be changed in the Setup option (Shift-F1;5). Any printer with graphic capability will print out Polish characters.

3. Intex 1.2A is a Shareware wordprocessor for Polish (and many other languages). It requires a printer which accepts downloadable characters. They also offer a guide to multilingual spelling checkers, dictionaries, thesauri and desktop publishing in Polish. There is no translation software. Their address is: Intex Software Systems International Ltd., P.O. Box 3068, Stamford, CT 06905-0068, Tel. (203) 975-7412.

From my experience, the hardest thing is finding an adequate printer.

By the way, the June issue was the first I've ever read and I think it's great. You'll find enclosed a check for my subscription for 1 year.

R. Peter Urbanski  
Montreal-West

## BBS query

Enclosed is my subscription for next year....I actually work on Baffin Island. I have a Toshiba computer here with a modem. I have satellite access to North Bay Military Base and Inet... I belong to On Line Now out of Thunder Bay and used to belong to the old C.R.S. out of Toronto. I have been trying to find a Vancouver BBS that I can access from North Bay. Do you have any suggestions?

I look forward to getting your paper every month, to see what is happening in computers in general and in Vancouver in particular.

Robin Fry

## WHAT'S NEW

### What's New

#### Vancouver Business Computer Show

Industrial Trade and Consumer Shows (ITCS) is producing their first Vancouver show on September 18th & 19th at the Robson Square Conference Centre. The show, although expected to be smaller than the Pacific Rim Show in January, will include some big-name software companies under the Egghead banner. It seems Egghead is launching a direct sales office and warehouse in Richmond in September as well. Representatives are expected from Microsoft, WordPerfect, Borland, Symantec, Micrografx, Aldus and Central Point Software among others. ITCS also produces the Canadian Computer Show in Toronto in October as well as a show in Edmonton and one in Calgary. The show runs 10 a.m. to 6 p.m. For more information, contact ITCS in Vancouver at (604) 224-2207.

#### Softworld debuts in September

To acknowledge **SOFTWORLD's** international perspective, Michael Wilson, Minister of External Affairs, will be on hand to open the event on September 22nd. Delegations are expected from Japan, China, Taiwan, Hong Kong and Singapore. One of the events planned is a Trading Forum which will include a series of 7-minute presentations from developers. Potential investors are expected to witness over 150 presentations.

The goal of **SOFTWORLD** is to help establish Vancouver as the primary gateway between North America and the Asia Pacific. It will be held in Vancouver every two years. The conference costs \$590. For more information contact ann lévi-loyd (604) 682-2034.

#### PCCFA Announces Annual Fair and Swap Meet Date

**VANCOUVER, B.C., July 9, 1991**—The Pacific Coast Computer Fair Association announced today that the planning is well under way for their annual computer fair and swap meet. According to show organizers, it is the Lower Mainland's premier computer bargain-hunters' event and it will be held on Saturday, October 19, 1991, from 10 a.m. to 4 p.m. For the twelfth consecutive year, this event will be held at McPherson Centre, 7325 MacPherson Avenue, Burnaby, just a few blocks southeast of the Royal Oak Skytrain station. The admission price of \$3 (free for children under 10 and \$2 for seniors) includes a chance to win a door prize.

As in previous years, private individuals and commercial businesses will sell new and used computer equipment, software, books, and other computer-related items. Computer clubs representing most of the popular personal computers will also have displays of equipment and software, and

club members will be available to answer questions regarding their club's functions or their equipment and its software.

The PCCFA, a non-profit association of volunteers, is bringing back its popular speakers' program with two parallel streams of talks and workshops running on the upper floor of MacPherson Centre. Tentative speakers include representatives of Microsoft Canada, Apple Canada, Commodore Canada and Atari Canada.

The cost of tables for sellers will be \$35, if reserved before October 1, \$45 thereafter, and they can be reserved by calling (604) 420-3286 starting September 16th.

Further information can be found on **MIND LINK!** BBS, discussion group PCCFA.Fair. Hosted by Peter Hughes DATA: 576-1241, 685-1214, 856-3231. For non-members of **MIND LINK!** request a complementary membership of 5 hours to access this information. If you require help call **VOICE** 534-5663.

#### Born to Shop

According to a newsletter put out by Jack Cooke, organizer of the quarterly Computer Swap Meet, 87% of the shoppers who attended his last swap meet were male. His customer survey goes on to state that 63% of all sales happen within the first two hours and 28% in the last two hours. Another reason to get there early. (Jack used to be a political organizer, hence his penchant for demographics) The next Computer Swap-Meet is scheduled for September 21st at the McPherson Convention Centre, 7325 MacPherson Ave, Burnaby. For more information contact: (604) 531-0829.

#### Postscript Color Lasers Available at Service Bureaus

Both Laser's Edge and Wysiwig Graphics in Vancouver, and OCS Technologies in Richmond acquired Color Laser photocopiers recently. (For the record, Laser's Edge claims to have gotten theirs three days before the competition, justifying their claim to being the first in B.C.) You may have already seen color laser photocopiers in a number of locations. What makes these units unique is that they can be printed to from PC and Macintosh computers. The quality of the photocopies is superior to most 300 dots-per-inch (dpi) laser printers, producing 400 dpi output. The samples we have seen are very encouraging. At *The Computer Paper*, we are experimenting with using the output from these units for color keys at a considerable savings. Sample prices for quantity one, letter size \$14 and tabloid size \$20. Once you have one out of the machine, the duplicating cost goes way down, starting at about \$3.50/letter sized sheet and going down with volume. If you need impressive, low-volume color documents, and you are starting from a computer, check these units out. It will be a while before they show up in your own office however.

## WHAT'S NEW

The cost of the photocopier is around \$50,000 and the RIP box to talk to the computer is about \$20,000. Contact Laser's Edge at (604) 662-3774, Wysiwig at (604) 684-5466, OCS Technologies (604) 273-8045.

Pictured above are: (centre) Doug Koshima, President, Sharp Electronics of Canada, (left) Hideo (Henry) Idera, V.P. Information Systems and (right) Minitronics owner, Bud Li-Lam.

### Minitronics opens Sharp-only showroom

Minitronics Office Automation opened a Sharp Product Centre at 1948 Kingsway in Vancouver on August 8th. On hand for the opening was Doug Koshima, the newly appointed president of Sharp Electronics of Canada. Products shown included Sharp's color laptop, a 386 version of their popular notebook (the PC 6600) and a variety of their TFT (Thin Film Transistor) LCD projection panels for corporate desktop presentations. The color on both the laptop and the projection panels is very impressive. Sharp seems to be on the leading edge of LCD and display technology. According to their representatives, a good portion of LCD panels on other laptop computers originate with Sharp. For more information, contact: Minitronics 872-3225.

### Oops

Last month we mentioned that the Electronic Bookstore is offering printed versions of their books, previously only available online from Suzy. We got the telephone number wrong. The number for The Electronic Bookstore is (604) 874-0023.

### Mind Link! Startup Kit now available in Computer Stores

The Mind Link! Startup Kit can now be purchased at a number of Lower Mainland computer stores. Included in the Startup Kit is a 4-month membership, easy to follow Beginner's Guide, handy reference card, general information about the system including terminal configuration tips and the equivalent of 12 daytime hours of free time. Contact Mind Link! (Office: 534-5663) for the store nearest you or log on as a GUEST and see for yourself (BBS: 576-1214). You can also send messages, articles, letters to the editor, etc to *The Computer Paper* via Mind Link!. When you log on, simply type "Computer Paper" at the first prompt. This will take you into an area of the BBS dedicated to communicating with us.

### Slipped a Diskette?

Are you one of the 85% of the population with some kind of back pain? Too much time at the computer terminal? Did you know that most of that pain can be relieved through proper back care? The Burnaby YMCA is now offering the "Y's way to a Healthy Back" program to help you relieve your back pain. Some of the topics covered include good alignment, posture, mechanical back pain and relaxation. This program runs for six weeks, twice weekly starting September 17th.

Contact the Burnaby YMCA 294-9622 and register now. The fees are \$55 for 6 weeks.

### Purchase Ordering Software

NRN Software of Vancouver has announced the release of a new Purchase Ordering (PO) software package. According to the developer, PO, was written in Clipper and tested by local purchasing agents. It includes stock/inventory database, vendor database, previous pricing look-up, all tax and shipping costs, custom or built-in purchase order forms. This is the

second product in the NRN family. The first was a Facilities Energy Management package. Contact: Richmark Enterprises (604) 681-4309.

### RIP box Ripped Off

According to a recent report in *Business in Vancouver*, Bridgeport Graphics in Richmond was recently broken into. Thieves took a number of computers, a laser printer, every disc in sight and the \$40,000 raster image processor (RIP box) for their Linotronic machine. They apparently stopped short of hoisting the 700 -

# Q: Which business computer will Step-Up<sup>TM</sup> as your business needs step up?

## Answer: Q.

Q's Step-Up<sup>TM</sup> Modular Systems are here!

NOW, as your business grows, Q systems grow with you! Q modular systems offer a CPU, Math Co-processor and Hi-Speed Cache all mounted on a spectacular modular board. Q lets you *Step-Up<sup>TM</sup>* to the system model you want. For instance, start with a 386/25 and upgrade *easily* and *affordably* to a 386/33, 386/40, or even a 486 system with incredible speeds of up to 50 MHz and user memory of up to 64MB.

Experience the benefits of this new architecture brought to you by award-winning manufacturers at

The Q Line

Q Modular Slim 386/486	Q Modular Cache 386/486
Q486/33 Cache	Q486/25 Cache
Q386/33 Cache	Q386/25 Cache
Q386/33 Slim	Q386/sx Slim
Q286/12 Slim	Q386/sx Notebook

surprisingly affordable prices. With two motherboards, three case styles (including our popular *Slim* model!) and seven processor modules, Q gives you the choice of 21 upgradable systems! Decide on the amount of processing power you need today and with it, get the option to *Step-Up<sup>TM</sup>* to other Hi-Speed CPUs tomorrow. It's that easy! And just another way that Q continues to bring you the answers.

pound Linotronic. Fast work by the insurance company as well as Byte Computers, Linotype Canada, and the assistance of two competitors, Alphagraphics Printshops and Zenith Graphics, got Bridgeport back on their feet in record time.

While this story had a happy ending, it is indicative of a growing number of computer-related businesses that have been broken into in the last little while — not all of which are ending so happily.

Buyers are encouraged to beware of too-good-to-be-true prices from unknown sources.

**Software for Sports Card Fans**

INFOmation has recently announced SportFolio, software designed for sportscard collectors. It aims to solve a problem that all sportscards collectors face: organizing, counting, sorting, documenting and evaluating the collection. The program features twenty-one different reports, four different graphs and real-time updating. For more information, contact: INFOmation 572-8689.

**Mac-Based ESL Training Program makes the Big time**

Locally developed MacESL (English as a Second Language) and Open Format MacSL were recently listed in Chariot Software's Macintosh Educational Software Collection. MacESL was developed by Doug

Tomilson of University Colleges in Vancouver, to assist students in learning English. The programs are done in HyperCard. The program allows students to compare their own versions of words with Macrecorder digitized speech. According to the developers, the major advantage of using a computer for this type of training is that it is endlessly patient. The programs sell for \$87. Contact: University Colleges (604) 685-9380.

**Multi-Level Marketing Software**

CQ Research Corp of Vancouver, has announced an all-around office management software for the independent Multi-Level Distributor. The program is called The Mint, and it includes activity planning, contact management, inventory control, telemarketing, expense tracking, and point of sale modules. Contact CQ Research for more information: (604) 731-5583.

**Reseller Management Handbook**

Channel Strategies Inc, a Vancouver-based management consulting firm, has announced the second edition of their best-selling Reseller Management Handbook. The book is 120 pages long and provides action-oriented information on marketing and sales, financial management, financing, receivables management, staffing, reseller business models and performance measurement. The

contents were written with resellers in mind. The book is \$40 and an accompanying software package based on Excel (Mac and Windows) or Excel templates is also available for \$495. Contact Channel Strategies (604) 263-6811.

**Computer Cases and Power Supplies now available locally**

Winpac Systems, a subsidiary of Famous Computer Canada Inc, of Toronto, has opened a Richmond office and warehouse to service the Vancouver reseller market. Winpac sells the cases on many of the computers assembled in the local market as well as in Toronto. For more information contact: (604) 244-9501.

**Local Developer Elected to SPA Pen Computing SIG**

The Pen Computing Special Interest Group (SIG) of the Software Publishers Association (SPA) announced recently that Norm Francis, President and co-founder of PenMagic Software Inc., has been elected to its first Executive Board. PenMagic has also recently announced its intention to develop for the recently announced NCR 3125 Notepad pen-based computer. Pen-based computing promises to open computer use up to a new group of people who do not currently know how to type. Contact: PenMagic (604) 988-9982.

## "Apple Needs IBM" Says Apple Executive

SYDNEY, AUSTRALIA, JUL 29 (NB)—Apple's Pacific region vice president, Ian Diery, was in Sydney last week, and is reported in the Financial Review newspaper as saying IBM was crucial to the future of Apple.

When asked about the consequences should the Apple-IBM deal fail, he said "I don't like to think!" He said, however, that Apple wasn't the poor relation in the agreement, "because we've got the volume—we're selling more personal computers than IBM." He is reported as saying Apple was bringing valuable expertise to the marriage, including multimedia, education computing, and consumer-level technology. He said he expected the IBM ties to add at least \$1 billion per year to Apple sales, though it would be two or three years before product reached the marketplace.

Speaking about software for the new platform, he said, "We see Claris being a major player, though we won't give any undue preference." He also said he didn't expect Apple's relationship with Microsoft to cool following the announcement.

## Apple Upgrades Style/Laserwriter Printers

CUPERTINO, CALIFORNIA, AUG 9 (NB)—Apple has offered enhancements to two of its printers in the form of new software that provides background printing capabilities for the StyleWriter, and new printer software that reportedly doubles the performance of the LaserWriter LS.

According to the company, the software for the StyleWriter allows users to continue working while a document is being printed. Four new TrueType fonts have also been added to the printer: Chicago, Geneva, Monaco, and New York. These join the current set of TrueType fonts which are automatically installed in the user's system during the normal printer installation procedure, and include Times, Courier, Helvetica and Symbol.

GE Mail = NB.TOR

The new LaserWriter LS, in addition to getting its performance doubled, also licks out by getting approximately 30 percent more paper capacity, up to 70 sheets from 50.

For paper-hungry users and memo-fanatics, an optional 250-sheet paper tray continues to be available. The

LaserWriter LS also gets the four additional TrueType fonts.

Existing users of both printers can obtain the new printer software and TrueType fonts (new installation disks) at the same time through authorized Apple resellers, Apple user groups and online services.

## Outbound Intros New "Mac Notebook"

BOSTON, MASSACHUSETTS,

AUG 7 (NB)—Outbound Systems has unveiled a series of notebook-sized Mac-compatible computers. The new machines will replace the original Outbound Mac portable clone, which the company has been shipping for the past 18 months.

At the MacWorld show, Outbound System's booth was packed four deep as soon as the doors opened. Featured was the company's new line of notebook sized computers. All five machines in the line measure approximately 8.5 inches deep by 11 inches wide by 2

inches tall. All of them weigh about 6.25 pounds.

This makes them the lightest Mac-compatible portables on the market. Prices start at \$2,529 for the basic Motorola 68000-based machine with two megabytes (MB) of RAM, a super-drive compatible floppy disk, battery, and power adapter - to \$4,299 for the top of the line model which features a 68030 microprocessor, 4MB of RAM, the floppy drive, a 60MB hard disk, battery and power adapter.

Bob Louthan, President of Outbound Systems, introduced the new

machines in a press conference, stating that the Notebook series is "smaller, faster, lighter, and expandable."

As to the latter claim, he explained that all five machines in the line have standardized components and the process of upgrading is simply one of swapping the new components in for the old.

Louthan gave a demonstration in which he removed the CPU card, that also contains the RAM, and the hard disk as a way of showing the ease of upgrading the machines. Aside from these removable components, the

machines are powered by standard video camera type batteries which can be recharged in the computer or externally.

Projected operating life on a single battery charge is three hours. The machines provide all of the standard Macintosh connectors including a single SCSI (Small Computer System Interface) connector. It is possible to dock a Notebook to a regular Macintosh via the SCSI cable and then all of the Notebook devices become regular SCSI devices on the base Macintosh.

Outbound Systems has solved the

problem of providing a set of ROMs for their machines by signing an agreement with Apple Computer. Details of the agreement are being kept confidential, however, Louthan did describe the process.

When a customer purchases an Outbound Notebook, he also purchases a used Mac 512KE or SE. Outbound then repurchases the "shell" of the used Macintosh (i.e., everything but the ROMs) back from the customer and disposes of it. As a matter of fact, the customer never sees the used Macintosh that he purchased. If the customer has a used Macintosh, Outbound will sell the Notebook to him for \$200 less.

Louthan was asked about the availability of Macintosh ROMs in case of high demand for his product. He replied that there are well over three million Macintoshes that sport the particular ROMs that his machines need and that there should be no problem getting them.

The machine was demonstrated as System 7.0 compatible. Louthan stated that shipments to the dealer channels began over two weeks ago and that all 250-plus dealers should have received their machines by now. Most of Outbound's dealers are also Apple dealers.

### OEM Production Of Book-Type Macintosh To Sony

TOKYO, JAPAN, AUG 2 (NB)—Apple Computer will turn over to Sony production of a book-type Macintosh, says the Nikkei newspaper. According to the nation's most reliable economic paper, Sony will manufacture Apple Computer's next generation book-type Macintosh by the end of this year. A Sony spokesman has confirmed to various media organizations that it will make the notebook machine for Apple. Apple Computer, however, denies that any deal with Sony has been struck.

The relationship between Apple and Sony is already close. Currently, Sony is providing various Macintosh parts, such as floppy disk drives, for Apple Computer.

Apple Computer has already publicly discussed plans for a lightweight, notebook-style Macintosh. The Nikkei says the unit will weigh between 2 and 3 kg (four to seven pounds), and the list price will be 200,000 to 300,000 yen (around \$1,850).

Sony will produce the book-type Macintosh on an OEM (original equipment manufacturer) basis, and it will not sell the machine under the Sony brand name.

Sony has the technology as well as the production line for small computers, so analysts say it will be easy for Sony to adapt the line to the manufacture of a book-type Macintosh.

Apple Computer's Portable has been on the market since 1989, but its popularity is limited due to the weight (7.2kg) and the price (998,000 yen or \$7,400).

Sony also has advanced multimedia technology which observers suggest

## NEWSBYTES

Apple Computer might use in furthering multimedia development on the Macintosh, and specifically a notebook Mac.

Contact: Sony, +81-3-3448-2200.

### Claris Intros ClarisWorks Integrated Software

SANTA CLARA, CALIFORNIA, JUL 29 (NB)—Claris has introduced an integrated software package for Macintosh computers that will directly compete with Microsoft Works.

Like Microsoft Works, ClarisWorks features word processing, graphics, spreadsheet, charting, database management, and communications features.

Renee Risch, spokesperson for Claris, told Newsbytes that, unlike Microsoft Works, ClarisWorks lets users access tools and features from within a single document. Other existing integrated products force the user to move among different "modules."

A tool palette allows users to add text, graphics, calculations and charts to their documents at any time.

The company maintains that users can upgrade to the company's MacWrite Pro for word processing, MacDraw Pro for graphics, and FileMaker Pro for database management with relative ease.

ClarisWorks is scheduled to ship in the United States during the fourth quarter of 1991 at the suggested price of US \$299. Current owners of Claris AppleWorks, Appleworks GS, Microsoft Works, Symantec GreatWorks, and RagTime can upgrade to ClarisWorks for \$99.

Contact: Renee Risch, Claris Corp., 408-987-7534.

### Claris Ships Resolve Spreadsheet

SANTA CLARA, CALIFORNIA, AUG 6 (NB)—Following its recent release of the ClarisWorks integrated spreadsheet to compete directly with Microsoft Works, Claris has now announced shipments of its new Resolve spreadsheet for the Macintosh, designed to take market share from the popular Excel, and the edge out of the recently announced Lotus 1-2-3 for the Mac.

According to the company, Resolve features an intuitive user interface that combines ease of use and colorful graphics with powerful new spreadsheet functionality. The spreadsheet also offers advanced features, including a scripting language to enable sophisticated users to automate repetitive tasks, said the company.

As with all new Macintosh releases these days, the company says that Resolve takes full advantage of System 7.0.

Resolve is available now from authorized Claris dealers in the United States at a suggested retail price of \$399. The company is offering an upgrade policy where current U.S. owners of Microsoft Excel, Lotus 1-2-3, Informix Wingz, Ashton-Tate Full Impact and Bravo Technology MacCalc programs can purchase Resolve for \$99.

Contact: Steve Ruddock, Claris Corp., 408-987-7202.

## Flight Simulator 4.0 Debuts

REDMOND, WASHINGTON, AUG 6 (NB)—Microsoft has announced the release of Flight Simulator Version 4.0 for the Macintosh. The package brings to the Mac many of the enhancements seen in the latest editions for the IBM PC environment.

The latest release of the Mac flight simulation software will run in color or monochrome on all Mac models later than the Mac Plus. Desktop flyers will find three-dimensional graphics, whether using the color or monochrome version.

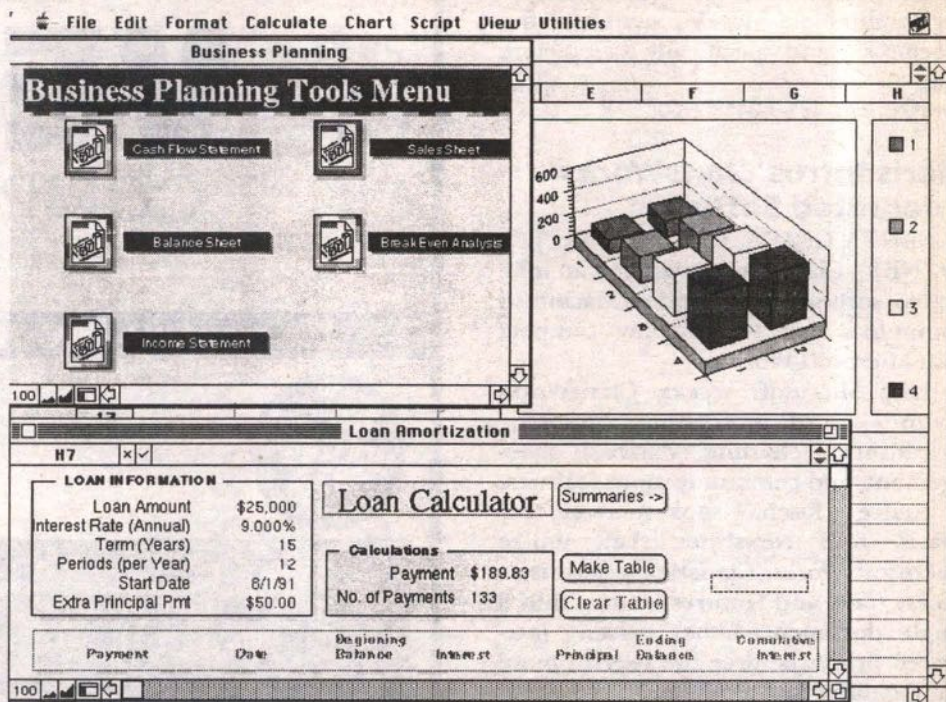

Microsoft now offers a fleet of aircraft including a Cessna 182, a Lear Jet, a Sopwith Camel, and a Schweizer 2-32 sailplane. You can even design and fly your own plane, using the experimental aircraft designer feature. If you design your own plane, you can modify the appearance and the aerodynamics of the aircraft and test them against the physical laws of flight.

When using the package, pilots will have multiple windows available to provide an on-screen map of the selected flight route, a cockpit view, a look from the tower, or a view from a spotter plane.

For neophyte pilots, on-screen flight instruction teaches everything from the basics to aerobatics, according to Microsoft. The new release is compatible with Apple's new operating system, System 7.0.

Contact: Sarah Charf, Microsoft, 206-882-8080.

## NEWSBYTES

## MacWorld Expo Report

BOSTON, MASSACHUSETTS, AUG 12 (NB)—The Boston version of the MacWorld Expo has always been noted as one of the highlights of the year for Macintosh fans. This year was no exception with hundreds of companies using this week as their preferred time to announce new products or upgrades.

In addition to the product introductions highlighted elsewhere in this issue,

several products were seen for the first time or technologies demonstrated for the first time to the avid Apple Mac users who came to the show. This article is a distillation of some of the more prominent of these.

## New Software

Claris has announced that it has begun to ship Resolve, its new spreadsheet program. Resolve is based on the Wingz kernel that Claris purchased several years ago that has been enhanced and improved and had the familiar Claris "look and feel" put on it. The

package is completely System 7.0 compatible and takes advantage of all of System 7.0's features. Resolve will retail for \$399 and Claris is offering current users of Excel, Wingz, Full Impact, and MacCalc the option of switching to Resolve for a fee of \$99.

Stingray Entertainment has begun shipments of its new arcade game for the Mac called "Frankie's Dungeon." This is a graphical action game that takes place in a big dungeon with lots of killer monsters and a single hero who must conquer all or die trying. Available immediately, Frankie's

Dungeon will retail for \$35.

### Software Upgrades

Insignia Solutions has announced a sweeping upgrade program and realignment of their line of MS-DOS software emulators. All three of the company's products—Entry Level SoftPC, Universal SoftPC, and SoftAT—have now been upgraded to Version 2.5. The new versions feature support for the Microsoft CD-ROM (compact disk, read only memory) extensions, Novell networking capability, more printer emulations, new user interface, System 7.0

compatibility, and a quicker installation procedure.

Apple Computer announced upgrades to two of its printer drivers. The Personal LaserWriter LS and the StyleWriter will now be shipped with a new version of the printer driver. These new drivers enhance the printer's speeds, allows for background printing, support larger paper tray capacities, and include four more TrueType fonts. Current users wishing to upgrade should be able to get the new versions from their dealers or user groups. Apple is not charging the dealers or user

groups for the new software.

SuperMac will begin shipping Version 2.7 of its backup software DiskFit in late August. DiskFit 2.7 incorporates all of the features of Network DiskFit which in turn is being discontinued by the company. Version 2.7 also brings an additional new benefit in complete support of Apple's System 7. Upgrades to current owners will be available for \$24.95 while Network DiskFit owners will be offered a kit containing 32 copies of DiskFit for \$15 per unit.

InLine Design has released 3 in Three, a non-violent logic game that is intended to be educational but still retail an element of fun. This game has been released previously under the CinemaWare label. Unfortunately, CinemaWare filed for bankruptcy prior to being able to distribute a large number of copies, leading Inline Design to pick up the distribution rights.

MapInfo demonstrated MapInfo for Macintosh 1.1. This new version, which is shipping now, incorporates increased performance for drawing and redrawing maps on the screen, Dynamic statistics functions, dot density maps, and the ability to locate an intersection by entering the names of the streets involved. The price of the package has been set at \$995 and an international version is due out soon.

Reference Software has announced that Grammatik Mac is compatible with Apple's System 7.0 and takes advantage of certain features of the new operating system. Features like Balloon help are being utilized to make it easier for users to make use of the capabilities of Grammatik Mac according to the company.

### Software Demos

Insignia Solutions was demonstrating their upcoming product SoftNode. SoftNode will allow Macintosh users running SoftPC access to Novell networks. SoftNode will be compatible with Novell ELS II Netware Version 2.15, Advanced Netware Version 2.15, 2.2 and Netware 386 in the Ethernet environment. All other software products that work within those environments will work with SoftNode. SoftNode is supposed to begin shipping in September and will retail for \$175 for a single-user and \$1,150 for a ten-machine license.

Broderbund was demonstrating a new line of animated stories on CD-ROM. Called the "living books" series, Broderbund announced plans to have at least four books released soon. These books contain an interactive environments with animations, sound tracks, special effects, and a hyper text like search facility to encourage children to explore the story and all of its ramifications.

Titles will include "Just Grandma and Me," "Arthur Teacher Troubles," "New Kid on the Block," and the Aesop fables starting with "The Tortoise and the Hare." The first in the series—"Just Grandma and Me"—is slated for shipment in January.

# THE TREND SETTERS

## LEGEND 486SX-20 & LEGEND2 NON-INTERLACED MONITOR

Pal Systems is proud to present the LEGEND 486SX-20MHz System and the LEGEND2 Non-interlaced 14" VGA monitor. These products mark the latest trend of personal computing. By offering superior performance at a reasonable price, this is a deal that you can afford but can't afford to miss.

#### LEGEND2 Non-Interlaced VGA Monitor

- \* Dot Pitch : 0.28mm
- \* Size : 14"
- \* Deflection Angle : 90 degree
- \* Face Treatment : Anti-glare
- \* Horizontal Frequency : 30-38 KHz
- \* Vertical Frequency : 45-50 KHz
- \* Vertical Frequency : 47-90 Hz
- \* Bandwidth : 65MHz (-3dB)
- \* Resolution : up to 1024 X 768 (Non-interlaced)

The Intel Inside Logo is a trademark of Intel Corporation

#### LEGEND 486SX-20MHz System

- \* Intel 80486SX-20MHz CPU
- \* 64K second-level cache, 256K optional
- \* 4MB (expandable to 32MB) on board
- \* 1.2MB & 1.44MB Floppy Drive
- \* Western Digital 85MB (17ms) Hard Drive
- \* 2 Serial, 1 Parallel and 1 Game Port
- \* 1MB Tseng Lab ET4000AX VGA Card
- \* Fujitsu high quality tactile keyboard
- \* Small Footprint Case
- \* 200Watts Power Supply
- \* 2 Year Warranty (Parts & Labour)

## MACWORLD REPORT

Lotus was demonstrating its upcoming spreadsheet, Lotus 1-2-3 for the Macintosh. This new spreadsheet is now in beta testing and is expected to begin shipping in the fall. Lotus 1-2-3 for Macintosh is a System 7.0 compatible product that has been designed from the ground up to be a Macintosh application while maintaining compatibility with Lotus 1-2-3 on other platforms. Included in the package will be Adobe's Type Manager with 13 TrueType fonts, and BackSolver, which is a single-variable mathematical equation solver.

Davidson was demonstrating its upcoming release of Earthquest Explores Ecology. This is a new software package that uses Earthquest's encyclopedia as a base for sixteen different interactive games. Six of the games are biosphere simulations that concentrate on demonstrating the inter-relationships between all of the biospheres on this earth. Particular attention is placed on the Amazonian rain forest. The program will begin shipping in September.

## More Software Upgrades

Broderbund was showing an upgrade to TypeStyler. TypeStyler 2.0 is System 7.0 savvy and offers complete support for TrueType. Additional enhancements include support for 24 bit color and better screen rendering time. TypeStyler 2.0 also features Letter Fusion, which allows a user to select a range of letters on which to apply the effects. In addition, TypeStyler will have Adobe Type Manager bundled in its package and a package of 13 typefaces will be included as well. TypeStyler 2.0 will begin shipping this fall.

Aldus introduced version 3 of Aldus SuperPaint. New features of the product include support for up to 32 bit color; new image enhancement capabilities; texture fills; and HotKeys. Upgrades will cost \$65 while new copies can be purchased for \$199. Availability is expected to be mid-September.

## MACWORLD REPORT

### Software Technology Demonstrations

Frame Technology and Acius were showing a method in which database data stored in 4th Dimension can be extracted and translated into a form that can be used by FrameMaker for publication.

The method, which ACIUS used to publish several of their directories, has always been present within 4th Dimension but has not really been used to date. Frame Technology and Acius chose to advertise its existence more broadly to encourage its use and to show its usefulness as a result of several customer requests. Both companies would be happy to show this method to all current users who have a need to understand it.

### New Hardware

QMS will begin shipping a pair of printers at the end of this month. The QMS 815 and 825 MR printers are the first desktop sized printers that feature a resolution of 600 by 600 dpi. The two models differ in the amount of paper trays that they support. The 815MR has a single paper tray while the 825MR supports two paper trays. Both printers are based on the print engines, support Postscript, and come with 45 built-in fonts. The MR in the model name stands for multi-res, which is a feature that allows the user to tailor the printing resolution from 600 by 600 down to 300 by 300 dots-per-inch (DPI).

Caere will begin shipping in

September a new hand-held scanner that is capable of working with both character and graphics data. Called "Typist Plus Graphics," the new scanner can perform optical character recognition (OCR) on the text parts of a scanned document while Caere's The Graphic Editor allows the user to manipulate any associated graphics that were also scanned in. Typist Plus Graphics is billed as the first hand-held scanner that can do both functions. Shipments to dealers are expected to begin in September.

Radius has begun shipments of its new line of filters designed to reduce the quantity of low frequency field emissions emanating from their monitors. The new Ergo:Shield line has been specifically designed to be custom fit to the Radius line of monitors of all sizes that are currently being shipped. All of the filters in the line can be installed on the monitor by the owner, there is no need for a technically trained person.

Mitsubishi has begun shipping its new high-res 37-inch color monitor that is compatible with the Macintosh and most PCs and compatibles. Intended primarily for demonstration purposes, the new monitor can display in resolutions of 640 by 480, 1152 by 882, and 1,280 by 1,024 dpi. One notable feature is its built-in video converter that takes care of NTSC, PAL, SECAM, Composite Video, and S-VHS signals very easily.

Xante announced the release of its new Accel-a-Writer IV. This is a printer controller that upgrades the performance of your Hewlett-Packard LaserJet

### INTRODUCING

**RAVEN'S  
"TAKING  
CARE OF  
BUSINESS"  
Special**

In business, it is important to get the most for your money. That's why Raven has exceptional prices on their entire family of laser printers this summer. From now until September 30th, you can get a complimentary copy of RavenScript (our Postscript™ emulation software — value \$200.00), when purchasing either our 8 page per minute or 11 page per minute laser printers. For a true Postscript™ laser printer, consider our 11 page per minute LP1170PS for use with your PC or Apple Macintosh™, value priced at the equivalent cost of competing 6 page per minute printers. Let Raven take care of your business this summer. Visit your local Raven dealer today.

## MACWORLD REPORT

Series II laser printers. The upgrade allows the printer to increase its resolution to 600 by 600 dpi while allowing for simultaneous printing from more than one source (serial Appletalk, and centronics). There is also an advanced memory management feature that allows one page to be composed while the previous page is being printed. The board comes with six megabytes of memory and includes 35 PostScript fonts.

### Aldus Debuts SuperPaint 3.0

BOSTON, MASSACHUSETTS, AUG 9 (NB)—Aldus Corporation introduced what it describes as a major new release of Aldus SuperPaint at MacWorld in Boston this week.

SuperPaint 3.0 is an integrated painting, drawing, and image enhancement program for the Macintosh computer. New features include support for 1, 8, 16, and 32-bit documents, and includes both monochrome and color support. "Customers working with 8-bit systems, for example, will be able to have quick access to nearly 16.8 million colors without requiring a 24-bit board," said Cindy Taylor, SuperPaint product manager.

The image enhancement feature of SuperPaint is a new addition. Features include brightness, contrast, color balance, masking, smudge diffuse, lighten, darken, and invert.

Another new feature is texture fills. Several fill patterns are provided, and others can be created by the user and then applied in paint or draw. EPS textures can be used from another program, such as Aldus FreeHand, and used within SuperPaint.

Gradients have also been added. Gradients are gradual transitions from one color to another. They can be created in paint or draw, and up to 256 colors can be used in a single gradient. PostScript language gradients can be created in the draw mode.

Also new is hot keys, allowing the user to more easily access tools and palettes. Taylor said the simplified interface makes the program easier to learn and use.

SuperPaint will be available in the third quarter of this year at a suggested retail price of \$199. Registered owners will receive upgrade information in the mail. Upgrades cost \$65 plus shipping and tax. More information about upgrades can be had by calling 619-695-6956.

A Macintosh plus, Classic, SE, Portable, SE/30, LC or II series, with 2MB of RAM, System 6.0.5 or later, a hard disk and one 800K drive is required for black-and-white use. For color, you'll need a Macintosh SE/30, LC or II series, 2MB of RAM, 32-bit QuickDraw, System 6.0.5 or later, a hard drive and one 800K floppy drive.

Contact: Joanne Rush, Silicon Beach Software, 619-695-6956.

### Sony Demos Multimedia

BOSTON, MASSACHUSETTS, AUG 7 (NB)—The Computer Peripherals Division of Sony Corporation of America has demonstrated several new multimedia products at MacWorld.

The Sony VDECK Hi8 video drive is being billed as the first 8mm VCR that was directly designed to be a computer peripheral. The Sony multi disc player is being billed as the first peripheral product that can play different types of media from audio CD through video laserdiscs in one box.

The Sony VDECK Hi8 allows you to control the playing of 8mm tapes from your computer, the company claims. While Sony was demonstrating only Macintosh control at this show, Sony representatives mentioned that the PC products are not far behind. Sized in a box that is the same as Apple's CD player, the Sony product is controlled via a serial protocol labeled VISCA (Video System Control Architecture). About 70 developers have announced their intentions to develop products that use VISCA.

The multi disc player model MDP-1100 is a product that allows you to control the playing of laserdisk and other media types from your computer. The MDP-1100 has a unique tray that allows you to place media from audio CD's through video laserdiscs on it. The computer controls the MDP via a serial link.

## Tired of Computer Clowns?

Any clown can sell you a computer. But at Westcoast Computers, you get more than just a "guaranteed lowest price".

You get a Customer Support Policy that is the envy of the industry. With free delivery. Free installation. Free pre-delivery system checkout. And free technical support. For as long as you need it.

We even provide our exclusive no-nonsense **Loaner Warranty**, which gives you an instant loaner computer if your machine does require repair, regardless of the brand you choose.

Our experienced professionals will patiently help you choose the right computer products from the right computer companies. Like IBM, Panasonic, Samsung, ALR, Wyse, and many more. Without the razzle-dazzle and without the high pressure.

Because we still believe in helping you find the best system for your requirements, instead of just making a quick sale. And that's the difference between us – and the clowns.

## NEWSBYTES

There is still the need for a separate video card if there is a desire for any editing features.

Both products were demonstrated at the show and are not yet available for sale. Sony expects to begin shipping the MDP-1100 by the end of this month while the VDECK may be shipping by the end of 1991. Pricing on the MDP-1100 is \$795 while it has yet to be established on the VDECK.

Both products are to be used in interactive training and educational applications, according to the company. One of the interesting features that the MDP-1100 supports is its bar code control wand. With this wand and a sheet of printed bar codes, a person can control the machine and therefore the flow of the presentation.

### Mobius Display Boosts Classic To Ilci Speed

EMERYVILLE, CALIFORNIA, AUG 12 (NB)—The new "030" display system from Mobius Technologies increases the performance of the Apple Macintosh Classic by up to six times, and gives it the operating speed of a Mac IIci, claims the company.

The display gives the Mac Classic a large screen and 25 MHz speed for the suggested price of \$1,145. A two-page system is set to list for \$1,345. Both will be available by September 1991.

"Classic owners will have the speed and display area that are necessary to run System 7.0's features productively,"

said Kamran Mohsenin, president of Mobius.

The company said that it will also offer virtual memory for either the SE or the Classic. System 7.0 does not support virtual memory on the low-end Macs. But if Connectix Corporation's Virtual 3.0 software is used, the Mobius-accelerated Mac can access up to 16 megabytes of application memory, four times the memory normally associated with the SE and Classic, said the company.

Mobius is including Connectix's Virtual 3.0 through December 1, 1991, with its \$295 PMMU option (as an upgrade for the basic 68030 Display System, which does not include that processor) and its complete "PV" 030 display systems (which include the PMMU).

A one-page 030 Display for the Classic with virtual memory is available for \$1,295 direct from Mobius. The \$199 Connectix software is available at no extra cost to the customer. Previous customers who purchased the PMMU option can upgrade to Virtual 3.0 for \$50.

Both the Mobius large external display and the Mac's built-in monitor can be used at the same time using the company's dual-screen software. Mobius' monochrome displays meet Swedish standards for low emissions.

Both monitors offer a 75 Hz refresh rate, and the one-page display has a 78 dots-per-inch (dpi) resolution, while the two-page display offers 75 dpi.

## New Version Of Great Plains

BOSTON, MASSACHUSETTS, AUG 7 (NB)—Great Plains Software announced the release of a new version—Release 6—of its integrated accounting software of the same name. The software company has also announced several new add-in modules for the package.

According to the company, the new version of Great Plains Software has more than 100 new features, and comes in 12 modules for ease of use by the business customer.

New additions to the Great Plains Software line include a system manager with executive advisor which adds graphics capabilities, printing capabilities, menu customization, and a macro keystroke recorder. Expanded capabilities of the general ledger module include improved report generation, unlimited budgeting history, and automatic transaction allocation.

Great Plains has also announced the upcoming availability of its newest module, a report writer. This software was developed for Great Plains Software by a Florida company, Snow Software.

According to company officials, the extra module adds the capability of going directly into the heart of the database that resides within the package. It will then be possible to generate any custom report that the user might desire.

The report writer module will be

available by mid-September. Pricing for the new module is \$795 for a single-user license while the multiuser and client/server versions will sell for \$995.

The new version of Great Plains Software supports the Apple Mac's System 7.0 operating system software at the compatibility level. Balloon help and Adobe's true type features are not yet supported, but the company indicated that future releases will accommodate them as well. One additional increase in capability is the increased speed of the system with some users reporting as much as a 150 percent improvement in their productivity.

Current users can upgrade to the new version of software for about \$65 per module. Contact the company directly for exact pricing as it varies based on the exact service contract that exists.

Contact: Terry Kalil, Great Plains Software, 701-281-3130.

## Caere Intros OmniPage 3.0 and Typist Scanner

LOS GATOS, CALIFORNIA, AUG 7 (NB)—Caere Corporation has introduced version 3.0 of its OmniPage page recognition software, and at the same time announced the Typist Plus Graphics hand-held scanner for the Macintosh platform.

A Microsoft Windows 3.0 version of Typist for the DOS environment has been available since March of 1991, and Typist 1.1 for the Macintosh was released in June.

## APPLE

According to the company, OmniPage 3.0 is compatible with Apple's new Macintosh System 7 operating system and includes built-in spellchecking and draft-dot-matrix type-recognition programs. The new version also includes expanded support for scanners.

OmniSpell, an interactive spelling checker that was previously available only as an add-on product, is now built into OmniPage. According to Caere, the software is specially designed to detect and correct errors that can occur during the recognition process.

OmniPage 3.0 also includes OmniDraft, which was also previously only available as an add-on product. The software allows for the recognition of text printed in draft mode on nine-pin dot-matrix printers.

The Apple Mac's System 7.0 "publish and subscribe" feature is also supported, allowing for enhanced storage and retrieval capabilities, said the company.

Caere maintains that OmniPage 3.0 can recognize nearly all nonstylized fonts, in sizes ranging from six points to 72 points, at speeds of up to 115 characters-per-second, depending on CPU (central processor unit) speed. The software can also read 11 European languages, and automatically separate graphics from text and numbers.

The Typist Plus Graphics is a hand-held Macintosh-compatible scanner that combines optical character recognition (OCR) technology with image scanning and editing software.

According to the company, it is the only hand-held scanner that includes the ability to edit both text and gray-scale images. In addition to OCR functions, Typist Plus Graphics also includes image editing software called the Graphic Editor which creates black-and-white line art or continuous-tone images with up to 256 shades of gray.

Typist Plus Graphics requires an Apple Mac Classic or above, 4MB of RAM and a hard-disk drive. It will operate under System 6.0 and above, including System 7.0.

OmniPage 3.0 will run on any

Motorola 68020- or 68030-based Mac with at least 4MB of RAM, a hard disk with at least 4MB of available space, and a compatible 300-dots-per-inch scanner. System 6.0 or above is required.

Available immediately, the suggested retail price of OmniPage 3.0 is \$695. Typist Plus Graphics has a suggested retail price of \$695 and will be available in September.

The company is running an upgrade promotion for registered owners of the Typist and Typist 1.1 for the Mac whereby they can receive a software upgrade to Typist Plus Graphics for \$75.

Contact: Larry Miller, Caere Corp, 408-395-7000.

## Toronto Firm Puts Children's Books In Multimedia Form

TORONTO, ONTARIO, AUG 12 (NB)—Discis Knowledge Research is offering a series of children's books in the form of multi-media software for the Apple Macintosh. The three-year-old company uses multimedia to add features such as speech, music, and sound effects.

The metaphor of a book is preserved on the computer screen, said Richard Wah Kan, vice-president of market development. Each screen looks like a page.

To turn the page, the user clicks with the mouse on the corner. The Mac's built-in audio capabilities provide a reading of the text while it is displayed on the screen, with music and sound effects added.

Another feature is the ability to click on a word and hear it pronounced, and see a definition. Similar explanations are available for pictures. Discis currently has 11 of the multimedia books available, at prices from US\$75 to US\$90. But future possibilities go beyond children's books.

"What we have developed here is a technology for putting a printed book on a screen," Wah Kan said. "It just so happens we started out with kids' books."

Rana Mainee, a consultant with Waltham, Massachusetts-based research firm Inteco Corporation, said training

## ATARI

### Andest Designs Pocket Modem For Atari Portfolio

MILTON KEYNES, ENGLAND, JUL 30 (NB)—Andest Communications has designed and manufactured a pocket modem for the Atari Portfolio palmtop PC.

The modem, which supports 300 and 1200 bits-per-second (bps), is being bundled with the Atari Portfolio PC for UKP 399.95.

According to Andest, the pocket modem was specifically designed for the Portfolio, drawing power from the Portfolio's battery pack—this saves on weight, as the modem does not require a battery, the company claims.

Bundled with the hardware is a copy of Andest's telecommunications package for the Portfolio, which supports VT52, VT100 and teletype terminal emulations, as well as Kermit, X-Modem and ASCII file transfers.

"By working closely with a portable computer supplier such as DIP, we can develop a modem to its exact specifications, which can help to retain the portable nature of the product," explained Tony Sellers, Andest's founder and managing director.

DIP, the developers of the Atari

## ATARI

Portfolio, is pleased with the pocket modem. Commenting on the modem, Peter Baldwin, DIP's co-founder, said: "The ultimate challenge in portable computing is to provide the travelling businessman with the capabilities of his office counterpart, while retaining a portable product."

"The development of the Pocket modem means we can offer travelling businessmen immediate access to office-based computer records and provide a portable E-mail system with a product weighing less than two pounds for under UKP 400," he added.

Contact: Andest Communications, Tel: 0908-263300.

## CANADIAN NEWS

### Vancouver Exchange Sells System To Mexico

VANCOUVER, BC, AUG 14 (NB)—The Vancouver Stock Exchange (VSE) has announced the sale of its computerized stock trading system to the Mexican Stock Exchange. The deal follows closely in the wake of the VSE's first sale to the Venezuelan exchange in April.

The Vancouver Stock Exchange, Canada's third-largest, expects to make about C\$750,000 on the sale. The exchange will be involved in follow-up consulting on implementation and training.

The system, developed by the Vancouver exchange and New York software developer TCAM Systems to run on IBM hardware, has been running in Vancouver since May of last year.

### CANADIAN NEWS

Spokesman David Laundry said that the exchange has bid for sales to other exchanges as well.

Like the Venezuelan sale, the Mexican deal involves the VSE, TCAM, and IBM. These parties and the Mexican Stock Exchange were scheduled to sign agreements August 13 covering hardware and software sales as well as telecommunications and consulting contracts.

Contact: David Laundry, Vancouver Stock Exchange, 604-689-3334, fax 604-688-6051.

### Joint Venture Tackles Systems Management in B.C.

VANCOUVER, B.C., AUG 13 (NB)—The B.C. Tel Group, parent of British Columbia Telephone, has announced plans to form a joint venture with Canada's largest computer service bureau to provide systems management services in British Columbia.

The deal is an agreement in principle so far, as B.C. Tel is still negotiating details of the deal with Regina, Saskatchewan-based Westbridge Computer Corporation. Plans call for IBM Canada to provide marketing services to the new company.

IBM Canada has a 27 percent stake in Westbridge, acquired in March in a deal that saw Westbridge take over STM Systems Corporation, the service-bureau subsidiary of Markham, Ontario-based International Semi-Tech Microelectronics, to become Canada's largest service bureau. International Semi-Tech and Westbridge's former parent company, Saskatchewan Telephone, also hold 27 percent each.

The new company will begin operations in the fourth quarter of this year, B.C. Tel officials said. Further details are to be released once formal agreements are signed, which Kirkbride said is likely to happen by the end of August.

Contact: Maureen Kirkbride, B.C. Tel, 604-432-2661, fax 604-433-1241; Peter Ross, Westbridge, 416-542-5240; Stan Didzbalis, IBM Canada, 416-474-3036.

### Bull To Market Municipal Accounting

MARKHAM, ONTARIO, JUL 19 (NB)—Bull HN Information Systems will market Concord Municipal Accounting and Information System (MAIS) software across Canada. The software comes from Concord Consultants of Richmond, British Columbia.

Concord, an eight-year-old computer software company, develops and sells software to municipal governments in British Columbia. Under a joint marketing agreement, Bull will sell the MAIS software to Canadian municipalities, a spokeswoman said.

The Unix-based MAIS software runs on Bull's DPX2 series systems. Bull officials said it is the country's largest supplier of hardware and software to municipal governments.

Contact: Betty de Sousa, The Communications Group for Bull, 416-696-9900, fax 416-696-9897; Patti Knight, Bull HN Information Systems, 416-499-2855.

### COMMODORE

### Commodore Earnings Soar

NEW YORK, NEW YORK, AUG 14 (NB)—Bucking the recent computer industry trend to gloomy financial results, Commodore International has reported a more than 30-fold increase in net income for fiscal 1991. Commodore earned net income before extraordinary items of US\$57.4 million in the year ended June 30, up from US\$1.5 million last year.

An extraordinary charge of US\$9.2 million having to do with settlement of a court case brought the final 1991 net income figure down to US\$48.2 million. Commodore's annual sales rose 18 percent, from US\$887.3 million to US\$1.047.2 million.

Announcing the results, Irving Gould, Commodore's chairman and chief executive, said the results reflect the company's strength in Europe, which accounted for more than 85 percent of the company's total sales.

Commodore said sales of all its products grew in the fourth quarter of fiscal 1991. Sales of the IBM-compatible line of PCs rose 35 percent, sales of the venerable Commodore 64 increased 30 percent and those of the Amiga line grew by 20 percent, the company said.

Contact: Tom Shepherd, Commodore Canada, 416-499-4292, fax 416-494-9755.

### World Of Commodore Show Breaks Records

SYDNEY, AUSTRALIA, JUL 22 (NB)—The World Of Commodore/Amiga exhibition held in Sydney last weekend attracted a record 29,642 paying customers. By contrast, the last New York World of Commodore/Amiga only had 19,000 visitors.

"The public response was simply unbelievable," said Commodore Australia Manager Pat Byrne. He claimed CDTV—Commodore's interactive, CD-based multimedia system—was one of the main factors. "But it wasn't the only star—there were displays of the latest computer applications, and every seminar was heavily over-attended."

As well as many local, Australian vendors, there were overseas exhibitors, some with brand-new product to test on the marketplace. Most software vendors had a number of CD-based applications for the CDTV system. These ranged from new versions of old games, right up to full encyclopedias complete with moving video and stereo sound. Look up Kookaburra in the bird section of the encyclopedia, see it fly and hear its call.

The shows are organized around the world by The Hunter Group of Canada. Contact: The Others ph +61-2-9065088 fax +61-2-9064893.

### GENERAL

### Birthplace Of IC Becomes Protected Site

PALO ALTO, CALIFORNIA, AUG 9 (NB)—Who says California has no history? It just so happens that the birthplace of the first commercial integrated circuit has been designated a "registered historical landmark," by the Office of Historical Preservation for the

## NEWSBYTES

State of California.

The site now joins the garage in which Bill Hewlett and David Packard began their famous company as the second such landmark. The registered landmark designation is the 1000th for the state and the second for Silicon Valley.

The designation recognizes the significance of the integrated circuit developed in 1959 by the late Dr. Robert N. Noyce at Fairchild Semiconductor.

In developing the integrated circuit, Noyce used a method of linking the different components of an electronic circuit together by evaporating a conductive aluminum layer over "windows" in the silicon oxide, instead of interconnecting the elements with wires. The "metal-over-oxide" process allowed the integrated circuit to be built efficiently in large volume which in turn made ICs and their descendants affordable to the throngs.

The placement of the plaque honoring Noyce's integrated circuit will be at 844 East Charleston Road in Palo Alto, where Fairchild Semiconductor began its operations in 1957.

Contact: Howard High, Intel Corp., 408-765-1488.

### Philippe Kahn Speaks On Lotus Suit, AT/Fox Suit

PASADENA, CALIFORNIA, JUL 23 (NB)—Borland's President Philippe Kahn has expressed his views on the litigation issues between Borland and Lotus and between Ashton-Tate (the company Borland is in the process of

purchasing) and Fox Software, before a crowd of several thousand at a special meeting of the Pasadena IBM Users Group at the Pasadena Hilton.

Kahn's view is that the two cases are tied together quite closely. He said that in both suits the perpetrators, Lotus and Ashton-Tate, respectively, were trying to copyright not a new invention but a hierarchical command structure determined by functionality.

He added that, in both cases the companies should have sought patents, but instead are trying to get exclusive rights to something that in his opinion should not be copyrightable, no more than the placement of the order of the gas and brake pedals in an automobile should be copyrightable so no one else can use it.

Kahn said that, if this litigation succeeds, it could not only change the computer industry, but the entire consumer market could change. Suddenly, an airplane manufacturer could say it has a copyright on the placement of the functional controls in an aircraft, and other manufacturers would have to make aircraft with different controls. Computer chips could be copyrightable because of the functional order in which commands are executed. VCRs, microwave ovens, televisions, all have a hierarchy of commands based on functionality, and could then conceivably be copyrightable so each manufacturer would have to make different controls, and consumers would have to relearn each manufacturers set of controls, Kahn explained.

The conclusion, in Kahn's opinion, is that not only should a hierarchy of commands based on functionality not be copyrightable, but it could be disastrous if they became copyrightable. Kahn said that, in the Lotus suit against Borland, Borland is using a hierarchical set of commands from a Lotus menu based on functionality.

Kahn added that Borland would be willing to pay Lotus a royalty, but Lotus wants to say it owns those commands and no one else can use them. "We could easily just remove that part of the program from the Quattro Pro prod-

uct, and most of our users would not miss it. But it's the principle of the thing to us now," he said.

When asked about Borland's intentions on the Ashton-Tate suit against Fox Software, Kahn made a joke about lawyers, then said Borland is not a litigious company and he was sure something could be worked out with Fox, if the suit hadn't been already settled by the time Borland's purchase of Ashton-Tate was finalized.

Contact: Philippe Kahn, Borland, Tel: 408/438-5300, Fax: 408/439-9273.

## Who Invented the Microchip?

## Industry Watching Fujitsu Challenge Of Kilby Patent

WASHINGTON, D.C., JUL 23 (NB)—Fujitsu's gamble that Texas Instruments will not be able to force it to pay royalties for the so-called "Kilby" patent has high stakes that could affect the entire chipmaking industry.

The "Kilby Patent"—more formally known as the "Semiconductor Device" Japanese Patent No. 320,275—was awarded on October 30, 1989 and expires on November 27, 2001.

This question of just who invented the microprocessor, especially the single chip microcomputer, is quite complex and could be worth many millions of dollars to the eventual winner.

Back in 1958 Texas Instruments' Jack St. Clair Kilby invented the first integrated circuit, an MOS or metal oxide semiconductor, and nine years later Kilby, Merryman, and Van Tassel at TI produced the industry-changing pocket calculator based on that technology.

Much of the early work on this sort of microprocessor technology took place at Texas Instruments, but a recent challenger caused a worldwide stir last year when he was awarded a seemingly very basic patent on the single chip microcomputer.

Gilbert P. Hyatt's very widely publicized patent on the microprocessor may now be in doubt because it appears that his work may not predate that of TI's Gary W. Boone in 1970.

Boone was one of the team who worked on shrinking the electronics which go into the pocket calculator, and TI credits him with the concept of putting all the separate elements that make up a computer on a single silicon chip.

To complicate things even further, Intel's founder, Robert Noyce, made extensive notes on a microchip concept back in January of 1959, but Kilby built a germanium-based chip only a month later, with Intel's silicon-based microchip coming that summer. Noyce and Kilby share recognition as co-inventors of the microchip.

Kilby's first IC was actually a phase-shift oscillator developed as part of research being done for the Signal Corps (Pentagon).

Contact: Terri West, Texas Instruments, 214-995-3481.

## Where Do Power Problems Come From?

NECAHAH, WISCONSIN, AUG 1 (NB)—The National Power Laboratory, a division of Best Power Technology, is conducting a five-year study of the origins and effects of power line problems on computers and some results are surprising. Utilities, sunspots, and lightning are commonly blamed, but NPL's recent study shows that many problems occur within the user's facility.

Using dual Dranetz monitors at both residential and commercial sites, both entry point and use point measures of power disturbances are made, and comparisons of the two readings help pinpoint the origin of problems.

A recent three-month study showed

32 power disturbances at the points of entry, and 130 at the end-user sites. Point of entry is where power is supplied by the electric utility and user sites are where the computers are located, so fewer than 25 percent of the disturbances recorded were due to line problems outside those created within the buildings.

Of four undervoltage incidents, all were created inside the buildings. Almost exactly half the voltage sags were created inside the building, the others being due to external line conditions, while 69 of 74 voltage impulses were

caused by something inside the user's building.

Sags and undervoltages cause both system crashes and physical damage, just as do overvoltages and surges.

The National Power Laboratory is conducting a five-year study of power conditions and is attempting to set industry standards for the UPS or uninterruptible power supply industry.

Best Power Technology, P.O. Box 280, Necadah, WI 54646 (800-356-5794) designs, manufactures, and builds a sophisticated line of intelligent UPS devices to protect small or large com-

puter installations.

Contact: Ed Coudal, Best, 813-966-1888 or fax 608-565-2929.

### Digital To Buy Philips — Subject To EC Agreement

EINDHOVEN, THE NETHERLANDS, JUL 24 (NB)—Subject to final approval by both companies' respective shareholders and the European Commission's monopolies and mergers team, Digital Equipment Corporation will take over the troubled N.V. Philips group.

Although final details of the deal

have yet to be agreed on by both companies, DEC has agreed in principle to purchase several of the leading edge technology divisions of Philips. DEC officials are said to be particularly interested in the financial services division of Philips, which supplies computerised equipment to banks and other financial institutions throughout Europe.

Financial details of the take-over bid have not been announced. Sources close to Philips suggest that the final price to be paid has not been fixed and will be dependent on sales figures currently being compiled by both companies' auditors. According to one Philips source, the divisions of the company in which DEC is interested have a combined turnover of around \$1,200 million.

### Aldus Tech Support Bulletin Board

BOSTON, MASSACHUSETTS, AUG 9 (NB)—Aldus Corporation, developer of PageMaker and other graphics programs, announced at MacWorld in Boston that it will offer registered users of several of its programs 24-hour technical support via an interactive bulletin board system.

Dubbed CustomerFirst Online (CFO), the service will offer support from product specialists, downloadable trouble-shooting tips, quick-reference guides, layout templates, macros, desk accessories, clip art, and other productivity and design aids. CFO is available to registered owners of Aldus FreeHand, PageMaker, Persuasion and PrePrint.

CFO is a subscriber service, and allows subscribers access to the Aldus Online Database, Online conferencing forums and public forums on CompuServe. Online Database is the resource used by Aldus technical support experts, and supports keyword searches. Subscribers can also request product information, register Aldus products, subscribe to "Aldus Magazine," and find out how to become an Aldus Trainer.

John Archdeacon, Aldus director of customer service, said, "Aldus is breaking new ground in the software industry by offering an electronic bulletin board designed for all users of Aldus products." Archdeacon said Online will be continually supplemented in order to give subscribers access to the most current information.

Subscribers will access Online through the CompuServe network using the Aldus Information Manager, a derivative of CompuServe's Information Manager. AIM uses pull-down menus, dialog boxes, movable windows, buttons, and a mouse. Aldus says AIM is available for both Apple Macintosh and DOS-based systems.

Subscriptions to Online can be purchased individually or acquired automatically as a part of the purchase of a CustomerFirstPremierOnline or Corporate Library service plan. With each plan, users get access to CompuServe public forums, and are credited with 12 hours of connect time

## DARIUS PROFESSIONAL™

## EVERYTHING YOU BUY A NOTEBOOK FOR

### FOR THE POWER

- 386SX-20 - The power and performance of a desktop
- 1MB to 5MB memory - Enough to handle the largest programs
- 20MB to 60MB hard drives - Ample storage capacity
- Fast Video Ram - As fast as a desktop when using Windows 3.0
- Supertwist LCD VGA display with 16 gray scales
- Industry standard 3.5 inch 1.4MB floppy
- Math Co-Processor socket

### FOR THE CONVENIENCE

- Weighs less than 7 lbs
- Two hour battery life
- Complete desktop in one small package
- Small carrying case
- Fast recharge battery with external power supply

### FOR THE FUNCTIONALITY

- Two serial, one parallel, keyboard and external VGA port - All industry standard, just like a desktop
- Easy access Co-Processor socket - Upgrade machine to run Autocad, fast display speed
- Simple memory expansion and battery access - Quick and easy to change
- Windows 3.0 compatible
- Power management with Windows 3.0 aware sleep mode - expands battery life to 4 hours
- Optional external 5.25 inch disk drive
- Standard 83 keyboard with 101 keyboard emulation
- Optional full size numeric keypad

### FOR THE VALUE

- Darius one year warranty
- FCC B, UL and CSA approvals
- Darius' excellent price performance

## NEWSBYTES

for 1200 or 2400 baud use. Computers equipped with 9600 baud modems have a proportionally reduced number of hours. Use beyond the 12 hours will be charged by CompuServe at its regular connect rates.

Premier Online is another subscriber service offered by Aldus; it costs \$179 per year for each copy of the Aldus software, and gets the customer a discount on the price of any major new releases, automatic delivery of updates, free filter/driver packs sent automatically and other benefits.

The Corporate Library subscription offers more than \$6,000 worth of free software, toll free access to your own account executive, the Discovery training series, a free enrollment in an Aldus Technical Seminar and other services. The cost of the Corporate Library service was not available.

Brad Stevens of Aldus told Newsbytes that the Aldus forum presently on CompuServe will continue. However Stevens described the forum as reactive, and said the Online service will be more proactive. Stevens also indicated that there would be information on Online that would not be available on the CompuServe forum, which he said is an informal service. "Online will be a vehicle for us to go out and actively put information on that bulletin board that we know people are going to want to use."

The subscription rate for Online is \$249 annually. To subscribe to Online, call Aldus customer relations at 206-628-2320.

## IBM-PC 10 Years Old This Month

WASHINGTON, DC, AUG 6 (NB)—The IBM PC, based on the Intel 8088 microchip, carrying a whopping 64 kilobytes of memory and a low density, 5.25-inch floppy drive, was introduced to the world just 10 years ago this month.

The first system was unveiled to the press running a Microsoft operating system, MS-DOS 1.0, and nothing else in the computer was made by IBM except the nameplate, case, and the keyboard.

Many industry observers then and now say that nameplate was the most important contribution IBM made to help legitimize the fledgling PC industry.

One industry commentator did point out that the deal between Apple and IBM came just before the 10th anniversary of the introduction of the IBM PC and Apple Computer's going public and asked if this was the beginning of the end for both companies.

## IBM PC—The End is Near

BOSTON, July 26 —The original IBM Personal Computer is headed toward the end of the line. After ten years of faithful service to the computer community, the value of the original personal computer is fast approaching the level that makes it a donation item. The PC, originally priced as high as \$4,000 in 1981 at its introduction, has recently traded as low as \$200 and is frequently placed for donation rather than sold. "We are running out of people who want to buy these machines for cash," said Charles Thompson, Manager of the Boston Computer Exchange, "and the remaining owners realize that they have driven the machines for a rich and full lifetime." BCE will be sponsoring an official "Irish Wake" for the PC on August 12, 1991, at BCE office in Boston to mark the machine's tenth birthday and its transition from a salable commodity to a donation item. All BoCoEx Index readers are invited to attend. As the PC is slipped into the donation column, the XT showed it was headed in the same direction. With no more processing brains than the PC and nary more than a tiny hard drive, the XT is losing its value. The most popular of the XT's closed the week off \$100 at \$350 and buyers are expressing reluctance to buy into such old technology.

## IBM Celebrates PC's 10th Birthday

WHITE PLAINS, NEW YORK, AUG 13 (NB)—IBM has celebrated the 10th anniversary of its introduction of the IBM Personal Computer by issuing a statement containing a retrospective look at the development of the original product.

The statement said: "IBM began development of the PC in August 1980 in a small building at its Boca Raton, Fla. site. The original team of a dozen developers, led by Philip D. (Don) Estridge, was given 12 months to complete the project."

"The development team needed to break the rules, to go outside the traditional boundaries of product development within IBM, and they did. They went to outside vendors for most of the parts, went to outside software developers for the operating system and application software, and acted as an independent business unit."

"These changes enabled them to develop and announce the IBM PC in 12 months—at that time faster than any other hardware product in IBM's history."

"The IBM PC was introduced to the world at a press conference in New York City at the Waldorf Astoria ballroom, as well as several other locations around the country. The IBM PC used the Intel (A) 4.77 megahertz (MHz) 8088 microprocessor—advanced for the time, but slow by today's standards."

"The diskette drives offered 160 kilobytes (KB) of storage, the equivalent of about 50 single-spaced, typewritten pages. Users could plug the PC into

their home television set or choose from an optional monochrome or color display. A typical configuration of 64 KB of memory, a single diskette drive, a color display adapter and IBM Disk Operating System (DOS) was priced at \$2,665 (about \$3,950 in 1991 dollars.)"

The statement concluded by describing the decision to market the new systems not only through the establishment of IBM Product Centers but also through Computerland and Sears, Roebuck and Co.

Contact: W. Dean Kline, IBM, 914-642-5408.

## PC 10th Anniversary—Borland's Kahn Expounds

SCOTTS VALLEY, CALIFORNIA, AUG 12 (NB)—Philippe Kahn, chief executive officer of Borland International, one of the largest computer software companies in the world, said on this 10th anniversary of the introduction of the IBM personal computer (PC) that the technological changes in the next 10 years will make the decade look like slow motion.

Kahn, whose company is a leader in

object-oriented software technology, said: "In particular, object-orientation will revolutionize computer software just like microprocessors changed the face of the hardware industry in the '70s."

"The software business is going to undergo a revolution akin to the one that has happened in hardware. The move from transistors to integrated circuits introduced multi-application, compact components that were proven and extremely high performance. Object-oriented technology offers these advantages to the software industry," he

**Phone: 604-251-3036 or Fax: 251-3046**

added.

Kahn said he sees his company's focus on essentials—substance over form—as Borland's greatest strength: "Impatience is a rare virtue. ...Usability is key. With software, we figure that we have about five minutes. If the user can't operate the program without a manual in this amount of time he gets frustrated."

"In the decade ahead, customers will demand software products that interoperate and share information. The success of client/server architecture is dependent upon interoperable software applications," he added.

Kahn also thinks that this tendency in the software industry to think being the first to market with a product is what counts is fiction. He cites Quattro Pro as an example. "...We entered the spreadsheet market years after our top competitor [Lotus 1-2-3], and doubled our market share last year on the technical strength of our product."

"The same has been true for database management software and development tools. Being first buys you a short term advantage. Being best establishes a very special relationship with your customers," he said.

Kahn termed Borland's approach as developing "Best of Breed" products. That strategy seems to have worked. Borland reported profits for the first quarter of fiscal year 1992 as \$77 million, an increase of over 87.6 percent on the same period of 1991. Last quarter of 1991, the company showed profits of \$70 million and a net income of just

under \$8.5 million.

Borland's product line currently includes Paradox, Quattro Pro, ObjectVision, Borland C++, Turbo C++, Turbo Pascal for Windows and Sidekick. **Contact:** Sandra Hawker, Borland, Tel: 408-439-1659.

### Manzi To Keynote Canada's Netcon Conference

TORONTO, ONTARIO, AUG 12 (NB)—Jim Manzi, president and chief executive officer of Lotus Development, will be the keynote speaker at NetCon, a networking and connectivity conference scheduled for September 26 and 27.

Ed McMahon, marketing manager for show organizers Plesman Publications, told Newsbytes that this will be Manzi's first major address in Canada.

NetCon will be held in the Automotive Building at the Canadian National Exhibition Grounds. About 100 exhibitors, including Apple Computer and networking heavyweights Novell and Banyan, have signed up, McMahon said.

**Contact:** Ed McMahon, Plesman Publications, 416-497-9562, fax 416-497-9427.

## Gates Profile In September Playboy

WASHINGTON, D.C., AUG 12 (NB)—David Rensin writes in his September *Playboy Magazine* profile of Bill Gates, "Soft Icon," that on a recent vacation to the beaches of Brazil, Bill Gates—the founder of Microsoft—was found reading James D. Watson's book "Molecular Biology of the Gene" rather than ogling the bathing beauties Brazil is famous for.

Although not one of the famous *Playboy* interviews, the profile does include quotes from a former girlfriend and Gates himself as well as other acquaintances.

The article describes Gates as an "eccentric" although, in one example seemingly cited as showing how eccentric he is, his propensity for watching Oscar-winning movies in preference to regular TV fare, seems to be less eccentric than just a sign of intelligence.

## New CD-ROM Discs Make The Top Ten

WASHINGTON, D.C., AUG 13 (NB)—Many old favorites are on the second quarter's list of best selling CD-ROM titles compiled by the Bureau of Electronic Publishing, a leading marketer and publisher of CD-ROM hardware and software, but there are also three new titles that have reached the top ten.

"Reference Library" from The Software Toolworks, "Magazine Rack" from Information Access, and "Multimedia World Fact Book" from Bureau Development have hit the top ten, with placings of respectively, seventh, ninth, and tenth position.

Other top ten titles for the second quarter of 1991 were—in order from number one down: "Grolier's Electronic Encyclopaedia," "Microsoft Bookshelf," "U.S. History on CD-ROM," "World Atlas," "Compton's Encyclopaedia, Mammals" (sixth), and "McGraw-Hill Science and Technical Reference" (eighth).

For further information about any of these titles or to receive a catalog, contact: Bureau of Electronic Publishing, 141 New Road, Parsippany, NJ 07054 or phone toll-free on 1-800-828-4766.

Contact: Larry Shiller, Bureau of Electronic Publishing, 201-808-2700 or fax 201-808-2676.

## Macromind's Action! Multimedia Windows Package

SAN FRANCISCO, CALIFORNIA, AUG 13 (NB)—Macromind, which is merging with Paracomp, another multimedia software house, has announced a Microsoft Windows multimedia application called Action!

According to the company, the package lets users quickly incorporate sound, motion and animation with text and graphics for presentations. The program comes with dozens of templates and features a Clip Media Library with special sounds, stills, and animated graphics. The product is scheduled to ship in September and carries a suggested retail price of \$495.

Macromind has made its reputation in the Apple Macintosh market, with products like Macromind Director. Its growth has been slow because the Mac represents a small overall part of the computer market. Microsoft Windows is seen by Macintosh software developers as a potentially larger market, where their expertise in graphics gives them a leg-up over MS-DOS-based competition.

Contact: Bruce Cummings, Macromind, 415-442-0200.

## New Maximizer Lite

BURNABY, BRITISH COLUMBIA,

JUL 23 (NB)—Hoping to appeal to the owners of lightweight laptop and notebook computers, Richmond Technologies & Software has launched a scaled-down version of its contact management software, Maximizer.

The new Maximizer Lite package fits

on a single 3.5-inch diskette and sells for C\$129.

Laptops and notebooks without hard drives will be "definitely a big market for us," Earl van As, product manager for Maximizer Lite, told Newsbytes. He added that the product may also appeal to price-conscious and impulse

## NEWSBYTES

buyers, as well as to those users with older computer systems.

Maximizer Lite can maintain client lists and a to-do list and produce letters and notes using built-in word processing capabilities complete with spell checking. It lacks the support for multiple databases, income and expense tracking, file combining and updating functions, fancier list manipulation, and personal diary features found in the full package, van As said. Also, the spelling checker uses an 80,000-word rather than a 120,000-word dictionary.

The original Maximizer has been renamed Maximizer Advanced and will continue to sell for C\$395, with a network version priced at C\$895.

Contact: Earl van As, Richmond Technologies & Software, 604-299-2121, fax 604-299-6743.

### First-hand Look At New Hydra Card

NEWPORT BEACH, CALIFORNIA, JUL 29 (NB)—Newsbytes got an opportunity to see first hand an IBM personal computer (PC) compatible running the new card that enables a PC to look like and run Apple Macintosh software. The Andor One Card comes from Hydra Systems, a small start-up firm based in San Jose.

Once the PC was powered on, the program had to be started to enable the Macintosh capability. Once the executable file was started, it took a couple of minutes, but the familiar Macintosh screen began to draw and the smiling Mac appeared.

Very quickly then, the familiar

Macintosh screen appeared, but only in black and white, even though the monitor was color. Melissa Davies of Davies Bosch Associates, distributors of the Andor Card, explained that the Andor Card has not yet been able to take advantage of the color capabilities of the IBM personal computer.

Once the Mac screen was up, the mouse was used to start Microsoft Word 4.0. Everything behaved the way one would expect it to behave on a Macintosh. Newsbytes was able to load a Macintosh software product on the PC as well, in the Macintosh environment.

Amazingly, with Microsoft Word running, Davies pressed the two outside mouse keys simultaneously and moving the mouse to the right slid the Macintosh screen off to the right so only half was showing. Underneath was the PC screen with the instruction to press a key to go to the operating system prompt. Davies removed the Macintosh screen completely, pressed the Enter key and the DOS 5.0 shell appeared on screen.

Davies then gave the PC commands in the DOS 5.0 shell. After executing a few commands in the DOS 5.0 shell, and the Macintosh screen slid back, with Microsoft Word right where she left it. Pressing both shift keys had the same effect, but did not allow the user to control the rate at which the Macintosh screen slid onto the monitor from the right to the left as the mouse button control did. The key to start the DOS 5.0 shell in the DOS environment had to be pressed the first time the switch was made. After that, the switches

## NEWSBYTES

between the Macintosh environment and the DOS environment were just a matter of using the mouse or the shift keys and moving the screen over.

One note, to get the Macintosh operating system to look at the PC 3.5-inch drive, the F1 key had to be pressed. Normally on a Macintosh, once a disk is inserted in the drive the drive sends a signal and lets the operating system know the disk is there.

The Macintosh operating system does not come with the Andor Card and would have to be purchased separately. However, Word for Word word processing software and Disk Manager Mac is included with the card. The Andor Card also has a small, portable speaker that comes with it and plugs into the card to provide the sound capabilities of the Macintosh.

A minimum of 2 megabytes of RAM is required to be placed on the Andor Card in the form of 1 megabyte SIMMS, with 4 MB maximum possible.

## Windows Image, Audio Compression

CANOGA PARK, CALIFORNIA, JUL 22 (NB)—Optibase has announced new tools for image and audio compression: Optitools for Windows 3.0 and the +Audio coprocessor board.

Optitools is a software developer's kit for programming a Motorola digital signal processor (the 56001 DSP) that is

on the Optibase 100 and 500 compression/expansion add-in boards for compression and expansion of images and audio, the company said.

Optibase says its Optitools is better because it provides the right compression/expansion tool for the right job. Compression of images and audio is an important issue, as a minute of uncompressed video can take a gigabyte of disk space. Ray Harris, vice president of marketing for Optibase said, "The main issues in compressing images and audio are file size and integrity."

"As compression is increased, data is lost and integrity is compromised. Images, voice and music do not share similar qualities, and not all compression/expansion algorithms share equal capabilities. Maintaining integrity depends upon choosing the correct algorithm for a specific type of image."

Optibase says its Optitools product does just that with four types of compression/expansion algorithms. The four are Joint Photographic Experts Group (JPEG) for simple continuous tone images, AADCT for continuous tone images mixed with text, Lossless for absolute image integrity with compression up to 1:3, and Voice and Music that enables the addition of voice or music to applications.

Adding voice or music to applications that already include image storage and retrieval is where the +Audio coprocessor board comes in. "+Audio for DOS- and Windows-based PCs [personal computers] makes adding voice or music to an application a simple matter

of writing C-language calls in the program. We are providing this enabling technology for a range of customers, from PC vendors to telecommunications and media companies," said Harris.

One of the biggest applications for the new technology is desktop video conferencing. Harris said, "The 1990 market for desktop video conferencing alone was \$300 million, a figure we project will zoom to \$1 billion in the next four years."

Optibase says the board handles both digital and analog conversion, software buffers help minimize distortion and can compress in ratios as high as 1:8.

Contact: Ray Harris, Optibase, Tel: 818/719-6566.

## 119-Channel TV Add-on Board

TORONTO, ONTARIO, AUG 6 (NB)—AView Technology has announced DesktopTV, an IBM-compatible add-on board that turns the computer into an enhanced television, the company said.

The board is capable of receiving 119 channels, allowing VHF, UHF and cable TV channel selection, as well as Videodisc, VCR and other RF modulated NTSC inputs. Controls for the television are operated from the keyboard, and the sound is delivered by an external speaker which is included with the board.

"This is the first time a full-screen television option is being offered for

the PC for under \$400," said Dan Marshall, the company's president.

"I believe that we are opening a whole new world of desktop video applications. There are a wide number of possible applications for the board, from security and surveillance applications to distribution of training programs within a corporation, or for entertainment," he added.

The product has been developed in multifrequency and VGA versions. It is available direct from the company for \$395.

For more information, call 416-922-6555.

## Autodesk Animator Pro For Multimedia

SAUSALITO, CALIFORNIA, AUG 1 (NB)—Autodesk is shipping its new Animator Pro software package, a two-dimensional (2-D) software package for the IBM personal computer (PC) 386 and 486 or compatible computers.

With screen-resolution independence, animated cells and advanced tweening, text handling and paint features, Autodesk says Animator Pro gives graphics and video professionals real-time animation capabilities.

The company says Animator Pro is a mid-range product, a step up in capabilities from the entry-level Autodesk Animator software, but does not have three-dimensional (3-D) capability Autodesk 3-D Studio software has.

The Autodesk Multimedia Division, the division producing Animator Pro, was created last August and has intro-

## Microsoft Acquires X86 Software Emulation Rights

REDMOND, WASHINGTON, AUG 13 (NB)—Microsoft has announced that it is has acquired a non-exclusive license to Insignia Solutions Inc's software emulation of Intel x86 based PCs. Terms of the agreement were not disclosed.

Insignia Solutions markets SoftPC which allows DOS-based applications software to run on non-DOS based machines. Macintosh, Unix, and SPARCstation versions are available. Insignia also markets AccessPC, which reads DOS disks and displays the files as icons on a Macintosh.

Insignia's technology recreates the IBM AT environment using proprietary software, and the license gives Microsoft the right to incorporate that technology in future product offerings.

Asked about the specific intent of Microsoft's acquisition of the emulation technology, a spokesperson for Microsoft told Newsbytes that the company had acquired the rights for future use, not for a specific purpose at the present time.

Announcing the deal, Ivor Share, Insignia Solution's VP of sales, said: "We believe Microsoft's implementation of software emulation will be the most innovative in the marketplace."

Steve Ballmer, Microsoft senior VP of systems software, said: "With the help of

Insignia's technology we can preserve customer investment in MS-DOS and Microsoft Windows environment applications in our future system software products, on both advanced Intel-based systems and on other platforms."

Insignia, headquartered in High Wycombe, England, employs 110 staff and has U.S. marketing, sales and support offices in Sunnyvale, California, and Andover, Massachusetts. The company, which was founded in 1986, was initially funded by a consortium of British and Dutch venture capital firms. In 1990, Insignia Solutions reported revenues of \$8 million.

## New Graphics Board Makes Windows Twice As Fast

SANTA CLARA, CALIFORNIA, AUG 13 (NB)—Actix has announced its new Tiger 10 video graphics adapter (VGA) boards for corporate users of DOS and Windows.

The company claims that the new boards double the speed of running Microsoft Windows while increasing the quality of the video image displayed.

The Tiger 10 displays up to 256 colors simultaneously, creating photo realistic images, company officials said. The speed comes from a graphics co-processor that makes screen displays twice as fast. Reduction of flicker also occurs with a screen refresh rate of up to 90 megahertz (MHZ), the company claims.

Actix officials added that the 100 percent acceleration is carried out using a proprietary Windows driver in combination with technology from Texas Instruments.

The new card offers resolutions from 640 x 480 dots per inch (DPI) to 1,280 x 1,024 DPI. For higher quality images Actix said that the Tiger 10 can generate resolution of 1,280 x 96 noninterlaced images. Interlacing is simultaneously projecting two screen images over one another to get an effect. Non-interlaced images are sharper and have truer color, producing a crisper, more realistic

## Norton Desktop For Windows

CUPERTINO, CALIFORNIA, AUG 1 (NB)—Symantec has announced the Norton Desktop for Windows product has begun shipping.

Symantec claims the product allows users to copy, move, view, launch, delete and print files. Files are printed by dragging the icon for the file to the printer icon, viewing by dragging the file icon to the viewing icon, and copying and other functions are accomplished in the same manner, the company said.

File viewing supports all the major spreadsheet, word processing, database and graphics file formats including, Excel, Lotus 1-2-3, WordPerfect, Microsoft Word, AmiPro, dBASE, .PCX, .BMP, .GIF and .TIF, the company said.

The company says the product also

includes an automated data backup, data recovery and network support. Background operation is offered so backups can be run while the user is working, and a Norton scheduler allows backups and other routine activities to be run unattended at predesignated times, Symantec said.

The Norton Disk Doctor for Windows is included in the product and allows users to diagnose and often solve common disk problems, Symantec said. An Emergency Disk allows users to repair, unformat or optimize disks and recover erased files even when Windows cannot be accessed, the company claims.

SmartErase is also included and contains Unerase, a utility for recovery of deleted files, the company said. Other utilities include SuperFind for searching for files, Batch Builder for creating Windows batch files, Icon Editor and Librarian for creating and modifying icons, KeyFinder for pasting unusual characters or symbols for use in documents, Sleeper for screen blanking with nine different screen displays, and Launch Manager for starting any Windows or DOS program from within any application currently in operation.

Norton Desktop for Windows does not alter the look or feel of Windows, Symantec said, so users do not have to be concerned about another "program layer" on top of Windows.

The Norton Desktop for Windows retails for \$149 and includes The Norton Backup which is a stand-alone

## LASER PRINTER SERVICE

AND DATA PROCESSING SUPPLIES

**Have your laser printers been cleaned within the last 12 months?**

It is recommended to have them professionally cleaned at least once per year to maintain top working order and also to help minimize wear. Dust and paper particles, as well as smoke residue can hinder the proper operation of these technical machines.

### Borland Shows Off New Functions In Windows Products

PASADENA, CALIFORNIA, JUL 23 (NB)—Newsbytes got a sneak preview of Borland's new Windows products, including Paradox for Windows, Object dBASE and Quattro Pro for Windows presented by Philippe Kahn at a special meeting of the Pasadena IBM Users Group at the Pasadena Hilton.

Kahn talked about the importance of object orientation, saying: "Object orientation will be to the software industry what microprocessors were to the computer." Borland sees object orientation as essential to the industry and has made some logical, but new, object-oriented innovations in its Windows products.

Kahn said that part of the concept of object orientation to him was user being unaware of the structure of the data behind the program. Kahn said object orientation should be done in such a way that users do not have to be concerned with data formats, but the user should just be able to start a program and use data from any other pro-

gram. The data structure handling should be done internally, by the objects themselves, he added.

In Borland's database products for Windows, Borland doesn't believe in a "native" database, and has done what Kahn called "database promiscuity."

Kahn added that Borland has already scrapped Ashton-Tate's proposed plan of making dBASE V incompatible with dBASE IV, if the sale goes through. Data from any database program can and should be available to any other database program, he said. That connectivity is planned for Borland's database products: "Users should be able to choose a product based on the product, not the format of their data."

Not only was the data transportable between applications, but Kahn said programmers will be able to create applications that run under Windows or DOS with the same source code, simultaneously. Kahn added that Borland took an existing SBT database application, and with no modification of the source code, turned it into a Windows application.

Kahn demonstrated a part of Object dBASE called the Resource Workshop, in which a user could create Windows menus in a non-Windows application and modify executable files without having the source code.

Containership is another concept introduced in the new Borland Windows products. Just as when a glass of water is moved and the water in the glass moves with it, so when objects on the screen are moved, any icons within

icons in a Borland Windows product will move with all the functionality attached, when the icon is moved. So a button inside a box that executes a macro to tile the Windows in Quattro Pro, will be in the same place relative to the box, with the same functionality, when the box is moved, Kahn said.

The Windows versions of all three Borland products, Object dBASE, Paradox and Quattro Pro had full desktop publishing capability with word processing and graphics. All three were

demonstrated on industry standard computers, either a 80386/20 or a Toshiba 1200 portable 80286 computer and performance appeared to be very good.

Kahn made much of Borland's new use of the right mouse button. Rather than the right mouse button being used as a duplicate of the left, the right mouse button in Borland Windows products, when clicked on an object, brings up the set of choices available for that object.

Kahn said that Borland's use of the right mouse button for allowing the user to make changes to an object on-the-fly, in context, is planned for all Borland Windows products.

The three Windows products were not given a definite release date, but Kahn said all would be released in less than nine months. Paradox for Windows is expected to be released first, and Kahn said it was very close to release.

### Borland's Quattro Pro/Paradox Windows Upgrade Plan

SCOTTS VALLEY, CALIFORNIA, JUL 29 (NB)—Hoping to insure a future share of the lucrative Windows market and the database management system market at the same time, Borland International has introduced a new upgrade plan, called the Passport Program, which guarantees special upgrade pricing to the Windows ver-

## NEWSBYTES

sions of its Quattro Pro 3.0 and Paradox 3.5 products.

The plan applies to anyone who purchases and registers their Quattro Pro 3.0 or Paradox 3.5 products after July 1.

Anyone who purchase a full retail upgrade, competitive upgrade or LAN Pack version of Quattro Pro 3.0 after that date is eligible to upgrade to Quattro Pro for Windows (or the next DOS version of Quattro Pro) at the special Passport price of \$49.95.

Additionally, the company says that anyone who purchases a full retail, upgrade, competitive upgrade or LAN Pack version of Paradox 3.5 after July 1 qualifies to upgrade to the Windows version (or the next DOS version) of Paradox at the special Passport price of \$139.95.

Doug Antone, senior vice president, worldwide sales at Borland, said: "By investing in Borland's software today, (customers) are guaranteed the next upgrade version at a significant savings."

The company maintains that customers must register their Quattro Pro 3.0 or Paradox 3.5 products to qualify for the Passport Program upgrade pricing. Registered users will then receive advance notification when products become available, confirming the special Passport upgrade price.

The promotion will be applicable only on Windows or DOS upgrades available by March 31, 1992.

Borland recently announced another promotion concerning Quattro Pro 3.0 and Paradox 3.5. In that promotion, which runs until October 31, 1991, anyone buying the \$495 retail version of Quattro Pro 3.0 or the \$795 version of Paradox 3.5 can get a free copy of the company's Sidekick 2.0.

## Microsoft UK Reveals Plans For OS/2 And Windows

LONDON, ENGLAND, JUL 29 (NB)—Microsoft is actively encouraging users of OS/2 to migrate to the Windows environment, despite the fact that the software house is committed to developing OS/2 V3.0 for IBM. At the same time, Microsoft has firmed up its plans for the next generation of Windows, which it calls Windows New Technology, Windows NT for short.

Senior officials with Microsoft U.K. today outlined their plans for OS/2 and Windows, explaining that users are really after Windows. According to David Svenson, Microsoft UK's managing director, "There is a lot of FUD (fear, uncertainty and doubt) out there."

"Today we intend to clear this FUD. Steve Ballmer has been doing the rounds in the U.S. We're going to do the same in the U.K.," he added.

Svenson said that U.K. sales of Microsoft software are riding high. "They're better than the year before. This makes us the largest software company in the world," he said.

Dave Smith, UK systems manager with Microsoft, said that the company's strategy is now to sell and support Windows in a big way. "Microsoft Windows is the strategy we are embark-

ing on," he said.

Smith went on to say that Microsoft is also planning to actively encourage OS/2 users to migrate to Microsoft Windows. This is despite the fact that Microsoft is committed to developing OS/2 Release 3.0 for IBM. "It's important to ensure OS/2 users migrate quickly to Windows," he said, adding that Microsoft is working hard to migrate OS/2 users to the Windows environment.

IBM, he said, has not made it clear what is happening with OS/2 version 3.0. This has resulted in a considerable amount of speculation as to the future of the operating system.

Microsoft is hoping to lure OS/2 users over to the Windows environment with the promise of Windows NT. Earlier and current editions of Windows (to version 3.1) have been graphical user interfaces (GUIs) overlaying onto a DOS base. Windows NT, said Microsoft, will be a bootable operating system in its own right, without the need for the user having to boot from DOS or OS/2.

Windows NT is now on target for a 1992 release. Version 3.1, meanwhile, is being readied for release before the end of the year. Microsoft officials refused to be more specific on these dates.

Features of Windows NT include support for multiple platforms, including 80386 and RISC microprocessors; Multiple DOS sessions; and the ability to emulate a DOS session from within the Windows environment without loading a copy of DOS into memory.

## Buttonware's PC-File 6.0

BELLEVUE, WASHINGTON, AUG 8 (NB)—ButtonWare has released PC-File version 6.0, its dBASE-compatible, flat file database.

ButtonWare says the program is easier to use since it offers a Windows-like interface with buttons, scroll bars, pull-down menus and dialog boxes, but without the heavy RAM (random access memory) and disk requirements that Windows products require.

PC File 6.0's menu structure has been redesigned to add pull-down menus, and has the option to run in character mode. It can locate files on any drive or directory, and supports the use of a mouse. Help screens have been expanded to allow users to scroll through detailed information, and general navigation help screens are available.

PC-File sells for \$75-100 at retail outlets, and registered owners of earlier versions can update for \$49.95. A LAN version is also available with a five workstation license for about \$250. The new program is not available as shareware, like earlier versions were.

Contact: Dee Dee Walsh, ButtonWare, 206-454-0479, fax 206-454-1838.

## HP Intellifont For Windows—Free

GREELEY, COLORADO, JUL 18 (NB)—Hewlett-Packard (HP) is offering its HP III customers its HP Intellifont-for-Windows 3.0 free, just for

the asking.

HP says the Intellifont-for-Windows software comes with matching screen fonts for the CG Times and Univers fonts that come with the HP Laserjet III, IIID, IIIP or IIISI printers. The new software also allows the user to create matching screen fonts, without leaving Windows, for any HP accessory scalable typefaces the user wants to add, the company said. Font scaling on-screen allows the user to see exactly what is printed, not just an approximation full of jagged edges, for what-you-see-is-what-you-get (WYSIWYG) viewing of documents.

HP said Intellifont-for-Windows allows background printing and allows the user to change fonts on-the-fly, without planning ahead and without leaving a Windows application.

Intellifont-for-Windows 3.0 requires an HP Laserjet III family printer, at least an IBM AT or compatible personal computer (PC) with a high density 5.25" or 3.5" floppy drive, 2 megabytes of random access memory (RAM) and Windows 3.0, HP said. As a side note, Windows must run in Standard or Enhanced mode, which requires 1-2 MB of RAM—real mode is not supported.

The company has set up several ways for HP users to respond to the offer for

Intellifont-for-Windows 3.0. Users are invited to call (303) 353-7650 or fax their request to (303) 352-6152. Users can also mail their request to Hewlett-Packard, P.O. Box 1754, Greeley, Colorado, 80632-9936. Some users are receiving an invitation by mail to obtain the new screen font software.

Hewlett-Packard also said it is also entering users who respond into a drawing for an HP scalable typeface product. But, of course, it's for a limited time only.

Contact: Cathy Lyons, Hewlett-Packard, Tel: 303/353-7650, Fax: 303/352-6152.

### Problems with DOS 5.0

LOS ANGELES, CALIFORNIA, JUL 18 (NB)—All new software seems to be plagued with problems and Microsoft (MS) DOS 5.0 is no exception. Problems with accounting packages, disk utilities and network software seem to be the major sources of grief for some Los Angeles and San Francisco-based consultants.

Steve Sacco of Amcom consulting services told Newsbytes he likes DOS 5.0 and has upgraded to it on the systems of several of his customers without mishap. However, with a client running Autocontroller, an accounting package,

the backup program would no longer work, Sacco said. He tried the "Set Ver" command recommended in the documentation—a command which is essentially a "lie" to the software so the software thinks it has the version of DOS it is expecting and keeps running. Sacco said it didn't work, and he had to give up and uninstall DOS 5.0.

A technician at MS Tech Support confirmed that several accounting programs have difficulty with DOS 5.0, including Peachtree and AMI.

Mark Florence and Fred Gault of the Canyon Company in San Francisco found less serious problems. Florence said upon installing DOS 5.0 on an IBM PS/2 Model 7 the DOS shell locked up completely and the machine had to be completely powered off. On

another AT-class IBM compatible computer the shell had no color at all on a color monitor. In both instances they gave up and uninstalled the software. "We don't have time to mess around with it," Florence said.

Users can also expect problems with hard disks low or high level formatted, or partitioned with software that ". . . does not follow MS standards," said an MS support tech, who named specific software titles, including SpeedStor and Ontrack's Disk Manager.

Users who call MS Tech Support should be prepared to be persistent and to wait. It took Newsbytes 15 calls over a 1.5 hour period to get through, and 20 minutes of waiting once the phone was

# You Pay Your Money and You Take Your Chance

by Gordon Young

Quality control is the name given to practices in manufacturing industries that establish and maintain standards of quality in manufactured goods. Random chance affects manufacturing quality so statistics is part of quality control. The computer manufacturing industry, like most others, practices quality control.

Quality control matters when you buy a new PC computer system. IBM clone systems are built with components from different manufacturers. Motherboards, modems, monitors, printers, keyboards, drives, chips: all the many components can come from different manufacturers before they're put together to form the whole computer. Often buyers find component-based PC systems are the lowest priced. Vancouver has many retail dealers building and selling component-based PC systems.

Computer component manufacturers vary in their policies on quality control. Some impose high standards in manufacture that ensure components are almost all good and very unlikely to fail. Some have looser standards of manufacture, maintaining standards of quality in the marketplace by promptly repairing or replacing defective components returned under warranty. A few rotten-apple manufacturers produce poor-quality items, sell them cheap, ruin their own reputations and go broke, leaving a legacy of bad compo-

nents failing on their owners with no manufacturer to honor the warranty.

What are the odds of buying a brand new component PC system that has something wrong with it? New buyers can make the mistake of thinking that because their new computer cost them thousands of dollars and is very high-tech that it must be infallible. This is false. Statistics of quality control give the odds on defects appearing in a new component PC system. The odds are surprisingly high.

### The Last Shall be First

Defects in a new computer system are likely to crop up anywhere. This is important for first-time buyers of complete systems to know. They are often computer novices who are gradually learning. The range of use of their system expands as they learn. From basic low-end functions they progress into specialized and advanced high-end functions.

Defects are just as likely in high-end functions as in low-end functions. But it takes time for the learning novice to get into these high-end function and discover the malfunctions that defects cause. This can be time enough for the warranty on the defective component to expire. This leaves owners stuck with the bill for repair or replacement if they want to use the high-end function that they bought and paid for but never received.

Quality Control Level of a Component PC System  
(Probability of No Defects)

**QUALITY CONTROL****A False Faith**

The idea that computers and computer components should be infallible because they are high-tech puts misguided faith in technology. Computers are complex and complicated. They are made up of enough parts, any of which may fail, that what is loosely called the law of averages or more accurately the long-run argument applies. Computer components can be trusted to behave as statistical entities with a probability of failure and a complementary probability of success.

"Failure" is when something goes wrong. Hard discs crash, files don't copy, printer heads break, modems don't connect, and on and on and on. Experienced computer users know bugs are part of using these computer systems.

"Success" is when things go right. The computer runs smoothly doing what it is supposed to, lulling the user into a treacherous sense of security. Things will go right some of the time, even most of the time, but not all of the time. Over a long-enough run the law of averages will catch up and high-tech computers and computer components will fail.

**Setting the Standard**

Manufacturers generally produce to a set standard of quality control. This standard is measured by the proportion of defective units produced out of the total units produced. It is expressed as a percentage or a decimal fraction between 0.00 and 1.00. It is also the probability of any given unit being defective, for example the unit you get as part of your brand-new computer.

Consider a fictitious hard drive manufacturer. The standard of quality control they set for themselves might be that one drive in twenty is defective. That is, one drive in twenty will fail while within warranty. Items that fail outside of warranty are not considered defective by most manufacturers.

The defective rate is 1/20, which equals 0.05; 5 % of the hard drives are defective, 95% are non-defective. In quality control these values are expressed as statistical probabilities. The probability of a "failure", a defective drive, is  $P(\text{failure})=0.05$ . The probability of a "success", a non-defective drive, is  $P(\text{success})=0.95$ .

A  $P(\text{failure})$  expressed as a percentage is called a failure index. Failure indexes of 5% or 1% are the most common quality control standards in industry. Sampling and testing procedures enforcing quality control standards are usually based on tables, charts and protocols that assume a 5% or 1% failure index.

**"You like Statistics? YECH!!"**

That's what one charming young lady said when I told her I wanted to study statistics. I was escorting her on a walk around the seawall on our first date. I didn't get a second.

I did go on to study statistics. At the risk of ruining my chances for a vibrant

## QUALITY CONTROL

love life forever, I'm now going to tell the whole world about it.

Here comes some math. Readers who recoil in horror can skip to the graph which summarizes the math. But some readers will see the logic, get an aha! experience and be strongly impressed.

Start by thinking of a single computer component manufactured to a lower quality control standard with a failure index of 5%. It has a 95% probability of being free of defects (success!)

Now let's add to it another computer component with a failure index of 5% as we begin to build our whole computer system. For the whole system to be free from defects both components must be free from defects. In statistics we calculate the probability of this success by multiplying the probabilities of the two separate successes.

So the probability of the system being defect-free is 95% \* 95%, or 0.95\*0.95=0.9025. Our two-component system has a 90% probability of being defect-free, and a 10% failure index.

Let's add a third component with a high standard of quality control. It has a failure index of 1%, and a 99% probability of being defect-free. The probability of our three-component system being defect-free is:

$$(95\%)*(95\%)*(99\%) \\ =0.95*0.95*0.99 \\ =0.89=89\%$$

There is an 89% probability of no defects and an 11% failure index.

Some readers will have noticed the pattern. As components are added, the probability of defects is increasing. The overall standard of quality control is slipping as the system gets more complex. Even when the components are of high quality the overall quality control standard will slip as component after component is added.

## The Best of Times, The Worst of Times

Now we can construct best- and worst-case scenarios for quality control standards in component PC computer systems. The quality control standard of a given system depends on the number of components in the system, falling between the best-case and worst-case scenarios.

The best-case scenario is that all the components are manufactured to a high-quality control standard with a failure index of 1%. If we say the variable  $n$  is the number of components, the failure index for the whole system follows the formula  $1-(0.99^n)$ . This is the lower line on the "Failure Index" graph.

The worst-case scenario is that the components are all manufactured to a lower quality control standard with a failure index of 5%. The failure index for the whole system follows the formula  $1-(0.95^n)$ . This is the upper line on the "Failure Index" graph.

For those who know what it means, these are exponential decay formulae.

The quality control standard decays exponentially as the number of components in a PC computer system goes up. This decay process is represented in the "Quality Control of a PC System graph."

Look at a best-case scenario of a system with a high quality control standard of 1% failure index on all components. The quality control standard drops below an adequate level of 5% failure index if there are more than five components. A short list of motherboard, monitor, keyboard, printer and one floppy drive makes up a computer system that barely passes in a best-case scenario. Any system more complicated is sure to have an unacceptably low quality control standard.

A fully loaded PC computer system can have twenty or more components. A best-case scenario gives a failure index of 18%, more than one chance in six of a defect in the system. A worst-case scenario give a failure index of 64%, a bit less than two chances out of three. These are pretty long odds to face when gambling with thousands and thousands of dollars of your hard-earned money.

## The Cure

The components themselves have components. They follow the same logic of quality control standards. But the unit has passed the manufacturer's quality control standards before going to the dealer. By themselves the components have an adequate quality control standard.

It's when the dealer puts all the components together to make the whole computer system that the quality control standard slips. The whole system, sold as a single unit ends up being manufactured to a poor quality control standard. The cure for this is another level of quality control. Dealers can re-establish a good quality control standard if they test and burn-in the total system before they let the buyer take it out the door.

Thorough testing by the dealer runs special testing software. These programs run and check all functions, high-end and low-end. A conscientious dealer checks test results, returning defective components to the manufacturer and replacing them with components that do pass the test. This drastically reduces the chances of a buyer getting a system with a defect.

Electronic components like motherboards and expansion cards are likely to be fine indefinitely if they pass their initial testing and burn-in. With proper power surge protection they can long outlive both you and I.

Components with moving parts (hard and soft drives, printer heads, keys, etc.) will gradually wear out and eventually fail. They will probably fail outside of warranty but hopefully after a long lifetime of stalwart service. Initial testing should move all the moving parts and move them enough that initial breakdown problems are unlikely and a long working lifetime can be expected.

Dealers who test equipment thoroughly before passing it on to a buyer are not going to be the cheapest.

## QUALITY CONTROL

Failure Index

Testing requires extra person-hours and resources and the cost must be passed on to the buyer.

Testing may not be as important to experienced computer users or to those buying only one component at a time to add to an existing system. Individual components from different manufacturers are usually produced to a good quality control standard. Experienced users are likely to spot the odd defective unit if they get one. For these buyers, mail order or large-volume discount dealers may provide best value for the dollar.

Complete systems from a single manufacturer form a single production unit. For example, a portable computer from a major manufacturer (Sharp, Toshiba, etc.) will be manufactured and tested to that company's good quality control standard. Though it doesn't hurt, dealer testing is not as necessary for these items.

Novice computer users buying a new component PC system are at the other extreme. They may lack the experience to recognize poor performance, or may put it down to their own lack of expertise. If they do find a defect they can have an obstacle explaining it to the dealer to get it serviced under warranty.

For these buyers it is more valuable to choose a dealer who tests the equipment for them. It costs more in retail markup but is likely to save money and problems in the long run. Remember that the individual components were manufactured to an adequate quality control standard. The math showed that it is when they are all put together into a PC that the quality control standard drops past the point where the chance of getting a defect in a system is too high.

Dealer testing and burn-in, repairing or replacing of components re-establishes a good quality control standard for component PC computer systems. In the unregulated PC clone market it is the dealers who provide the quality control standard the buyers receive.

### Buyer Beware

These are good reasons for new buyers to choose a dealer who thoroughly tests and burns-in a new component PC computer system before the buyer takes it out the door. Remember the way the probabilities worked out. In a multi-component system there will be between one chance in ten and two chances in three that there is something wrong with it somewhere.

### Summary

Today's PC computer systems are made up of different components from different manufacturers. Each component is probably made to an adequate quality control standard by its manufacturer. But the statistical effect of putting many different components together into one computer system causes the quality control to slip surprisingly far below an acceptable standard.

Dealer testing and burn-in establishes a good standard of quality control for component PC computer systems.

# OmniPage Professional

by Nelson Ruest

Product: OmniPage Professional 3.0  
Manufacturer: CAERE Corp., 100 Cooper Court, Los Gatos, CA 95030, (408)395-7000  
System requirement: 386 PC with Windows 3.0, 8MB Hard disk, 4MB RAM.  
Price: \$1195 (software only)  
Scanners supported: Abaton, Brother, Canon, For, HP, Lightspeed, Mectel, Microtek, Panasonic, Ricoh, Sirius, Umax, Visa, Wang, and more...  
Fax boards supported: Brother, Complete PC, Gammalink, Hayes, Intel, Panasonic, Quadram  
Rating: \*\*\*\*\* (see below)

"Optical character recognition (OCR) is often heralded as the answer to all input prayers. And so it should be. The ability to input text into word processor format without retyping is well worth its weight in gold...if it works."

What I wrote two years ago still stands. Readers of *The Computer Paper* may remember last year's review of Macintosh OCR software, "Scanning for Text Recognition," published in the September 1989 issue. At that time, we reviewed four different OCR software packages. Our conclusion was that OmniPage for the Macintosh was by far the best product in its class.

Today, OmniPage Professional is available for the Windows 3.0 environment. Based on the performance of the Macintosh version, we would certainly expect similar results for OmniPage for Windows. The answer is yes! If anything, performance for OmniPage Professional outclassed OmniPage for the Macintosh. The simplicity of this software far outclasses any other OCR software we have seen to date. And the resulting output is of extremely high quality. Let's examine why.

OmniPage recognizes text by identifying text blocks on a scanned page.

continually manufactures innovative products from mice to scanners to digitizing tablets that extend your imagination beyond the ends of the earth. In addition to innovation, we believe in simplicity, service, and reliability. So stay with a name you can trust, Call your distributor today **Genius...Simply Genius.** for information on our complete product line.

**How does OCR work?**

Ideally, Optical character recognition means having a software product linked to a scanner. Take a piece of paper with text on it, place it on the scanner and read it. Later, edit the words in a word processor. It should be as easy as that.

Well, it's not, not usually anyway. The problem with reading text is that not all text is the same. Some of your output may be in a variety of typefaces; some of it may be in book form, some may be in laser printed form, others may be in dot matrix form. Each of these different types of documents

OmniPage Professional can automatically save text in any of 49 different formats.

challenges the OCR software to perform different types of tasks.

Most manufacturers of OCR software know that these situations will arise in any given office. But most assume, correctly, that not all of these situations will occur at each office.

To circumvent the problem of making a software product which reads everything, these vendors use a matrix-matching system. This means that the software matches a series of dot patterns which form the character (bitmaps) to a library of character shapes stored inside your computer. If the shapes match, the letter is identified. If not, an error character is inserted.

The problem with this method is that only so many libraries of characters are shipped with the product. If the text your office reads is not contained in the character library, you will need to build

your own. This means that you must train your software to read your particular documents. This method is fine if you only have one specific type of document, but what happens if you have dozens of formats? That's where OmniPage Professional comes in.

In CAERE's own words, "Converting a bit-map to ASCII code might seem simple, since we humans have been recognizing text for most of our lives, but to the computer it is no

OmniPage Professional offers several text formats and sophisticated scan controls.

easy feat...OmniPage, a page-recognition program, uses revolutionary OCR technology that analyzes individual character features (feature-analysis) rather than matches shapes (matrix-matching)." And believe me, it works! OmniPage read just about anything we put to it. It read it right and it did it within seconds. No training was involved. Better yet, OmniPage trains itself. We found that the more you read the same text formats, the faster OmniPage reads it. It read anything from monospaced text (from a

typewriter or daisy wheel printer) to dot matrix printouts to faxed pages to magazine articles. And it read it with an accuracy ratio of between 80 to 99%. These results are hard to beat.

### Installing and Using OmniPage

OmniPage Professional requires a 386 PC with 4MB of RAM and Windows 3.0 installed. You can use it on a 286 AT, but you need to purchase a co-processing board along with the software. The price of this board alone (about \$1000) makes it worthwhile to get a 386 computer. Installing OmniPage Professional is a snap. Installation is performed through Windows. Select a directory for OmniPage, select the file formats you need, select the scanner you use and insert the appropriate disks. The next step is to create a windows swapfile (a swapfile is a special hard disk section which Windows uses in enhanced mode to store temporary information). This step may be confusing to new Windows users, but instructions are clear and simple in the OmniPage manual.

Once this is done, start OmniPage. Making sure the scanner is turned on, choose Scan from the Process menu. Set your Scan/Recognize Settings and click OK to begin the recognition process.

In its simplest form, scanning with OmniPage is very straightforward. If your scanner includes a sheet feeder, load it up, set OmniPage to automatic save and automatic spell check and go for lunch. When you come back OmniPage will be finished.

If you prefer to work in interactive mode, simply change the settings. OmniPage will let you choose interactively which portions of each page you wish to recognize. This process is more time consuming, but sometimes offers better results (less garbage in the text such as headers and footers, etc...).

OmniPage is the best OCR software package to choose today. It is easy to install, simple to use, fast, and accurate. The type of text which can be entered through OmniPage includes just about anything you can think of from mailing lists to spreadsheets to encyclopedias. OmniPage supports 49 different text formats from dBASE through Lotus 1-2-3 or Microsoft Excel through just about any word processor. The only real disappointment with OmniPage is that it does not include a Word for Windows filter, though it does include a Rich Text Format filter which can be converted to Word for Windows.

Anyone who owns a scanner and Windows 3.0 should seriously consider getting OmniPage Professional. With its workload throughput it will easily pay for itself in a matter of days if not hours.

The Rating Scheme is based on a scale of 1 to 6. The poorest performance receives 1 star while the highest receives 6 stars.

Nelson Ruest is a trainer and consultant with Resolutions Enterprises, an Ottawa-based publishing consulting firm.

# The Five Secrets of Power Programming.

## Presenting Matrix Layout 2.0

The secret is out. The first program to offer you the power to create complete, professional-quality software on your IBM PC is now more powerful than ever. Presenting Matrix Layout 2.0, and the secrets of power programming.

### Secret #1:

#### The CASE of the OOP Flowchart

Layout 2.0 is built around CASE (computer aided software engineering) and (OOP) object oriented programming. CASE lets you create sophisticated programs simply by drawing a flowchart. OOP allows you to add functions by moving graphic objects within the flowchart. Or use the BlackBox Manager to install pre-programmed capabilities—like telecommunications or dBase file access—in your program.

### Secret #2:

#### The Hypertext File

Layout 2.0 offers you full hypertext capability, allowing you to create HyperCard-like cards containing text, graphics, buttons, and BlackBoxes. Then, link them to related cards in any file. Use your cards to create stand-alone hypertext applications or add them to your flowcharts.

### Secret #3:

#### Graphically Speaking

Layout's simple graphic interface makes it easy to learn and simple to use. But more importantly, it allows you to incorporate windows, menus, and other graphical elements in your own programs.

### Secret #4:

#### Our Coded Message

Once you've designed the functions you want, Layout 2.0 will automatically write the code (real, commented code!) in your choice of Turbo C, Lattice C, Microsoft C, Turbo Pascal, and QuickBASIC languages. Or just create a .EXE file for use with any IBM PC.

### Secret #5:

#### A Fast, Powerful Finish

Creating complete, stand-alone programs with Layout 2.0 can cut your development time by up to 70%, helping you get more done in less time. And once your programs are finished, Layout 2.0 supplies the finishing touches by creating the help files and documentation you need to teach your new program to others.

Product: Hitachi 1750S CD-ROM Drive for Macintosh

Manufacturer: Hitachi (HSC) Canada Inc., 6740 Campobello Road, Mississauga, Ontario L5N 2L8; 416-821-4545

Requirements: Macintosh (Model 1750S) and IBM-compatible (Model 1700SPC) versions available. (Mac version tested.)

Price: US\$965, \$C1249

## Design Issues

Maybe it's just us, but this product doesn't seem to be designed very well. Should the Power button be less than one inch away from the Eject button? Should it be difficult to insert a CD with one hand? Should there be a drawbridge-type spring-loaded door that snaps upward, catapulting air and possibly dust toward the area of the inner mechanism? Why is there an IN port on a READ-ONLY device, anyway?

The very first CD that we inserted got stuck (a situation we were able to consistently reproduce by not snapping the cover of the disc caddy fully closed), and once stuck, proved very difficult to remove from the drive, using the manual eject button or even the "emergency eject" hole (into which one must push a straightened paper clip).

Admittedly, we deliberately "torture test" all gadgetry that crosses our desks, in an attempt to simulate normal useage patterns, but it is worth noting that no other CD player we've tested got a disc stuck under similar conditions.

Audio CD can be played via a convenient desk accessory.

The drive can act as an audio CD player, too, although no internal speaker is provided. A headphone jack and RCA sockets allow connection to audio equipment. The drive comes with software that includes a desk accessory for playing audio CDs, as well as drivers for the obligatory High Sierra and ISO 9660 disc formats.

## Fastest Drive

Conservatively rated at 350ms, the Hitachi's access speed is faster than that of any other CD-ROM drive we've seen (even other 350ms units), and the Power button is rather convenient on the front panel. (By comparison, the old NEC CDR-72 player we own has the power switch on the back underneath the SCSI ports!)

Initially, we were amazed at the speed of this drive. To give you an idea of its performance relative to other drives, a 2.5MB file loaded from the Hitachi in 19 seconds. The same file took 48 seconds to load from our EMAC Metro CD drive. On a reasonably fast (19ms) hard drive, the file loaded in just under 10 seconds.

However, we soon began to notice a disturbing trend in discs that the Hitachi read. The Desert Storm disc (reviewed in our June 1991 issue) had severely distorted audio, and the Ocean Imagery disc of Photoshop pictures (portions of which were used for the July 91 issue's cover) consistently displayed garbled TIFF images. Both of these discs worked properly on other CD-ROM drives tested. Thinking we may have received a defective unit, we sent the drive back to Hitachi. Unfortunately, the replacement the company sent performed identically, even when checked on a different Macintosh (running no other INITs or other unusual system additions). Could it be that the Hitachi's impressive speed comes at the expense of data integrity?

The plastic dust cover flap of the 1750S became a constant annoyance, as it impeded the convenient insertion of discs. Because the disc caddy must be pushed into the slot with your finger, the flap always interferes with the procedure as it snaps closed behind the caddy—and your finger.

# CAD Computer Aided Design

by Erl Teichroeb

## General Overview

Computer-aided design (CAD) has come a long way since the first primitive workstations of 10 or 15 years ago that cost as much as a house. In fact, today you can have a much more advanced CAD station for under \$3000. Low-end CAD software that sells for \$500 or less is now at the point of providing very professional drawings.

The first CAD systems were basically a computer replacement for draftspeople, but they were too slow and simplistic to be taken seriously. With time CAD became more speedy

and efficient and moved into the realm of the personal computer. AutoCAD was the first to do a good job of this and is thus the most widely used CAD program by far. There are now over 50 CAD programs available for the IBM and the Mac, and most of them can do things draftspeople only dreamed of.

Think of how word processors or spreadsheets have eased manipulation of text and you get an idea of how CAD can help you with drawings. But just as you still have to enter all the text by typing it in initially, so you also have

## CAD

Continued from page 53

to produce the original drawing; you still have to sit down and take the time to draw that line or circle, which can take as long as doing it by hand. The advantages emerge later when you begin editing and revising the drawing.

Rather than having to re-trace the floor plan for electrical or plumbing layouts, you simply use different layers (see below) or copy the floor plan to another drawing sheet. Electrical or structural drawings are best suited to CAD because of their use of schematic symbols and repetitive lines.

The use of CAD for architectural or mechanical drawings depends on what type of drawings your company produces. Architectural details can be produced, saved, and re-used for each job and it's a simple matter to make changes to them. Or, for example, the layout for a 20-storey high-rise can be copied from one drawing sheet to another instead of having to re-trace every time.

Mechanical and civil engineers might benefit from the precision

attained only with a computer or from some of the 3-D packages available.

One more reason people are moving into CAD is simply for the professional-looking drawings. You can produce extremely accurate drawings with perfect linework and lettering, and by using a certain type of vellum (paper) and plotter, you can easily make

changes by pencil if you don't want to go to the time and expense of re-plotting.

## General Features

All CAD programs should have certain features similar to the following:

- An x-y axis (and z for 3-D) and some sort of snap/grid system so you don't always have to key in the length and angle of every line, arc, etc, but rather can 'eyeball' it with your mouse or digitizing tablet. (A snap is like having a magnetic point for which you set the range of effect)

- Layers, or levels that allow you to organize your drawing as in overlay drafting (a series of transparent drawing sheets on top of one

# TWINS

Even twins have their differences. So don't be fooled by their looks. For inside these two, is a world of difference!

On the left is the LOGI 386SX Laptop. The world's first and only 386SX laptop that can be upgraded to a 25386DX!

On the right is a LOGI 25386DX Laptop. The world's first ever laptop to incorporate a 32K Cache Memory for superfast, no-nonsense computing. With a boosting RAM memory as big as 16MB.

Then again, as all twins, they share a world of similarities too...Like the unique screen-enhancing feature — "Fleximap". By pressing the SHIFT keys simultaneously, the

foreground and background contrast can be dramatically improved to generate unprecedentedly crisp displays!

And both have the unique versatility to accept a wide range of hard disks — 40MB, 80MB, 100MB, 200MB and 300MB.

In fact, the twin's powerful features are quite generic. They were born the perfect substitutes for your desktops.

So, the next time you're thinking of upgrading your 286 or 386SX desktop PCs, put portable power on your desk instead.

Make sure it's LOGI's twin-power!

## CAD

another). For example, you can put your walls on one layer, your windows on another, and your dimensions on a third and then work on each layer separately and plot your drawing using a different pen thickness for each layer.

- Graphic entities (also called primitives) such as lines, arcs, circles, etc.
- Manipulation commands such as copying, scaling, rotating, etc.
- Editing commands that allow you to trim, extend, stretch erase, etc.
- Some way of moving around your drawing by zooming in or out, panning (moving across) or similar means. This is very important because it can get somewhat frustrating to be working on a large complex drawing on a small computer monitor.
- blocks/components (basically small, often used drawings or symbols) that will be repeatedly brought into the drawing

- Some sort of dimensioning menu. If there is one area of CAD that still needs work it is dimensioning. Associative dimensioning (which changes the dimensions automatically to reflect changes to the drawing) has certainly helped, but CAD is still waiting for that dimensioning program that makes computer dimensioning as easy as hand dimensioning.

- Utilities such as file and plotting menus. You should also be able to create DXF files (the most commonly used conversion utility), which allow IBM-produced CAD drawings to be compatible with other CAD software.

This list is by no means all-encompassing but it does represent features that every CAD package should provide and that should be compared when checking out different software.

### Low-end vs High-end

CAD software is divided into two very general groups; high-end and low-end. High-end CAD starts at about \$3000 and goes up from there. These programs are quite complex and it usually takes quite a while to master the program. Also usually included is a fairly advanced programming language so that you can tailor the program to suit your needs.

Most high-end CAD systems also offer a 3-D program, but you have to check if it is included in the program or whether it is a separate module for which you will have to pay extra. If you are interested in doing some computer modelling these 3-D packages are quite impressive, especially when you add some shading and a perspective view.

Low-end CAD sells for around \$500 and under. A few years ago no serious CAD user would have considered these packages but that has certainly

changed. Recent versions of the 2-D section of some low-end CAD packages have menus and commands that rival their more expensive counterparts, although without many of the more advanced features. They can, however, still produce nearly the same end result. Learning curves tend to be shorter so you can be producing professional drawings in very short order. But instead of an advanced programming language, most low-end packages make do with macros, which allow you to string together a series of commands which can then be initiated with a single keystroke.

Low-end CAD companies are also starting to offer some fairly advanced 3-D packages that, although they can't emulate high-end CAD, are very capable of producing professional looking models.

### Hardware

Hardware needs will also dictate which CAD program you will end up buying. Some low-end CAD packages will work on an inexpensive 286 with 640k memory and gray-scale monitor. The more costly high-end CAD systems need a fast 386 with lots of RAM to run properly. You will also have to consider buying a color monitor so that you can apply different colors to layers or line thicknesses to be able to differentiate between them on your monitor.

Most CAD programs also need a math co-processor without which the program would simply be too slow to use. This is because CAD stores endpoints of lines or arcs and calculates the distance between them (known as the vector format), as opposed to most paint and draw programs, which simply store the position and color of a specific pixel (known as raster), thereby involving a lot of numerical processing.

You will need either a mouse or a digitizing tablet of some sort. A mouse works well with most high- and low-end CAD and is considerably cheaper than a tablet. A digitizing tablet allows you to do more efficient tracing; as well, it provides a visual means of inserting blocks, but keep in mind any function on a tablet is also available through menus and/or a mouse.

You will need some sort of output device, usually a plotter, although many printing companies in town provide a plotting service if you can't afford a plotter yourself.

This is by no means a completely comprehensive review of CAD but it is very helpful to have some sort of an understanding of CAD and its relationship to drafting before you go out and chat with the salespeople.

## M.I.S. Information

"The computers are down."  
 "The copier is jammed."  
 "The fax isn't faxing."  
 Common problems.  
 Just part of business, right?  
 Wrong.

## Stop Invisible Problems

The fact is that anytime consuming problems that are associated with today's microprocessor based equipment are related *directly* to electrical disturbances...fluctuations in power that send you, the MIS manager, on wild goose chases...checking hardware and software problems that don't exist. Consequently you spend countless hours debugging software that doesn't need debugging and swapping hardware that doesn't need to be swapped. The result is millions of dollars wasted in lost time and productivity. Simply put...electricity is stealing your time!

## Safe Operating Parameters Defined

Having recognized this problem, the Computer and Business Equipment Manufacturers Association (CBEMA) has developed a "safe operating envelope" that defines the power parameters for safe, trouble-free operation of computers and other business equipment. When harmless power surges and spikes fall under the CBEMA Curve, equipment will operate as it is designed. When power fluctuates outside the parameters of the CBEMA Curve, problems and failures occur.

## ESP Guarantees Clean Power

Electronic Systems Protection (ESP) has developed an advanced level of technology that effectively "filters" electricity to protect equipment and

prevent "power related" problems. The ESP power filters are the only filters available today that comply with the CBEMA Curve "operating envelope." Further ESP provides a comprehensive warranty that not only covers the power filter, but also promises to repair or replace any equipment properly connected to it that is damaged by power disturbances.

# Disk Punchers: are they safe?

by Graeme Bennett

If you use an AT-class machine with a 3.5" drive, or a SuperDrive-equipped Mac, you may have wondered what the difference between Double Density (720k for PC and 800k for Mac respectively) and High Density (1.44MB) disks is. Most people think that there are only two significant differences: price, and that extra little hole opposite the write protect hole. Now on the market are devices that promise to save you money by allowing you to use regular double density disks in HD drives. These products, essentially specialized hole-punchers,

are available by the brand names Disk Wizard (see figure 1) and Double Disk Converter. To use a regular disk in an HD drive, just cut an extra hole in the upper left corner, and initialize it with double storage capacity. Hmm. What's the catch?

There is an additional difference between regular and high density disks in the coating that magnetically stores your documents and programs on that disk. The magnetic bits in the coating of a 1.44 MB disk resists demagnetization more strongly than the magnetic bits on a 720k disk do.

Scientists measure this coercivity, or resistance to demagnetization, in oersteds. As it turns out, the coercivity of a 720k disk is 600 oersteds, whereas the coercivity of a 1.44MB disk is 720 oersteds. Because the higher density disk must pack the magnetic bits together much more closely, its resistance to demagnetization must be higher so that they don't demagnetize each other. Experts warn that hopped-up disks are more susceptible to data loss, a month or more down the road.

In *Chicago Computing*, George Demos writes that "for coercivity, the ANSI standard requires a minimum of 600 oersteds for high density drives. All major disk manufacturers produce their double density disks at no less than 600 oersteds. Therefore, while this more-or-less proves that the disk-punching technique works, the fact remains that the high density disks are rated at a higher coercivity level, hence, may be expected to suffer less long-term magnetic data corruption. Further evidence that the magnetic media is not, as some advertisements assert, "essentially the same" is the fact that I have personally tried to format name brand high density disks on regular-density drives without success. Whether bulk "no-name brand" high density disks are truly high density media is anybody's guess.

In our own tests, we had no trouble with disks hopped-up with Disk Wizard (aside from putting the disk into the device sideways instead of upside-down on the first try, leaving us with a useless but harmless hole in the wrong place). If you are feeling the bite of HD disk costs, perhaps one of these products is for you. Caveat Emptor.

Incidentally, disk punchers for single-sided disks (used by earlier computers such as the Commodore 64, Apple II, 8-bit Atari and other machines with single-sided disk drives), suffer from a different problem. Because they buy double-sided 5.25" floppy diskettes, the owners reason, why not use both sides? For that matter, even if a disk is only certified as single-sided, generally both sides are perfectly usable, with no difference in density, or coercivity.

To use the "other side" of a single or double-sided disk in their single-sided drive, budget-minded computerists simply take a hole punch or any number of handy gadgets that can cut a notch in the thin diskette material. The trouble is, inside a floppy disk's vinyl jacket, the actual magnetic diskette is sandwiched between two pieces of fuzzy material, similar to the tiny bristles of a Universal Lint Removing Fantastic Brush, or whatever those things they sell at K-Mart are called. The tiny bristles catch the dirt, dust and stray magnetic oxide particles and sweep them in the direction of the spinning disk. Unfortunately, when the would-be thriftster flips the disk over, the brushes are suddenly sweeping in the opposite direction, and all this debris becomes dislodged, and ends up you-know-where. Whups.

## Professional Multimedia Systems

# Visual BASIC

## The Zen of Being Dapper

by Thomas Fee

Product: Visual Basic  
 Publisher: Microsoft Corporation, 1 Microsoft Way  
 Redmond, WA 98052 (206) 882-8080 fax: (206) 883-8101  
 System Requirements: Windows 3 on a 286 or higher. Windows must be running in either standard or enhanced mode.  
 Price: C\$199

### A Tool for the Timid

**V**Basic introduces a nice touch with its short Blue Pages at the front of the Programmer's Guide.

After reading that and running the flashy on-line tutorial, I felt orientated and ready to easily create a fancy-looking application shell. To make it perform useful work, though, it is impossible to avoid the reality of low-down programming which is real low-down. Plan on spending 40 hours to install and getting to know the system.

For those experienced in another language, the VBasic language is very easy to pick up, since Microsoft provided a very readable intro to it. The advanced features are packetized into cohesive chapters following the

intro, which can be read on an as-needed basis. The manuals are inviting and replete with examples.

### For the Merely Lazy

The standard Windows Help provides a very complete online reference with plenty of examples which can be copied and pasted into your program.

The main weakness in the Windows Help system is the absence of a full text-retrieval strategy. It relies instead

## VISUAL BASIC

on pre-built hypertext links. There is an example containing the FloodFill function, for instance, tucked under the hDC topic. There is unfortunately no way you can search for FloodFill. In contrast, Help has a topic called "How To" which is an incredible list of anything you could possibly do—an altogether impressive use of hypertext.

I wished for a "Functions by Programming Tasks" table, though it is there in hardcopy in the Language Reference. It would be nice if it were online.

## Fools Welcomed

For both novice and experienced programmers alike, VBasic makes the initial stages of a project much easier than it would be otherwise by providing defaults and associative cues (all visual, of course) to jog the space between the ears. It is as simple as hustling the mouse around and dragging a bunch of stuff: buttons, combo boxes, and what not, into a containing window, which they call a "form," and you've got yourself a lame but live prototype.

Those who like programming by hacking will love the interactive, interpretive environment where explorations are nearly painless. It is not even necessary to declare local variables (thrilling, isn't it?). When you think you've got something that works, you can produce an .EXE run-time with a flick of the wrist.

## Big Boy's Think Twice

The down-side of this Nirvana is that large-scale development with VBasic may be questionable. For example, a form is not listable. It exists forever as a visual design to be manipulated exclusively within the VBasic development environment. This is bad news for serious software developers. To mitigate this somewhat, it is possible to choose to list out the VBasic code that operate on these forms, edit them, and reload them back into the VBasic environment.

Another potential problem is the speed of compute-bound jobs. For speed, Visual Basic uses the newer token-threading technology, joining other interpretive languages like Actor and Forth. Nevertheless, based on my crude tests, VBasic and Actor code run 12 times slower than C++ code.

## Room to Grow

The stock system provides a lot of functionality via pre-fab objects and methods, which form a friendly face over the pre-fab capabilities. A good case in point is that they make DDE (Dynamic Data Exchange) easy. An end-user, with a little bit of study and experimentation, can competently set up a DDE link with another one of his Windows application, e.g., Excel, that speaks DDE.

To really make the pre-fabs sing and dance, though, be prepared to earn your stripes as a VBasic technoid. Like me, you may even resort to finding and

using undocumented behaviors to make your application work just the way you want. As they say, "No pain, no gain."

If you need to go beyond the pre-fabs to tap into the extremities of the underlying Windows API (Application Program Interface), you would be wise to pass off that portion to a professional programmer. Even though you may have written some heavy Excel macros before, you should be aware that even experienced programmers find the underlying substrate challenging. Serial communications is one example that falls under this category.

## In the Cockpit

On a lighter note, working with VBasic is fun. The splittable Code Window is quite neat and I found the automatic formatting and name fix-ups entertaining. I particularly like the ease with which I can get to the relevant part of my program merely by double-clicking on an object.

Yes, I have a few grievances. The Immediate Window, where interactive Basic is typed in, could use a lot more functionality. Same for the Code Window. I wish I could turn off the instant syntax checker since it interferes with my edits. There are faults with the project save procedure. I can't: 1) create a directory, 2) back up my project, nor 3) access my usual projects in an efficient way.

## Power Trips, Anyone?

Although the manual (p. 1/380) says that a Windows API prototype file is included, it wasn't there. To do serious programming, it is necessary to buy the Windows SDK (Software Development Kit). Although the SDK books are available at bookstores, they refer to symbolic constants which are only defined in the SDK's windows file. Microsoft can score a substantial coup if they can roll QuickC into Visual Basic so that the power programmer can create custom DLLs (Dynamic Link Libraries) on the fly. These power packs can tremendously enhance your effectiveness, particularly since accessing DLLs from VBasic is dead easy.

In conclusion, though Visual Basic is extensible, via custom controls and DLLs, it provides no mechanism for working with abstract as opposed to concrete (visual) objects. This will hamper the development of an aftermarket for extensions. Aside from buttons and boxes, you do need things like collection classes, dictionaries, and streams. Another obstacle to third-party extensions is that they will have no way to extend the stock Help with their on-line documentation.

Thomas Fee offers consulting and training in object-oriented technology. He believes in freedom of expression and life after death. (604) 682-6590.

## POINT-OF-SALE

# POS Systems: a Case History

by Graeme Bennett

Back in 1988, Strider Computer Centre installed a point-of-sale (POS) system into its stores. *The Computer Paper* spoke with Strider President Gord McOrmand on how the system had worked out.

TCP: Why did you initially consider going to a point-of-sale system?

GM: Basically, because inventory control was one of the major difficulties we had. We wanted a system to track stock and facilitate timely reordering. We also wanted to set up a customer base and effectively track receivables.

TCP: How many terminals are you currently running on the POS system?

GM: We have seven or eight. They're mostly XT's, but AT's would have better performance. It is running on Novell, which has been very reliable.

TCP: How much time does it take to maintain the POS system?

GM: The actual POS system takes almost no time. What does take time is cleaning up old inventory items, duplicate customer files, correcting data entry errors and whatnot. We have to go in and clean out the old files and errors or eventually it turns into a monster.

TCP: What were the most troublesome problems in getting the system up and running?

GM: Aside from the actual inventory—having a starting point

where you're actually alive and the system reflects. We found it easiest to just enter the codes and then do a manual inventory count.

Now, when we count inventory, we don't even shut the store down, we just do one section of the store at a time.

Integrating it with our AccPAC accounting system was, uh, challenging. There is a new module that does it automatically, but we don't use it yet.

RPlus was not the first POS system we tried. We had a different one a year earlier but we scrapped it. The person from the company we got it from didn't set it up correctly, and in our case, and probably that of most other retailers, we didn't then have the time or expertise to configure and maintain it by ourselves. The person that sets up and configures the system is an essential component of a POS package. RPlus has been updated three times, and we've been quite happy with it.

TCP: In retrospect, has the POS system helped your business?

GM: Absolutely, without question. It was a lot of work, but otherwise we wouldn't be able to do the kind of order and inventory tracking we do. It does all my order entry. Any kind of retailer should consider the value of that.

Contact: Gord McOrmand, Strider Computer Centre 594-5422.

"Thanks again HELP Payroll, for even more flexibility without complexity."

## HELP Canadian Payroll remains one of Canada's best selling payroll packages with:

- An extremely simple & user friendly interface
- Free telephone support and no yearly maintenance fee
- Flexible with 10 definable earnings and 10 definable deductions
- Complete with T4's, ROE's, Receiver General cheques, etc.
- Integrates with major General Ledger packages
- No limit to the number of employees and companies
- Over 1200 active users
- F1 Help - for every prompt!

Still Only \$349<sup>95</sup>

## POINT-OF-SALE

# A POS Resource Guide

by The Computer Paper Staff

We began researching this article as we do many others—by calling around to find out what's popular; what people think about the products. However, it soon became apparent that the more dealers we spoke to, the more products were mentioned. Unbelievably, there is almost no product that has "cornered the market," and become any type of industry standard. Therefore, rather than focus on one or two products, we present a guide to what's available. Each entry consists of contact information, pricing, system requirements and a summary of key features.

### Abacus II

**Software developer:** Comsoft Inc. 208,  
10335 - 172 St. Edmonton, AB T5S 1K9  
(403) 489-5994; (403) 486-4335

**Local distributor:** Tritech Computers,  
8823 - 120 St. Delta, B.C. 597-4777;  
T.L.D. Computers Unit 150, 5815 No.3  
Rd. Richmond, B.C. 273-4700

**Base price:** \$3,495 incl. Abacus II  
Inventory

**Optional costs:** Cash drawer, scanner,  
slip printer, if req.

**System requirements:** 80286, 640K, HD  
**Demo version available/cost:** \$250  
refundable towards purchase

**Key features:** Has a fully configurable  
system set up, integrates with the AR &  
inventory modules, allows  
single/multiple users per work station,  
accommodates most mfrs. cash drawers,  
fully supports GST set up in customer  
records etc., calculates change due on  
cash sales, records a check validation  
no., stores the credit card no. & expiry  
date on file.

### Bar code scanning equipment

**Software developer:** Real Data Systems  
120 - 1575 West Georgia St., Vancouver,  
B.C. V6G 2V3 683-7226

**Key features:** Works with any software  
package. Co. also supplies mag. card  
readers, bar code label printers &  
handheld computers for stock counting.

### A.M.S. Advanced Management Software

**Software developer:** Arete Technologies  
Inc., 3168 West Broadway, Vancouver,  
B.C. V6K 2H2 731-0592

**Local distributor:** Arete Computers,  
same as above

**Base price:** \$3,000

**System requirements:** DOS 3.3 or  
higher

**Demo version available/cost:** \$80

**Key features:** Point and select, inventory  
control, AR, A/P G/L, commission,  
purchase orders, Software made easy.

### DC 4 Poll / DC 4 Link

**Software developer:** Sweda Canada Inc.,  
4700 Dixie Road, Mississauga, ON L4W  
2R1

**Local distributor:** same as above

**Base price:** \$2,500

**System requirements:** 286, 640K

**Demo version available/cost:** no

**Key features:** Polls data from register to  
head office, sends price changes and E-  
mail to store, produces daily reports at  
head office, interfaces to results  
inventory & acctg. modules, as well as  
other soft goods packages, interfaces to  
ACCPAC in French & English.

### Easy Retail

**Software developer:** Hands On  
Computers, 1422 - 128A Street, White  
Rock, B.C. V4A 3X4 538-1719

**Local distributor:** Lingo Computers,  
Amazing Innovations Company, Inc.

**Base price:** \$370

**Optional costs:** none

**System requirements:** PC - AT, printer,  
hard disk

**Demo version available/cost:** call

**Key features:** Full systems without  
accounting features.

### Easy Retail Version 3.0

**Software developer:** Verne Frazer, 1422  
- 128A Street, White Rock, B.C. V4A  
3X4 538-1719 FAX 535-9053

**Local distributor:** as above and Super  
Software

**Base price:** \$299

**Optional costs:**

**System requirements:** HD 286 or  
higher

**Demo version available/cost:** \$15 plus  
taxes for shipping & handling

**Key features:** Cash: prints out daily cash  
summary & compares it to actual  
deposit, prints daily report of sales  
sorted by receipt no./payment method.  
Inventory: list of all new products,  
actual outstanding/recommended  
order report, allows inventory history.  
Sales & payments: individual employee  
sales for any period, summary of all  
sales/employee hours worked/profit  
margin for any given period, small

## IBM COMPATIBLE SOFTWARE

SIM-COM Services is an approved vendor of the Association of Shareware Professionals (ASP). This enables us to distribute Software by many of the BEST Shareware authors, as more and more ASP members permit distribution by ASP Approved vendors ONLY. Sample programs available only from ASP approved vendors:

### BUTTONWARE, INC.

PC-File 5 (a database), PC-Calc (a Spreadsheet), PC-Type (a wordprocessor). All data files can be merged or imported/exported to each other. Stand alone programs or use like an integrated program, but with many, many more features and capabilities.

### RK WEST CONSULTING

Fortune Teller, Tarot, Mayan Calendar, Geomancy, Aura reading, I Ching and many other parapsychology programs. Poetry Generator, and Creativity Package for English creativity. Workbase for the clipper/dBase programmer. Citizen for more power and control of your Citizen printer. Curses, an insult or compliment generator for fun on your PC.

We carry in excess of 600 disks of programs, many archived to reduce the number of disks in a set. We are constantly updating our library with current versions, and new releases, dropping programs no longer supported, or out-of-date.

We have recently completed our catalogue-on-disk, and it is now available for \$3.00 (includes PST and GST). Current members may pick-up a copy free.

### Can't Find The Right POS? Neither Could We!

**So we developed AMS to suit our clients' needs. Here's what they say:**

A little over a year ago we were looking for a point of sale system to handle our very complex oil products business. It quickly became apparent that all the software on the market was geared to "uncomplex" business .... In addition, most programs were very rigid in their approach to POS and simply could not be adapted to our business.

...we needed a more diverse software that could handle our special requirements such as 4 decimal prices and discounts, keeping track of sales of consigned stock as well as resale stock, invoicing on behalf of two companies at the same time etc.

AMS ... does these special cases plus the standard run-of-the-mill POS tasks and with flexibility, like auto-markup or specified markup etc.

AMS has become a unique POS that can handle our routine and complex needs all in 'ONE' program.

Ken A. Sparrow

President, Boundary Oil Products Limited

# New Life for Old Macs

by Graeme Bennett

Product: NewLife 25MHz accelerator for Macintosh Plus  
Version: 4.4. System 7 requires new version due Sept. 1st.  
Manufacturer: NewLife Computer Corp., 603 March Road, Kanata, ON K2K 2M5 (613) 592-5080 or 1-800-663-6395  
System requirements: Macintosh Plus. Models available for Classic SE, 512KE, and upgraded older Macs.  
Price: C\$1099 (with 68882). Prices vary on other models—call for price list.

Figure 1. The NewLife Control Panel. This illustration shows the name "Newbridge Microsystems," however, the company has since changed its name to "NewLife." The new System 7-compatible software should be available by the time you read this.

The NewLife accelerator endows a Mac Plus with a 25MHz 68030 microprocessor and 68882 math coprocessor, resulting in a machine with the speed of a Mac IIci at a much lower cost. Of course, other benefits of the IIci, such as NuBus slots and color support aren't addressed by the NewLife upgrade, but if speed's what you want, the NewLife's got it.

## Installation

The first step of the installation is getting the Mac's case open and motherboard removed.

Because compact Macs were designed specifically not to be user-serviceable, a tool known as a torx wrench is required to open their cases. NewLife recommends that you have a dealer install the upgrade kit, and hence, doesn't include this tool, which resembles a very long Allan key. Fortunately, you can get this essential tool for about US\$8 from mail-order suppliers such as MacConnection (1-800-334-4444). Locally, I found one at Advantage Computers (604-299-3881) for C\$25.

Essentially consisting of a daughterboard that clips onto the Mac's motherboard by means of a solderless "Killy clip," the NewLife is fairly challenging to install. (According to NewLife's Canadian Sales Manager Marilyn Williams, the board can be soldered in place instead of merely clipping on. She told me installation is much easier in an SE.) Expect to pay about \$100 for your dealer to install the upgrade if you would rather not do it yourself.

Additionally, we added 4MB of RAM. NewLife's toll-free technical support proved to be knowledgeable and helpful, and told us that adding 80ns or 100ns RAM would produce 2 wait states. Adding faster (and more expensive) 70ns SIMMs would yield only 1 wait state. The 120ns RAM on the Mac Plus' motherboard can still be used. A total of 8MB can be installed—4MB as main memory and 4MB to be used as a RAM disk.

## Performance

Although many seasoned computer technicians have a justifiable mistrust of clip-on CPU upgrades, the NewLife appears to be a well-constructed, reliable product.

Here at *The Computer Paper*, our national sales rep John Oliver used the NewLife-enhanced Mac for a couple of months. He reports that "it did seem reliable, with very few bombings for ANY reason, and it went through the really busy part last month with all of us working on the database off my drive. And it was REALLY fast." Says John, "The SE-30 that I'm working on now is noticeably slower by comparison."

## Software

Software included with the board consists of a Control Panel device (see Figure 1) that controls various configuration options, such as turning on and off instruction and data caches, and patching the system's sound and

## Intelligent Monitors.....

NANAO believes an intelligent monitor should be a multi-functional and easy to operate business tool. It's NANAO's quality monitors that provides the busy professional user with an ideal workstation environment.

The microprocessor-based digital control system memorizes picture adjustments for different signal sources; which are recalled automatically when needed. This flexible and easy to operate design makes the NANAO monitor your best partner.

All of their monitor's are designed with an optimum selection of components creating a superb image, higher contrast, sharper images, and a brighter screen.

Dynamic Beam Spot Control is used to provide the best possible focus, both

in the corners and in the centre.

## Safety First.....

For most office equipment, the issue of safety is vital. Proper design therefore is required to provide a safe and comfortable

operating environment while providing a high quality display image. NANAO has invested in extensive research and development for eliminating hidden drawbacks. Electromagnetic radiation leakage has been dramatically reduced by a special coil and sealing - (Low Magnetic Radiation). Static electricity has been reduced by a special coating on the CRT surface - (Anti-Static Electricity).

## No Flicker.....

Most monitors say they'll do certain

resolutions. NANAO not only promises high resolution, they also deliver - without the flicker. Flicker causes eye strain. Eye strain can cause headaches and exhaustion. All leading to an unenjoyable day at the office.

## See The Future.....

Are you aware that a monitor isn't just a simple device for displaying information? Successful business people know how to select and use a good monitor. They know how important it is to their business to pick the right monitor. All you need to do is just take one look to realize the value of NANAO monitors. They are designed and equipped with the user in mind. NANAO's technology always leads in the visual electronics industry because they keep seeing the future in product design and manufacturing.

# NANAO<sup>®</sup>

## SIMPLY THE BEST.

#102 - 3850 Jacombs Road Richmond, B.C. V6V 1Y6 Tel: (604) 278-2893 Fax: (604) 278-2861  
Authorized Distributor for NANAO Video Display Terminals & Other Fine PC Products & Peripherals

## NEWLIFE

AppleTalk drivers for proper operation. Although the current version does not work with Apple's new System 7 software, NewLife told us that a System 7-compatible update will be released by the time you read this.

Other software features include a crash-resistant RAM disk, redirecting SANE (standard Apple numeric environment) calls to the 68882, and copying the Mac Plus' ROM to 32-bit RAM for faster performance of ROM-based operating system calls. Despite the fact that the NewLife equips the Mac Plus with a 68030 with built-in PMMU (paged memory management) chip, it remains unable to take advantage of System 7's "virtual memory" feature, due to the fact that Apple's implementation requires Toolbox functions not present in the Plus' 128K ROMs. Fortunately, a third-party VM product called Virtual from Connectix (415-324-0727) supports VM—even on 128K ROMs, as long as a 68030 is present.

A Connectix tech support rep said that Virtual has been adapted for virtually every accelerator product on the market, with implementations for Novy (who's name is on the NewLife software), Mobius, Dove's Marathon accelerators and others, including original Mac IIs upgraded with a 68851 PMMU chip. Although at this writing, Virtual is not System 7-compatible, he said versions of Virtual for upgraded Mac Plus and SE computers running System 7 should also be ready by the time you read this, with implementations for other 68030-based machines slated to appear by October.

### Conclusion

If you had resigned yourself to putting that old Mac out to pasture in favor of this year's model, consider these accelerators as a cost-effective alternative. If you don't need the color, audio input capabilities and other bells and whistles of today's modular Macs, you can give your current machine a whole new lease on life.

## HITACHI CD-ROM

*Continued from page 52*

Despite the complications of disc insertion, the dust-cover flap over the door of the CD slot is probably a good idea (considering that so many CD-ROM drives fall victim to dust-related problems), although we'd rather see a soft-touch, slow-closing door system (like those found on better cassette decks and, ironically, virtually all audio CD players) rather than the flimsy spring-loaded affair on this unit.

On the back of the drive are two SCSI ports. Unlike every other SCSI

device we've ever seen, the Hitachi's ports are misleadingly labelled IN and OUT, as if they are not interchangeable (they are). To its credit, though, the manual correctly identifies the two ports as identical. It also includes a good description of how to set the SCSI ID and internal termination switches.

### Conclusion

Remember that specs aren't everything. Despite the fact that this drive is easily the fastest drive we've ever tested, its ergonomic eccentricities and

the fact that data from some discs doesn't load properly significantly alter our perception of it as a product. It is hardly acceptable to recommend a drive that apparently can't load certain types of data. In this case, slow and steady wins the race.

# Charles Moore

By Roedy Green

## Interviewing Galileo

**H**ave you ever wondered what it would be like to go back in time and interview the great innovators like Galileo or Leonardo da Vinci?

**N**ext month, I will get a chance to interview Charles Moore, our age's equivalent computer iconoclast. You can get to hear him too, because he will be coming to

BCIT on September 19. Moore created Forth, a radically innovative computer language. He also designed \$150 RISC computers that run at 200 to 500 MHz. By comparison the fastest 386 is only 33 MHz.

## How I found out About Moore

You probably have never even heard

of Moore. I hadn't either until 1979. I was working with Dr. John Lilly at the Human Dolphin Foundation in California. We were working on Project Janus to make ultrasonic sounds underwater to dolphins and analyze their responses using a mathematical technique called Fast Fourier Transforms.

I arrived all prepared to write computer code in DEC PDP-11 assembler, but Lilly explained he wanted me to use a new language called Forth. The language was totally weird. It had no equivalents in any of

the computer languages I knew already. Charles Moore was its creator.

I learned only a few "words" of this strange new language, and overnight I created an electronic Etch-A-Sketch that let dolphins draw, using ultrasonic whistles to control the pen.

I could not believe how quickly I could produce results with Forth. I then went back to Vancouver and set about creating my own Forth-based database language called Abundance. I use it for writing custom charity applications.

## What Is Forth?

Some people call Forth a religion, because its adherents are so fanatically positive about the language. I think of it as a toolkit to build your own computer language custom-tailored for the job.

In the magazines you will hear about C, Pascal, Ada and Smalltalk, but you will rarely hear about Forth.

However, you have probably used programs written in Forth without even knowing it, e.g., Ashton-Tate's RapidFile, VP Planner and Peachtree accounting.

Forth shines in interacting with the real world. For example, Bell Canada uses it to handle network troubleshooting. Forth controlled the models for the battle scenes in Star Wars. It runs the Skycam used in football games. It even grades and sorts peaches.

## The Chips

When it came time to implement Forth on existing computers, Moore was dismayed at how much dithering they do. They might take perhaps six instructions to accomplish what you would think of as a simple Forth operation such as adding two numbers.

So he decided to redesign computers so they would get on with it, and do elementary Forth operations in a single step. He went even further, and discovered he could sometimes get computers to do four or five operations in a single step.

To compose comprehensible computer programs, you must break them into tiny pieces. A traditional computer wastes huge amounts of time in the CALL mechanism, i.e., shifting attention from one piece of the program to another. Moore found new ways to slash this overhead.

Moore takes a deep approach to problem-solving. He is not content just to make a minor improvement to what has already been done. He is willing to start over completely from scratch looking for the simplest, cleanest solutions.

## Where and When

Come see him, if only to be able to tell your grandchildren. In time, I think we may consider him the Einstein of our age. He will be at the Forth BC Users' Group meeting at BCIT room 1A-324 on September 19 at 7:30 PM and at the SFU Engineering Department September 17. For details call 526-9864 or 980-9991.

# "The Tools Are Only As Efficient As The Hands Which Employ Them"

A person with hammer is not necessarily a skilled craftsman. A person with a computer doesn't necessarily work more efficiently. Skills and efficiencies are learned.

Advantage Computers Ltd. provides a variety of training courses on the Apple® Macintosh™. Courses which range from introductory Macintosh user training to advanced M.I.S. support. From technical networking to high-end graphics... our classes are tailored to allow anyone to be more efficient with their Macintosh.

The Advantage Training Group specialists will customize courses to the client's specific requirements. They are prepared to deliver the training in Advantage Computer's fully-equipped training centres or at your site... anywhere in BC.

For course schedules and details, call your nearest training centre.

## Lotus Updates 1-2-3

CAMBRIDGE, MASSACHUSETTS, JUL 18 (NB)—Lotus Development has updated its top DOS spreadsheet product. The new 1-2-3 for DOS Release 3.1+ is available immediately. Lotus also reported a large drop in net income in the second quarter.

1-2-3 for DOS Release 3.1+ brings most of the same features to Release 3.1 that Release 2.3 added to those of Release 2.2. Release 3.1+ includes a file-viewing feature based on the technology used in Lotus' Magellan disk management software, as well as added spreadsheet auditing capabilities, both of which were introduced in Release 2.3, spokesman David Allen told Newsbytes.

The new release also includes Lotus' Solver technology, previously available only in 1-2-3/G for OS/2, and the Lotus DataLens driver for data exchange with Borland International's Paradox database software.

1-2-3 for DOS Release 3.1+ requires an IBM or compatible PC with an 80286 or higher microprocessor, a hard disk, one megabyte of available system memory and DOS 3.0 or higher. For the what-you-see-is-what-you-get (WYSI-WYG) display, 1.5 megabytes of memory is recommended. Solver requires three megabytes of memory.

The suggested retail price of the 1-2-3 for DOS Release 3.1+ Standard Edition is US\$595. The Network Server and Node Editions of the product will be available within 30 days at suggested retail prices of US\$895 and US\$595, respectively. Dutch, French, German, Italian, Spanish and Swedish versions of Release 3.1+ will also be available this quarter.

Anyone who bought or upgraded to any PC version of 1-2-3 since March 1, 1991 can upgrade to Release 3.1+ for a suggested retail price of US\$49, Allen said. Anyone who bought or upgraded to Release 3.1 since January 8 is eligible for the same offer. All other 1-2-3 users can upgrade for US\$150.

Contact: Alexandra Trevelyan, Lotus, 617-693-1580; David Allen, Lotus, 617-693-8687.

enters a person's last name, Packrat will look up the person's fax number and insert it automatically in the Winfax send screen.

This capability required creation of special macros in both packages, Zancowicz said. DDE opens a number of other possibilities for packages to work together.

Mark Gavin, product manager for Winfax Pro, told Newsbytes Delrina is exploring a number of possible ways of taking advantage of DDE. For instance, he said, a database of names and addresses in Microsoft's Excel spreadsheet software could be merged with a letter created in Word for Windows and then sent out by fax using Winfax.

 **Ashton-Tate®**

has experienced a five-fold increase during the period from 1981 to 1989. As a result, around one in 500 U.S. workers now suffers from the injury, which affects both blue-collar factory workers and white-collar clerical workers.

The injury, which can result in permanent disability, occurs when a highly repetitive task involving limited wrist motion causes a strengthening of the muscle at the base of the wrist. The situation is made worse by inflammation at the site of the injury.

These two actions together cause a thickening and pinching of the bundle of nerves which pass through the 'tunnel' formed by the structure, pinching the nerves, so resulting in pain and weakness of the hand and wrist.

Some workers have had surgery to open up the restricting sheath, which may provide a degree of permanent relief from the pain.

Unions, from the AFL-CIO to the United Food & Commercial Workers International, are now requesting the emergency regulations which would specify just how employers must adjust working conditions to eliminate or reduce the stress that is thought to cause the problems.

Serving Vancouver Since '87

tion market—a low-end machine complete with three-dimensional capabilities, called the IRIS Indigo.

The Indigo includes a color monitor, high-quality CD-audio and video features with microphones included and a base price of \$7,995 for 8 megabytes of RAM.

The distinction between the high-end personal computer and low-end workstation markets is becoming more blurred every week. The next large market boon is seen to be this niche market of low-priced graphics-oriented machines.

Edward R. McCracken, president and chief executive officer of Silicon Graphics, said: "The PC and workstation worlds are converging. Out of this fusion, a new type of product will emerge—the RISC personal computer."

Reduced instruction-set computer (RISC) microprocessors reduce the number of instructions performed by the processor, which speeds up operations of the desktop computer. A MIPS RISC processor powers the Indigo.

The release will be a shot in the arm for the ACE (Advanced Computing

Environment) consortium, which consists of major software and hardware vendors all hoping to stake a claim on developing RISC technology. Silicon Graphics is one of the members. Other members include Compaq Computer Corporation and Digital Equipment Corp. ACE was formed to compete head-to-head with workstation leader Sun Microsystems, and the number two company, Hewlett-Packard, for future market share.

Apple recently threw its hat into the workstation ring with IBM by signing a letter of intent to develop future RISC

technology based on IBM's RS/6000 technology.

One of the biggest advantages of the new product, apart from its comparatively low price, is that it not only supports current software designed for the Silicon Graphics' platforms, but will also be compatible with future operating system software being developed by ACE, should that consortium succeed in its intention of producing future products.

Adobe Systems has already shown support for the new product by announcing that a version its Adobe Illustrator will be available for the IRIS Indigo personal computers sometime in 1992. Autodesk will be releasing a version of AutoCAD for the Indigo. Other products announced and under development for the workstation are from top companies: Wordperfect, Spyglass, BioCAD, Time Arts, Interleaf, and Informix.

Silicon Graphics first licensed Adobe's Display PostScript system in October of 1990 and the IRIS Indigo is the first Silicon Graphics product to support the technology.

Adobe claims that with Display PostScript system, IRIS Indigo users will have access to a true WYSIWYG computing environment, since the images viewed on workstation displays will precisely match the output from PostScript printers.

High-end workstations sell for as much as \$80,000. Indigo public relations manager, Betsy Wahlquist, says the Indigo will be capable of performing the same special effects that high-end Silicon Graphics workstations performed for the film "Terminator 2"—only at a slower pace. The Industrial Light and Magic production company created scenes in which a character was metamorphosed, for which the firm has won critical acclaim, on the Silicon Graphics' \$50,000 graphics workstation.

### NeXT Computers Posts Huge Sales Increase For 2Q

REDWOOD CITY, CALIFORNIA, AUG 2 (NB)—NeXT Computers has surprised many in the computer industry by announcing that revenues for the second quarter ended June 30, 1991, reached \$46 million, an 86 percent increase over the prior quarter.

Alison Thomas, spokesperson for the company, told Newsbytes that the results showed that NeXT was a "growing company whose technology is now more widely accepted."

According to the company, 70 percent of its workstation products went to customers in business and government, while the remaining 30 percent went to colleges and universities. Additionally, Europe and Asia accounted for more than 49 percent of sales.

The company said that revenues for the quarter came from sales of NeXTstation and NeXTcube, which began shipping in November, 1990. Additionally, the second quarter was the first full quarter of shipments of the

## NEWSBYTES

NeXTstation Color, which began shipping on March 12. The quarter also included initial shipments of NeXTdimension, the company's new 32-bit color PostScript workstation, which began shipping May 28. All four machines are powered by Motorola's 68040 microprocessor.  
Contact: Allison Thomas, Allison Thomas Associates, 415-780-3786.

### Frame, Sun Approach Small Publishers

LOS ANGELES, CALIFORNIA, AUG 14 (NB)—Small publishers are receiving an offer from Frame and Sun Microsystems for a Unix-based Sun SPARC station desktop publishing system that costs the same or less than a comparable IBM personal computer (PC) or Macintosh computer system.

The companies claim that several publications are switching from their current equipment and moving to the Sun/Frame combination for everything from in-house newsletters to magazines. Frame points to Bear Stearns, a Wall Street firm who purchased its desktop publishing product FrameMaker and is now using it for all the company's manuals, as an example.

Programmer Raj Punderika of Bear Stearns estimates that his manuals now take less than one-third the time to prepare—a single man-week as opposed to three man-weeks.

Frame said that its customer profile is starting to include administrative assistants, secretaries and word processing operators, because the Unix operat-

ing environment has pull-down menus and self-help, so even unfamiliar users get up to speed quickly.

Sun claims that sales of Unix-based workstations and servers for electronic publishing are 13.4 percent of the present total market representing \$762 million in revenue. The company estimates that the Sun workstation accounts for nearly half of all the workstations used for electronic publishing.

Sun also touts the variety among software vendors and commercial publishing vendors who support the Sun SPARC station. Lotus Development, WordPerfect, Xerox, Kodak, Ashton-Tate, Frame, Agfa/Compugraphic, Dupont, Pre-Press Technologies, Linotype, and Raster Ops are just a few of the vendors Sun mentions.

Sun is claiming that standard PCs and Apple Macintoshes are underpowered for editing large color images, and points out the Sun workstation can be interconnected to the PC or Mac.

Sun is offering a free video tape—"Meeting Today's Document Publishing Challenges"—that explains the benefits of the technology to potential customers. The tape is being issued free of charge until August 31, 1991.

Information on how to obtain the tape is available by writing in care of the Publishing Manager, Sun Microsystems, Inc., PO Box 5164, Denver, Colorado 80217-9343, or by calling (800) 695-1601.

Contact: Whitney Greer, Sun, Tel: 415/336-0598, Fax: 415/336-3880, Kristin Vais, Frame, Tel: 408/954-3921, Fax: 408/433-1928.

## Educational Software

### The Heart of Educational Change

by Stewart R. Ladyman, Superintendent of Schools, School District No. 15 (Penticton)

As we enter the Information Age at an accelerated pace, it is imperative that educators and parents ensure that the software being introduced and used in the home and at school is beneficial to learning.

Technological changes in the past six months at the hardware and system levels are providing software developers with an opportunity to develop creative packages. We must never lose sight that the technology is a tool to improve the way we live, learn and work. We must also realize that we are part of a global village and we must be able to communicate to a variety of audiences.

Technology will become commonplace in our homes in the near future. Educational software will allow people to learn at both younger and older ages in ways we have not even thought about. The advent of voice, data and video will also change the types and ways we use software. Besides the telephone, in the near future we will learn and communicate using satellites, the FM band, lasers, infrared

and other electronic tools. The educational software will be a crucial link to this technological explosion.

Educators will only benefit from technological advances if they can see that there is an improvement to the teaching/learning environment. Parents will want to have their children learn with technological assistance if it goes beyond the present "pen and paper" methods.

**"Educational software  
will allow people to  
learn at both younger  
and older ages in ways  
we have not even  
thought about."**

During the past five years a number of research studies have sought to answer the question "what and how do you expect children to learn from

computer instruction?" In analyzing the reports there appears to be a consensus emerging that the computer and its peripherals have a positive effect on teaching and learning.

This conclusion is only positive if the educational software has been appropriately designed. Many software packages are designed on an opposing philosophical base to the instruction in the learning environment. If you believe in a creative-thinking style of teaching,

you would not want educational software that is considered to be drill and practice. On the other hand if you are looking for reinforcement of a concept, then drill and practice software may be appropriate.

There are a number of basic concepts that developers and users of software must be cognizant of if we are all to take advantage of the technology.

- Are the skills and concepts consistent with the curriculum?
- Can the student use an open ended approach to exploration?
- Are there a number of ways to do the same task?
- Does the software allow time to plan or is it time-sequenced?
- Is there feedback to the student's response?
- Are the graphics clear, interesting and uncluttered?
- Is the reading level appropriate to the students' abilities?

Well-designed software offers students a way in which to think creatively and solve problems. Teachers should provide information and support but with minimal involvement.

Educational software can make a special contribution to special needs children's learning. The appropriate software will allow these students to express themselves in a variety of manners not previously available to them. Software can promote planfulness possibly at the expense of playfulness.

In the selection and developmental process three things must be considered:

(a) does the software allow for control of information so that key concepts are not missed?

(b) does the software ensure that there can be no misconception of what skill or concept is being taught?

(c) does the software account for student ability and time efficiency?

There are potential great strides to be made in the teaching/learning environments by using appropriate educational software. Effectiveness will depend on the quality of the software, the amount of time it is used and the way in which it is used. Educators and parents need guidance on effective programs to use and effective ways to use them.

As mentioned earlier, the field of technology is changing at a fast pace. Software developers will need to keep abreast of not only technological changes but also educational teaching strategies and philosophical shifts. Teachers and parents must be proactive in assisting with this development. If they know what the goal is, then they can assess if the software will meet that goal. Educational software must not be allowed to replace the teacher but software must allow the teacher time to develop other attributes and interests for the student.

Wouldn't it be ideal if all educational software promoted personal empowerment? When technology does all of our thinking we are doomed to extinction. Let's make sure that change is controlled by us and not forced on us.

## Learning How to Type

by Peter Noah

So, your friends, workmates, and family have finally convinced you<sup>2</sup> to buy a computer. Welcome to the club. You will have many hours of fun and productivity. Unfortunately there will be some frustrations involved and the first is that you have to be able to type.

As yet it is the only practical method of inputting information into a computer. Maybe in our lifetime we will have voice input, but right now it is possible only in the laboratory. What about the mouse, you may ask? Yes, we have the mouse, but it is only a pointing tool and so is useful only for selecting, not for originating information. What about "hunt and peck" typing, won't that suffice? Definitely not. The time wasted makes a mockery of your investment in a computer. No, you must learn to type and learn to type properly, but this is not as difficult as it sounds. It takes the average person roughly 30 hours to learn to type at a survival rate of 20 (WPM) words per minute.

### Courses

The simplest way of learning to keyboard is to take a course at a local educational institution, e.g., your local School Board, a community college, a community center, a business training school, or one of the larger computer retailers in your city. It will cost you roughly \$175, and as long as you show up, you will know how to beginner-level type at the end of the 30 hours.

### "Learn To Type" Programs

The above method is almost foolproof but if you are ironwilled or want to save money, you can buy a "learn to type" program for your computer. After trying out dozens of such programs my three favorites are as follows.

### Typing Tutor

**Product:** Typing Tutor IV Plus  
**Publisher:** Published by Simon & Shuster Software, New York. Written by Kriya Systems, Inc.,  
**System Requirements:** IBM PC, XT, AT, PS/2 or compatible, DOS 2.1 or higher, 5.25" or 3.5" floppy, or hard disk. Versions also available for Apple/Macintosh systems.  
**Price:** Cdn \$49.

The oldest and most successful "learn to type" program is Typing Tutor. It is excellent for beginners in that it uses menus and submenus to get you around (no memorizing). This program produces charts of your speed and accuracy on each key. For variety, it even has an arcade-quality game, called Letter Invaders, where the letters you have been practising drop from the top of the screen and you must type them

## WE PROVIDE AN IDEAL WORKSTATION FOR YOU 80386DX—33MHz Non-Cache System

### Features:

- Fast memory interleaving design — 80386 CPU at 0 wait state
- Built-in hardware EMS 4.0
- Expandable to maximum 32MB memory
- Low cost solution — no cache on board
- High Performance — Landmark 0.99: 48.9 MHz
- 1MB 70ns memory on board
- 1.2MB or 1.44MB Floppy Drive
- 45MB IDE Hard Disk Drive
- IDE Host Adaptor and Floppy Disk Controller
- AT Multi I/O with 2 serial, 1 parallel & 1 game port
- 101-Key AT Enhanced Keyboard
- Desktop Case with 200 Watt Power Supply
- Two year parts & labour warranty supported by manufacturer directly

**\$960**

### Video Upgrade:

- **VGA Package** — Standard VGA 8-bit Card with 256KB Memory and 14" VGA Colour Monitor 640x480 0.41mm d.p. .... \$298
- **Super VGA Package** — Super VGA 16-bit Card with 1MB Memory and 14" Super VGA Colour Monitor 1024x768 0.28 mm d.p. .... \$448

### 25MHz Will Keep You In Pace

RICHMOND

270 9001

Finally, the program is small, (1/4 MB), so it doesn't use much valuable space on your hard drive, or can be run from a floppy disk. Its one weakness is that the lessons are not divided up, so it seems to go on and on without a break.

### Mavis Beacon

**Product:** Mavis Beacon Teaches Typing

**Publisher:** Individual Software Inc.

**System Requirements:** IBM PC, XT, AT, PS/2 or compatible, DOS 2.1 or higher, 5.25" or 3.5" floppy, or hard disk. Versions also available for Apple/Macintosh systems.

**Price:** Cdn \$49.

Another good program is Mavis Beacon Teaches Typing. It is more personable in that it addresses you by name and gives you personal messages, like, "Excellent work Peter," or "20 WPM, I knew you could do it." It produces graphs showing your progress and gives you special drills on weak keys (something Typing Tutor does not as easily do). It has easy to use menus and has a moderately exciting game. Its one weakness is that the program is copy-protected. This means you must always have the original diskette close by for the random authorization checks the program makes. This is a nuisance, but upon request, the company will send you a version without this feature. Otherwise, it works like a charm.

### All The Right Type

**Product:** All The Right Type 2.2

**Publisher:** Didatech Software, Burnaby, BC; written by Beaucamp, Panon, and Shulman.

**System Requirements:** IBM PC, XT, AT, PS/2 or compatible, DOS 2.1

or higher, 5.25" or 3.5" floppy, or hard disk.

Versions also available for Apple/Macintosh systems.

**Price:** Cdn \$67.

## TYPING

All The Right Type is a good program, used for years in many school districts. It is a small program (1/4 MB) and simple in structure, but it is popular with the students and very effective. It is similar to a textbook in that you are presented with a kind of "table of contents" from which you select the letters you would like to practice. Letters you have completed are checked off. You can even pick a previous lesson and improve your score on just it. It also tells you that you are, for example, at line 8 out of 14 in the current lesson, so you know how long your lesson will take, something the other programs do not do. It is also convenient for your kids to have the same program at home as they have at school.

All The Right Type charts your progress but only on lessons, not on individual letters. Other disadvantages are, since it was designed for teachers, you must leave the program to setup or view your records (no big deal), and there is no game for some much-needed variety.

In conclusion, despite its weaknesses, because of its table of contents layout, that lets you manually pick the lesson you want to practise or improve your score on, of the three programs discussed, this is my favorite. It's a matter of personal taste, though, so ask to preview each of them at your software retailer.

### Costs

All these "learn to type" programs cost around \$50. (All The Right Type is \$67.) and are well worth it. A word to the

wise, though: don't mix the different programs while you're still learning, as they have different sequences for introducing the keys, and you could easily get confused. After you learn, you can buy one of the others for review or to correct any areas of weakness you may have.

### Other Notes

There are other typing programs that are valuable for either under- or over-achievers. Notable are the shareware programs: **PC Fasttype** for the slow-pokes, and **Typing Made Easy** for the speed freaks.

### Summary

To use a computer you must know how to type. Two ways of learning are "courses," and "learn to type programs." Three excellent "learn to type" programs are **Typing Tutor**, **Mavis Beacon Teaches Typing**, and **All The Right Type**. They are easy to use, are quick to learn (30 hours), and are inexpensive (\$50.-\$70.). Unfortunately, a problem with all "learn to type" programs is, that it is up to the individual to make time for them, and few of us are self-disciplined enough to do this properly. Therefore, if you are only normally self-disciplined or need to learn immediately, it is best to opt for the course. Courses are available in most communities, will take you approximately 20-30 hours, and will cost you around \$180.

Peter Noah is with the Vancouver School Board and teaches Keyboarding and Data Processing. He can be reached at 228-9926, for comment or discussion.

# Introducing the IRISVISION board set. Rocket 2D and real-world 3D for your PC.

### Take advantage of high-performance workstation graphics for your PC.

Get ready to put all your designs on fast-forward with the IRISVISION® board set from Silicon Graphics®.

The board set combines the Silicon Graphics Geometry Engine™ and six custom VLSI chips, to give you the most powerful PC graphics ever. Including the first real-time, real 3D computing environment for 386™ and 486™-based PCs.

It's easy to install and use; just plug the board set into two of your AT® or MicroChannel® slots, then prepare to see the world in a whole new way. IRISVISION dramatically accelerates your 2D designs, makes your wireframes move, and renders images in no time flat. Plus, its 3D capabilities give you the power to create and manipulate 3D designs in real-time.

For years, Silicon Graphics has been at the forefront of high-performance graphics. So it's natural that we're the first company to bring this enabling technology to PC users.

If your PC seems a little slow, and a little flat, discover the powerful, new world of IRISVISION graphics.

### IRISVISION graphics run the software you're using now, only faster.

Many of the applications you're currently using run with IRISVISION, and VGA passthrough lets you continue to use your PC-based productivity applications. Plus, there are new, easy-to-use 3D applications that help you get the most from sophisticated IRISVISION 3D hardware.

Because the IRISVISION board set supports the industry-standard IRIS Graphics Library®, hundreds of breakthrough, workstation-quality applications are on the way from a multitude of PC® and Macintosh® developers, as well as some of the most established workstation software companies.

### IRISVISION delivers workstation graphics at PC prices.

Three years ago, the only way you could have enjoyed the capabilities available through IRISVISION graphics was to spend about \$75,000 on a high-performance IRIS® workstation.

Today, you can get all the power of the IRISVISION board set for less than most intelligent, high-resolution 2D boards. With prices starting at \$3,495, it's like getting the third dimension free.

The IRISVISION Release 10/11 protected mode AGP driver offers the fastest AutoCAD performance available, even on a SPARCstation™ 2.

With IRISVISION, you can create high-quality renderings and photorealistic images, from animation to scientific visualization.

Real-time 3D enables you to create architectural walkthroughs, and present all your ideas for more clarity.

Because IRISVISION graphics enable you to visualize concepts more quickly and easily, quality is improved and design time is reduced.

### Many of your favorite applications are coming on board.

- Autodesk, AutoCAD Release 10 and 11
- Autodesk, AutoShade Release 2.0
- Autodesk, 3D Studio
- Auto Simulations, AutoMod™
- Bechtel Software, Walkthrough
- CADAM, MicroCADAM 3D
- CADSI, DADS
- CADKEY, CADKEY Release 4
- Digital Arts, Digital Artist
- Dynaware, DynaPerspective
- Intergraph, Microstation PC Version 4
- MCS, Anvil
- Time Arts, Lumina
- Softimage, Softimage 3D
- Wolfram Research, Mathematica

### From the world leader in computer graphics.

For the past decade, Silicon Graphics has defined and redefined the state of the art in computer visualization, on everything from desktop systems to advanced graphics supercomputers. Today, we're a worldwide leader, with sales reaching all four corners of the globe.

That's why, as your needs change, Silicon Graphics can offer you unlimited opportunity to expand your computing power.

# Summer School

A review of two educational software programs.

by Cathalynn Labonte-Smith

## Truck Driving Woman

**Product:** Crosscountry Canada  
**Publisher:** Didatech Software, 3812 William Street, Burnaby, B.C. V5C 3H9 U.S. Toll Free: 800-665-0667. In Canada: (604) 299-4435, FAX (604) 299-2428  
**System Requirements:** For IBM version (also available for Apple II, II Plus, IIe, IIc, IIc Plus) IBM-PC or XT, 512K RAM, MS DOS 2.0 or higher, one floppy drive and hard drive, CGA (note: VGA version will be released soon).  
**Key Features:** A tool to teach Canadian geography to grades 4-9 by having them become a truck driver, who's mission it is to pick up commodities particular to each region and deliver them using the quickest safest route.  
**Price (IBM):** Home edition \$57; School edition \$77; Lab Pack for five computers \$160; Site/Network License \$395.

This summer I became a tough, truck driving woman—I drove a semi-truck from coast to coast in Canada. Of course, first I had to pass the driver's license test, but then all I had to do was pull on my cowboy boots and climb up into my rig. On my trip I learned the physical geography of Canada, as well as some of the unique products our cities have to offer. I slept in my truck while I waited for my orders from a nasty dispatcher who had me making more trips to warehouses than a hummingbird to flowers. I ate in greasy truck-stops, crisscrossed time zones, encountered rain and sleet, cracked up my truck three times, changed two flat tires, spent thousands of dollars on fuel and didn't even get one speeding ticket. I hauled uranium from Sudbury, ON, sulphur from my hometown of Lethbridge, AB and asbestos from Cassiar, BC all the way to Fredericton, NB. When I delivered my load the Canadian flag was raised in my honor and I won a trip to the Quebec Winter Carnival, which I will look forward to throughout this Fall.

Ten-four, Rubber Ducky; bet you didn't think I had it in me, did you? I'm not old Wrong Way Labonté anymore. Ah, the solitary life of the road warrior, shifting multiple gears and radioing for help on the deserted backroads of Canada. Okay, I'll 'fess up, I did it using Didatech's Crosscountry Canada software, where you learn as much about Canadian geography as you learn about the profession of truck driving.

Crosscountry Canada can be played by one student or by teams of students. The winner is the team that spends the least on expenses like repairs, gas and

- 66 MFLOPS single-precision floating point
- 33 MFLOPS double-precision floating point
- 25,000 Gouraud shaded triangles per second (at 24bpp and 100 pixels per triangle)
- Up to 50 megapixels per second block transfer

### 3D RISC Processor

- Intel i860, 1 million transistors, 33 Mhz 64-bit microprocessor
- 3D graphics pipeline architecture with hardwired 3D instructions
- 2 floating point instructions per clock cycle
- Parallel integer and floating point operation
- High speed on-chip 4Kb instruction cache with 8Kb data cache
- Multiple 128-bit internal and 64-bit internal/external busses provide up to 960Mb/sec bus bandwidth
- 24-bit Z-Buffer management on-chip

### 2D VLSI Graphics Processor

- Texas Instruments TMS34020, 32Mhz 32-bit microprocessor
- TIGA v2.0 compatible
- Hardware 2D geometric and raster operations
- Programmable display timing and resolution control
- Host bus interface control

### Program Memory

- 64-bit datapath accessible from the host, TMS34020 or i860 processors
- Up to 16 Megabytes of 80ns processor memory
- Available in 2Mb, 4Mb, 8Mb and 16Mb configurations

### Video Memory

- 2 Megabytes of high-speed Video RAM
- Memory-mapped design allows all processors simultaneous access
- Double-buffering smooths animation at up to 24 bits per pixel

### Expansion Options

- 64-bit i860 expansion bus connector
- Genlock for external NTSC and PAL encoder compatibility
- RS-170 and CCIR-624 compatible output

### Display Subsystem

- VGA pass-through allows single-monitor operation and 100% software compatibility
- Up to 72 hertz international vertical refresh conformance for sharp, stable display

	Color Depth (bpp)	Dot Clock (Mhz)
640 x 480	24/15/8	30.21
768 x 480	24/15/8	37.70
768 x 576	24/15/8	44.90
960 x 600	15/8	46.29
1024 x 768	15/8	76.80
1280 x 1024	8	109.80

### Software Support

- Autodesk ADI features:
  - i860 optimized double-buffered display list for AutoCAD Rel. 11
  - Smooth real-time pan and zoom with Bird's Eye and Spyglass viewports
  - Photo-realistic 24-bit per pixel color support for AutoShade v.2 and 3D Studio
- TIGA 2.0 application interface for TMS34020
- Windows 3.0 graphical user interface
- 3D Real-time Core Graphics and Rendering Library
  - Multiple light source, light shaders and volume shaders
  - Surface shaders including matte, metal and plastic appearances
  - Hidden line removal, clipping and linear transformations

### Operation

- 7 amps at 5 volts, 40 milli-amps at 12 volts
- Double-sided surface mount manufacture

### Quality From

1-800-676-3111

See Pricing on Page 3

food, and finishes their dispatched mission in the shortest time. In addition to teaching navigational skills, e.g., drive southeast, and the obvious geographical skills, Crosscountry Canada also challenges decision-making skills. For instance, I had to decide what was the best route to follow, consider weather conditions for the time of year, when to rest and eat, when to gas up the truck, where to pick up a load when several cities had the same commodities and when to pull into town while the warehouses were still open. There are enough details to

make this program realistic, like turning on the truck, the truck lights at night, or windshield wipers in the rain. The gas gauge was a constant preoccupation as gas cost an exorbitant 60¢ a litre.

Kids who can figure out the complex rules of regular video games will certainly have no trouble navigating through this software, and neither should their teachers. What can I say, this was fun, I learned a lot — I know it's for kids, but they didn't have this back when I was in school. Actually, I think it would be a neat tool for

families to plan their driving holidays with, as it mentions points of interest, the population of each city and something about the city itself. Well, you'll have to excuse me, I've got a rig to get ready, you see, I'm going to truck across the USA, with Crosscountry USA's help, of course.

Note: Crosscountry USA is also available from Didatech in the Macintosh format. Products for the Apple II series of computers are Crosscountry Canada, USA, California and Texas.

## Now with NRI's new training you can enjoy the rewards of a career in computer programming

A top-paying career in computer programming is no longer out of your reach. Now you can get the practical training and experience you need to succeed in this top-growth field.

It's training that gives you real-world programming skills in four of today's hottest computer languages: BASIC, Pascal, C, and COBOL. Hands-on training that includes a powerful IBM AT-compatible computer, modem, and programming software you train with and keep. Comprehensive, at-home training that gives you the competitive edge to succeed in one of today's leading industries. The kind of experience-based training only NRI can provide.

As a trained computer programmer of the '90's, you can enjoy long-term career success. In fact, the Bureau of Labor Statistics forecasts that during the next 10 years job opportunities will increase by 71.7 percent for the skilled computer programmer. With NRI training you can be one of the increasing number of computer programmers using their skills to build a top-paying career—even a business of their own—in this professionally and financially rewarding high-tech field.

**▼ The only programming course that includes a powerful AT-compatible computer system and programming software you keep**

Right from the start, NRI training gets you actively involved in the challenge of real-world computer programming. You learn how to create the kinds of full-featured, powerful programs today's employers and clients demand. And, unlike any other school, NRI lets you experience first-hand the power of an IBM PC/AT-compatible computer system with modem, a full megabyte of RAM, disk drive, and monitor—all yours to train with and keep.

Plus you explore the extraordinary capabilities of not one or two but **four** in-demand computer languages. You learn to design, code, run, debug, and document programs in BASIC, Pascal, C, and COBOL. In the process you become uniquely prepared for the wide variety of programming opportunities available today.

### ▼ No previous experience necessary

Immediately, you start getting the money-making job skills you need to secure a future in computer programming—no matter what your background. With NRI training you move easily from computer novice to computer professional with step-by-step lessons covering program design techniques used every day by successful micro and mainframe programmers.

You'll find no heavy textbooks to plow through. No night classes to attend. Instead, NRI's at-home, step-by-step training covers all the bases, guiding you from the impor-

tant fundamentals to real-world methods and techniques. With the help of your NRI instructor—offering one-on-one, personal guidance throughout your course—you quickly gain the skills you need to handle with confidence a wide variety of programming applications. You even use your modem to "talk" to your instructor, meet other NRI students, and download programs through NRI's exclusive programmers network, PRONET.

### ▼ Send today for your FREE catalog

Now you can have the professional and financial rewards of a career in computer programming. See how NRI at-home training gives you the experience, the know-how, the computer, and the software you need to get started in this top-paying field. Send today for your FREE catalog.

If the coupon is missing, write to us at the NRI School of Computer Programming, McGraw-Hill Continuing Education Center, 300 Water Street, Whitby, Ontario L1N 9B6. Phone (416) 430-5200.

## SchoolWare

**Product:** SchoolWare - English  
**Publisher:** Quality Learning Systems Inc., 151 Front Street, Penticton, B.C. V2A 1H8 Telephone: (604) 492-2592 or 492-1022  
**System Requirements:** AT compatible with VGA and a hard drive. For sound effects you need a Covox Soundmaster board.  
**Key Features:** Tutorials for grades 5-6 English in grammar, vocabulary, reading comprehension and composition, and good work is rewarded with game-playing sessions.  
**Price:** C\$89.95

SchoolWare English took an hour to install because of its insistence on re-copying master files over and over into each subdirectory for each lesson and it took up about a whopping 8 MB of hard disk space. However, Quality Learning Systems Inc. assured me that I had an older version of the program and it can now be installed in twenty minutes.

The program is intended to help grades 5-6 learn English grammar, vocabulary, reading comprehension and composition by giving instructions and questions, then showing them their scores and where they went wrong. I thought the grammar tutorial was its strongest feature, as all the elements of speech were explained and then tested, and when you were wrong it gave you the same kind of example again until you got it right. Also, the short-story exercise was quite good; students are presented with a story to read and then they are asked questions to see if they understood what they read.

The vocabulary component seemed a little unfair, as it was done like an across/down type crossword grid with clues but the clue didn't include how long each word was supposed to be. The paragraph section seemed awkward as I didn't install the mouse, and it seemed to me to be more a lesson in proofreading than in building a correct paragraph, and also it had me trying to guess what the program wanted me to do, rather than what might make a better paragraph.

Quality Learning could improve their system by making the manual meant for the teacher (who can customize and monitor each student's lesson plan) more accessible to a non-technical reader. One other feature that might be added is a quick way to leave the lesson, for when you start a lesson you seem to be committed to going through to the end of it.

If your kids are in need of drill and practice on their grammar, this program may be useful to them. The lessons are solid and the games sufficiently rewarding, though the user-friendliness could be improved for non-teachers.

# Shareware Educational Software

by Gord Simmonds

**Product:** Amy's First Primer (Version 1.8)  
**System Requirements:** IBM PC, XT, AT, PS/2 or PCjr with 256K RAM, color display or TV, IBM color graphics adapter or EGA graphics adapter.

**Publisher:** Rob, Garth, and John Robinson, Computing Specialties, Orange City, IA 51041 USA. It is available as shareware or direct from the author.

**Suitable for:** children aged 4-8 years and requires an

**Price:** Program registration is \$10.00 US.

Simple, colorful, easy-to-use programs for young children are hard to find. Amy's First Primer was written by her father and brothers and reprogrammed until they met with five-year-old Amy's approval.

The programs center around several Kindergarten activities such as learning the alphabet, numbers, shapes, colors, counting, pattern recognition and shape matching.

Utilization of only a few easily recognizable keys allows youngsters to quickly navigate through the available programs and use the program with limited supervision. The Arrow keys navigate, the Enter key selects, etc.

The ABC Song program aids with learning the alphabet by letter/picture association by playing the ABC Song and displaying each letter of the alphabet. Beary Fun Letters displays a picture and waits four seconds for the first letter to be typed in from the keyboard, and will display in both upper and lower case the correct response. Froggy is a delightful maze for problem

solving skills, while Load The Truck is useful in pattern recognition and matching game.

**Product:** School-Mom

**System Requirements:** 256K RAM and a color graphics adapter (CGA). A Microsoft compatible serial mouse is optional.

**Publisher:** Dr. Andy Motes, Motes Educational Software, 1632 Brooks St., Fayetteville, AR 72701.

**Price:** It is available as shareware or direct from the author. Program registration is \$29.00 US.

School-Mom (Version 3.57) is an educational tool for children ages 4 to 16. On its main menu you will find Music, Art, English, Spelling, Math, Time and even Exams. Parents or teachers can edit or add to the School-Mom data files on the registered version.

Each menu item is sub-menus for difficulty levels or options. Create and play tunes by placing notes on a treble staff. Creativity, relaxation, and simple enjoyment can be found under the Art option. Spelling consists of preschool alphabet recognition to spelling drills at any level of difficulty as you can enter your own words.

The English option teaches nouns, verbs, adjectives, and adverbs. Unscramble sentences, study sentence patterns and subject-verb agreement. The math option consists of several math games, addition, subtraction, multiplication and division, and pre-algebra skills. Teaching time to children is simplified with the Time program that actually ticks.

Gord Simmonds is the owner of SIM-COM Services (854-DISK), a company in Abbotsford specializing in shareware.

### TRAINING

## Working with Computers

A search for high tech jobs reveals a need for deeper skills

by R. G. McNutt

**C**ould I be a desktop publisher? Or start my own company to do online research? Or better yet, unleash my total creative potential with hypermedia? Could there be a future for me, the aspiring entrepreneur, in one of these areas?

Packing my pencil and notebook, I ventured forth into downtown Vancouver's information world in search of new career opportunities. What I found was wilder territory and steeper terrain than I had expected. But there may just be gold at the end of the rainbow for pioneers determined to pursue it.

### In Search of Understanding

The information market supports three main businesses: the transmission business; the gathering, retrieval and storage business; and the information understanding business.

Transmission businesses are mainly large, global affairs such as AT&T and IBM. They manufacture hardware and provide network services. These groups tend to cannibalize anyone invading their turf. But unless you decide to compete against Sony, it is unlikely you will meet this fate.

Gathering, retrieval and storage vary from small businesses, such as a local BBS, to large global databases. In general, they are expensive to start and are highly competitive. In business terms, the "barrier to entry" into this field is too high for most.

The information understanding business, on the other hand, is generally small, often local, and relatively easily entered. The understanding business gathers data, transforms it through organization into information relevant to a particular customer, then presents it in a suitable format. Making information understandable is a great untapped market, and most computer entrepreneurs will work in this area. My search took me inside three of Vancouver's understanding businesses:

# KICKS

KICKS COMPUTER SYSTEMS INC

Formerly doing business as

**MORSE-TECH**  
COMMUNICATIONS

We are happy to announce the Grand Opening of our second store to serve you. In addition, we have changed our corporate name from "Morse-Tech Communications" to "KICKS Computer Systems Inc." which we have nationally trade marked. After extensively researching into the computer industry, for future expansion purposes, it became clear to us that we should consider a unique name directly related to ourselves without any slight indication of association with other companies.

## Grand Opening Prize Draw !!!

- First Prize: Legend-2 1436 Non-interlaced SVGA colour monitor (1024x768, .28 mm dp) bundled with Trident 8900 SVGA adapter 1MB
- Second Prize: Cardinal 2400 bps MNP5 internal modem
- Third Prize: Geoworks Ensemble Graphical User Interface Software
- Fourth Prize: 1 of 4 packages of entertainment software (1 for each winner)  
Yeager's Air Combat  
Windows Entertainment Package  
Castles, Wing Commander
- Fifth Prize: 5 legend Hi-res Serial Mouse (1 for each winner)
- Draw Date & Location: The prizes are drawn on September 30, 1991 at the Metrotown  
Please participate at your local KICKS Computer Systems Inc.

- True Intel 80386DX-25 CPU, AMI Bios \$1,399.00
- 1MB memory, exp. to 8MB on-board
- Teac 1.2MB or 1.44MB floppy drive w/ 4MB memory add \$168.00
- Quantum 52 MB (17 ms) V.C. IDE hard drive
- 1 serial, 1 parallel, 1 game ports
- Oak 16-bit SVGA card w/512K 386SX-20 as above \$1259.00
- Desktop baby footprint AT case
- 200W CSA Approved power supply
- Darius HRV1024 SVGA monitor 1024x768,.28mm dp.
- 101-keys Tactile enhanced keyboard

### Smart 386DX-33 Cache System

- True Intel 386DX-33 CPU, AMI Bios \$1,599.00
- 64KB Cache memory, 128KB optional
- 1MB memory, exp. to 32MB on-board w/ 4MB memory add \$168.00
- Teac 1.2MB or 1.44MB floppy drive
- Quantum 52 MB (17 ms) V.C. IDE hard drive
- 1 serial, 1 parallel, 1 game ports
- Oak 16-bit SVGA card w/512K w/ AMD 386-40 add \$60
- Desktop baby footprint AT case
- 200W CSA Approved power supply
- Darius HRV1024 SVGA monitor 1024x768,.28mm dp.
- 101-keys Tactile enhanced keyboard

### Smart i486SX-20 Cache System

- Intel i486SX-20 CPU, 20/25MHz clock speed \$1799.00
- 8 KB internal cache memory
- 64 KB external cache memory, 128 KB optional w/ 4MB memory add \$168.00
- 1 MB memory, expandable to 32MB on-board
- Teac 1.2MB or 1.44MB floppy drive
- Quantum 52 MB (17ms) IDE hard drive
- 2 serial, 1 parallel, 1 game ports
- Trident 8900 1MB SVGA card (1024x768/256 colors, non-inter.)
- Desktop baby footprint AT case
- 200W CSA Approved power supply
- Darius HRV1024 SVGA monitor 1024x768,.28 mm dp
- 101-keys Tactile enhanced keyboard

### Smart i486DX-33 4MB Cache System

- Intel i486DX-33 CPU, AMI Bios \$2,759.00
- Built-in Math Co-processor
- 8 KB internal Cache memory
- 256 KB external Cache memory
- 4 MB memory, expandable 32MB on-board
- Teac 1.2MB or 1.44MB floppy drive
- Western Digital 84 MB (17IDE hard drive
- 2 serial, 1 parallel, 1 game ports
- Trident 8900 1MB SVGA card (1024x768/256 colors, non-inter.)
- Desktop baby footprint AT case
- 200W CSA Approved power supply
- Legend 14" non-Inter. SVGA monitor 1024x768,.28 mm dp
- 101-keys Tactile enhanced keyboard

## TAILOR-MAKE YOUR OWN COMPUTER SYSTEM

ADD A HARD DRIVE, HD/FD CONTROLLER, GRAPHICS CARD & MONITOR TO COMPLETE SYSTEM

### 80286-12/16 SYSTEMS

- 80286-12/16 MHz CPU; AMI Bios 12MHz \$ 379
- 1 MB memory, exp. to 4MB on-board 16MHz \$ 399

### 80386SX-16/20 SYSTEMS

- Intel 386SX-16/20 MHz CPU; AMI Bios 16MHz \$ 525
- 1 MB memory, exp. to 8MB on-board 20MHz \$ 569

### 80386DX-25 SYSTEMS

- True Intel 386DX-25 MHz CPU, AMI Bios \$ 699
- 1 MB (70 ns) memory, exp. to 8MB on-board

### 80386DX-40 Cache SYSTEMS

- AMD 386DX-40 MHz CPU; AMI Bios \$ 959
- 64 KB Cache memory; 128 KB optional 33MHz \$ 879
- 1 MB (70 ns) memory, exp. to 32 MB on board

### i486SX-20 Cache SYSTEMS

- True Intel i486SX-20 CPU, AMI Bios \$ 1,099
- 8 KB internal cache memory
- 64 KB external cache memory, 128 KB optional
- 1 MB (70 ns) memory, exp. to 32 MB on-board

### i486DX-25 Cache SYSTEMS

- True Intel i486DX-25 CPU, AMI Bios \$ 1,359
- Built-in Math Co-processor
- 8 KB internal cache memory
- 64 KB external cache memory, 128 KB optional
- 1 MB (70 ns) memory, exp. to 32MB on-board

### i486DX-33 Cache SYSTEMS

- True Intel i486DX-33 CPU, AMI Bios \$ 1,679
- Built-in Math Co-processor
- 8 KB internal cache memory
- 256 KB external cache memory
- 1 MB (70 ns) memory, exp. to 32MB on-board

All "tailor make" computer systems comes with the following configuration:

- 1 MB RAM (80 ns or faster)
- small footprint desktop case
- 200 Watt CSA power supply
- 1.2 MB or 1.44 MB floppy drive
- 1 serial, 1 parallel, 1 game ports

101-keys enhanced tactile keyboard  
All systems come with a full two year parts and labour depot service warranty.

(one year warranty for 286 and 386SX systems.)

**2 YR.  
Warranty**

Prices may change without notice.  
Please call for the latest pricing.

## Grand Opening SUPER DEALS !!!

- Intel 387-33 Math Co-processor \$269.00
- Cyrix 387-33 Math Co-processor \$249.00

## CAREER SAFARI

desktop publishing, online research, and hypermedia.

### Breaking The Trail in Desktop Publishing

Owner Patricia Hort of Afterwords Publishing Services, a Vancouver art production company, kindly agreed to escort me into the world of desktop publishing (DTP). With 20 years' experience in art production and typesetting, Patricia is a skillful guide who speaks with confidence and knowledge.

Involved in DTP since 1985, she sees DTP not so much as an end in itself but as "just another tool" to serve her clients—mostly art agencies and other designers. She describes the Vancouver market as "diverse and specialized, and apt to become more that way" as the technology finds specialty markets.

Patricia expects the industry to show considerable growth as organizations such as newspapers, press agencies, art production houses and printers mate DTP with their in-house production systems. The advantage? Control over time and production—not cost, as many believe. Productivity usually drops until users master the learning curve.

If your thinking of giving up your present career for a DTP position, make sure you have a comprehensive background in the graphics or typesetting disciplines. "You need a lot more experience than most quick courses provide," says Patricia. "Years and years of skill and training are required to be a first-class DTP publisher." A good DTP publisher is competent in typography, screen angles, color work, production processes, copyright, concept design and layout, paste-up, film and plate making and printing. Patricia wouldn't even consider hiring someone with less than two years' experience in traditional graphic arts or typesetting. Other desirable traits are methodical work habits, an instinct for working within computers, and creativity.

If you're good, so is the money: \$20 to \$30 per hour. If you're bad, you won't be in the industry long.

Patricia sees the DTP future as exciting and expects outrageously creative work to become commonplace. Her advice for those wishing to become involved: get training and experience in the traditional art or typesetting environment first; then become a DTP publisher.

Thoroughly inspired by Patricia, but dismayed over how many new skills I needed to enter DTP, I decided to shift my search elsewhere.

### Digital Hunters: Online Research

A short trek brought me to one of Vancouver's well-established data researchers: Tania Gorn of Just The Facts Research Inc. Tania, a librarian by trade, has spent 10 years in the online research industry and was happy to share her hard-earned knowledge.

Just The Facts provides a combination of online and manual research. Also available are custom

database set-ups and a records-management service. Clients are entrepreneurs and businesses of all sizes who have budgeted for information research because they understand its value. They buy information in a number of categories, including market and stock trends, patents, statistics, market issues, sales figures and competitor information. Most prefer to use the expertise of consultants such as Tania because it saves them both time and money over having employees do searches which can require a high level of skill.

When I asked Tania about my future in online research, she was polite but realistic.

About 90% of information researchers, she explained, have a degree in library sciences—although she admitted that one can compensate with specific knowledge or expertise in a subject area. The Vancouver market is small (sun-tanning parlors outnumber information businesses 3-to-1 in the Vancouver yellow pages) and not expected to develop rapidly in the near future. Cities such as Toronto, with many corporate headquarters, offer a much broader market base. Modems, however, can open up remote markets—Tania serves clients in California, Australia and Japan.

Successful marketing is largely based on having contacts in the industry, making it a hard one to break into, and the industry itself is susceptible to recessions. On the plus side, overhead to start a small firm is relatively low—a computer, modem, telephone and plenty of sharpened pencils.

To make it in the B.C. market you must be "good," which means fast, efficient and knowledgeable. And while Tania Gorn has been very successful, she advises newcomers to get training, understand and target their market very carefully, and not to give up the day job at first. Even if you're good, she says, it can be hard to make a living. I decided to safari on.

### What's all the Hype?

Perhaps the most exciting area for future growth is "hypermedia," a presentation technology brought about by increases in information storage and the need to refine access and delivery for end users.

Hypermedia (or multimedia—the terms are interchangeable) refers to computer based delivery of multiple mediums: sound, music, text, static graphics, animations and full motion video. Hypermedia represents a different way of accessing and presenting information which allows the user maximum control over a multi-sensory learning process.

In hypermedia, information is grouped non-sequentially into "nodes" which rely on intelligently programmed inter-linkings. Unlike a book, which reads from start to finish, hypermedia products can jump about from chapter to chapter, back and forth, and maintain intelligibility. The result is much faster navigation, especially through large volumes of information

such as CDs and laserdiscs, and a more entertaining, engaging and educational experience for the user.

Sometimes called "interest path learning," hypermedia shifts learning from dry, rote, left-brained repetition towards a more-fluid, intuitive, right-brained approach. This will delight many (especially children), but may confuse others who are more "straight line" thinkers. Hypermedia also requires much greater levels of user participation — a plus for learning, but a setback for others who like a more passive approach.

Despite any drawbacks, hypermedia appears poised for major growth. A September 1990 Market Intelligence Research Corporation study projects a two-billion-dollar market by 1997. And hypermedia experts predict even television and newspapers will ultimately be user-interactive.

B.C. companies such as MotionWorks of Vancouver and Sanctuary Woods of Victoria are promoting hypermedia for training and education, advertising, information kiosks, professional presentations, computer games and other applications. Some B.C. educational institutions are already applying the technology in the school system—the area which may represent its greatest potential. Other smaller companies and a handful of hopeful individuals are specializing in niche markets.

But despite high-end customers such as CP Rail, Vancouver Children's Hospital and the B.C. Government, the Vancouver market is still moving slowly due to hard financial times and the untested nature of the product. Hypermedia will "slowly and steadily" evolve in the B.C. market, "as corporations become aware of its value," according to Vancouver systems consultant Brent Lewis.

To be a good hypermedia producer requires an extensive background in a variety of fields. Brent Lewis looks for people who have at least some of the combined skills of animator, artist, movie producer, graphic designer, sound engineer and computer expert. And you should be well organized, calm, and able to deal well with high levels of stress. Pay varies, but \$15-\$20 per hour is an average starting wage — if you're lucky enough to find steady

work. Most hypermedia productions are done on a contract basis by small companies which call in programming or artistic help as required. And while prices are coming down, a studio of professional-quality equipment will likely cost you \$10,000 and up. Upon hearing that, I decided to set compass back to the classroom.

### Back to the Books (and software tutorials)

As my career search came to an end, it became clear that desktop publishing, online research and hypermedia productions are tools, not trades. Anyone wishing to be involved will need solid background training and considerable experience in related areas before they are in demand. Beware of short courses that promise to turn you into an industry expert in a few weeks or months. If interested in pursuing any of these or other information careers, talk to as many people as you can who are already working in the industry before committing yourself.

The future of these technologies is bright, so look upon this as a time to prepare yourself. Because if you don't have the credentials, it can be a concrete jungle out there. Really!

## PUT YOUR BEST IDEAS IN MOTION

# Animator

You're a small business, with a terrific idea for a product. You need a demo that will really fly at the sales presentation. Like, *really* fly. Or maybe you want to have your logo as an eye-popping computer animation in your company video. But you need it tomorrow, and it's got to be good. Put your best ideas in motion with *Animator*,

from Autodesk. *Animator* gives you effects such as cel animation, polymorphic 'tweening, colour cycling and animated titling functions. You can import graphics from your favourite graphic program, then manipulate them using an array of animation and image enhancement tools. Distribute your animations freely with

the enclosed public-domain player utility, or output to videotape with a video overlay card such as the Truevision VideoVGA card. For sales presentations, simulations, and training, *Animator* is your best choice for 2-D computer animation. Requires '286 or '386 PC with 640K, VGA monitor, mouse, hard disk.

## TRAINING

# Only the Educated Will Survive

by Bret Dobbin

Now that Canadian businesses are cautiously embracing the good news of a fading recession, company executives are once again able to focus on other important aspects of their growing enterprises. Managers are re-discovering the disturbing reality that employee education still remains one of the most complex management issues of the 90's.

According to Statistics Canada, companies in this country spend only half the amount of what American, Japanese, and Swedish companies allocate for computer education. In fact, the decade of the '80's saw only 25 percent of all Canadian companies including training costs within their annual budgets, and only 14 percent of all Canadian employees regularly enrolled in computer courses sponsored by their employers.

But it seems that corporate Canada is finally starting to see the correlation between lack of training and poor office productivity. Management has just now realized that large increases in expenditures for automation technology have not guaranteed increased productivity. Suddenly,

computer training is being viewed as a strategic investment rather than a menacing cost.

How can a company, who has come to terms with the reality of computer education as a necessity, begin to provide training for their employees? Ideally, this question should be addressed even before a new system is implemented into the employee work environment. It is vital to first determine who the new users are, what existing levels of expertise these users already have, and what new levels of increased productivity will they be expected to reach with the introduction of the new computer technology to be installed.

Many consultants recommend that a company communicate the general nature of its training plans to its employees by making a positive strategic positioning statement which indicates the direction of the company. If the message is clearly communicated by the employer and readily accepted by the employees, there will be an increased desire to learn about the new technology.

It is important that the company's new training plan include guidelines

## TRAINING

annual budgets, and methods of training and re-training as new software upgrades may eventually require. It is absolutely imperative that the company commit to ongoing education as an integral function of the company itself. A philosophical commitment can be demonstrated in a written strategy statement or as part of the company's formal business plan. A more decisive action would involve senior management assigning a top executive to take direct responsibility for the introduction and execution of all education programs.

For those who are committed to future survival and growth, it is wise to allocate an annual investment of approximately 10 percent of yearly hardware costs for the company education budget. It is important to realize that this new training and education endeavor is much more than a 12-24 month company plan. As hardware technology changes, and because many application software packages are upgraded about every 9 months, it is essential to make the training concept a permanent commitment.

How does a company, after deciding to introduce an education program, select the best training method for its employees? Indeed, there does seem to be a puzzling array of options including reference manuals and third party textbooks, audio cassettes and video tapes, on-line help and computer-based training, as well as hands-on training in a traditional classroom setting.

While reference manuals and texts have always been the least popular - and perhaps the most frustrating - method of learning, audio/video cassettes are gaining popularity as inexpensive options for computer training. Ranging from \$60.00 to \$600.00, these simple tools are ideal for people who are somewhat familiar with computers and also technically capable of running audiovisual equipment. As most people are comfortable in front of a television or stereo, these training tools can often prove to be the least intimidating and the most ideal for "at-your-own-pace" learning.

Perhaps one of the greatest advances in "user-friendly" software is the recent advent of on-line manuals and context sensitive help screens. Combine these electronic miracles with training disks complete with sample exercises and you begin to delve into the world of computer-based training. Computer-based training requires no extra equipment and is available from a variety of vendors in the \$30.00 to \$300.00 range.

However, most experts agree that instructor-led training is the most effective method for learning. In addition to the availability of an instructor who can give immediate answers to questions as they arise, students usually work in a lab environment with 6 to 10 other users who are also going through the same learning process. While this type of

training isn't exactly inexpensive - with ranges from \$100.00 to \$1000.00 per person per day - it is usually found to be the most rewarding for participating students.

Even after deciding that classroom education would be the most ideal method for your computer training, there are still several important decisions to make before selecting your particular training site. Three of the key factors to consider are the staff, the training environment, and the equipment.

What are the qualifications of your prospective instructors?

An ideal course instructor will have an excellent working knowledge of the computer products to be studied and have experience in teaching adult employees. In the event that the training company also sells computer hardware and software, it is important that your instructor is someone other than a computer sales representative. Ideally, your vendor will have an Education Division with separate personnel who handle training independently from the Commercial Sales Division.

Will the training environment be conducive to learning? Many companies now specialize in training for employees of third-party companies and have created learning labs which are designed strictly for teaching. When speaking with a prospective training company, insist on visiting their premises if the training will be conducted in their labs. In many cases, although prices generally increase, companies can send instructors out to the customer's site if there are enough employees needing simultaneous training on the same products.

What equipment does the prospective training company utilize? This is especially important for courses, such as networking management or computer maintenance, which are hardware-oriented. It is best if their lab environment emulates your own on-site work environment and that the instructors are familiar with your equipment. And it doesn't hurt to have references from employees of other companies that have the same equipment you have and have satisfactorily completed courses with the prospective trainer as well.

While the growing commitment to employee education becomes a reality for all of corporate Canada, perhaps the most important thing small businesses can do is to follow suit. This investment, of time and money, will indeed pay off with big dividends in the near future. As every company, both big and small, prepares to compete in a global economy, many are predicting that only the educated will remain as the survivors.

# A Tale of Two Dyslexics

by George Slade

How computer technology can affect those with learning disabilities.

This is a true story of two men. As chance would have it, these two men were born on the same day, and they both have dyslexia, a disturbance of the ability to read. Lets call these two men Jay and Steve.

As I grew up and went through school with them, they both had drastic problems conforming to the education system. Both had numerous failures in school, being held back, etc. Both were identified as having dyslexia. But yet at the same time both would display signs of brilliance in their life outside of school. As time went on, both succeeded in struggling through high school and both graduated.

The educational system patted itself on the back, thinking it had done its job and these boys had obtained sufficient grades to graduate. This was considered a victory. In reality it was a failure—all the educational system had done is succeed in crushing the self-esteem of these men. It had also labeled them as dumb because their marks were low.

Unable to proceed with post-secondary education (because of low marks) Steve and Jay went searching out a place for themselves in the real world of work. Both men exhibited the ability to work hard but both still had serious handicaps in written English, and neither had any post-secondary education. The lack of any post-secondary education was the biggest impairment, not their weak English skills. As the years went on, both went from one low-paying job to the next.

Photo by Image Club

A divergence in these two men's paths came when Steve discovered the personal computer. No, he did not invent it, but he discovered that it was a tool which he could use to get around his dyslexia problem. The computer did not cure the learning disability, what it did is provide an alternative method of producing written material.

This allowed Steve to get his ideas in print in a meaningful way rather than in the jumbled mess which was the usual result.

Dyslexia is a "catch-all" word for many forms of learning (processing) disabilities. In Steve's case the disability was an inability to express himself in written form. Basically his brain was faster than his hands and he could in no way slow down his thinking process or speed up his hands.

The solution for Steve was word processing where he could bash out his thoughts and then use spell checkers and grammar checkers to go over the text and refine it. What if Steve had been able to have a notebook computer to use in high school instead of carrying around three-ring binders full of blank paper? He probably would have overcome his disability earlier and been able to avoid the pain and stigma which he suffered.

The current status of Steve and Jay is that Steve is now a well-respected businessman who has achieved a level of success never dreamed of by any of his teachers in high school. Jay has yet to break the cycle of low-paying, no-future jobs and has yet to discover the benefits that using a computer may make in his life.

This is a simplified but true, story. There are a lot more factors involved in both these men's lives which have had impacts on their respective levels of self-esteem, which also impacts on their levels of success.

The moral of this story is not "If you have a child with learning disabilities, buy them a PC and they will end up being the CEO of IBM," and in no way do I want to lead parents of children with learning disabilities down a path with no results.

The moral of the story is that technology enables some people with learning disabilities to overcome some disabilities. In this case, Steve's learning disability took the form of interrupting the process of getting his ideas from his mind down on paper.

The educational system did not recognize this as being a medical

problem that could be overcome, but rather "Just a lazy kid." If your child has one leg that has not developed normally and needs special equipment to walk, you will get that special equipment for that child to walk (in fact the government will pay for that equipment). Why not use technology to help a child who can't write, just like it helps a child who can't walk? For Steve the brace is a microcomputer. For another child the brace may be a pocket calculator, and another may need a pocket computer.

There is nothing more painful than having a child with a disability, and this pain is compounded when society does not recognize the problem. I have witnessed the frustration of parents struggling to find out why their child is

not doing well at school.

It is my hope that anyone who reads this, and identifies with it, may realize the crutch or brace for their child or a friend's child may indeed come in the form of a microcomputer, and will go out and get the correct brace for their child and encourage them to use it. Each child with a disability is different and the solution for each child is different. Computers may be another tool to be used in solving these problems.

Just as using the computer to solve business problems requires thought, using the computer to solve an educational problem requires thought.

Continued from page 94

they still sometimes have to fiddle the code to get the results they want—but every year the systems get better.

To assess the reasons aircraft components occasionally go wrong, Bacon Donaldson Laboratories use microcomputer technology for failure analysis, nondestructive examination and mechanical testing. Legal and insurance clients around the world call upon this Richmond, B.C. company's resources to explain everything from techniques used in terrorist bombs to in-flight failure of structural components.

Perhaps the most impressive display of personal computer graphics at the show was put on by Montreal's Allied-Signal Aerospace Canada. Their SIMULATRIX aircraft technician training system incorporates breathtaking 256-color animation to explain the workings of jet engines. Using a 2.5 MB graphic display board of their own design, Allied-Signal tie in a VCR for video overlay with color animation and digitally stored voice to create a truly multi-media, interactive training system.

The student controls the pace and depth of the lesson by pointing with a mouse to on-screen menus. SIMULATRIX explains the innermost workings of jet turbine engines by showing combustion processes in real-time animation.

Vancouver's BC Research Corporation uses microcomputers extensively to meet the design objectives of their aerospace clients. The Tensidyne fatigue monitoring fuse, a serrated alloy wafer about the size of a credit card, was developed using 386 and 486 PCs, along with Silicon Graphics engineering workstations, for California-based Tensidyne Corporation.

Keeping aviation and aerospace companies across North America informed of the latest developments is the Aviation Aerospace Information Network (AVIN), operated by Allan K. Hunkin of Langley, B.C. and running on the Canadian-designed SUZY computer information exchange. PC users with modems can exchange electronic mail, research data files and spreadsheet archives, or post bulletins on the AVIN grapevine.

The above are but a few of the companies which keep Canada at the forefront of aviation research. Most are small and entrepreneurial, with expertise in niche areas. All use microcomputers to innovate solutions in one of the most sophisticated and exacting industries. Though rarely acknowledged, such companies represent Canada's best hopes for the future in a global market.

The Abbotsford show also illustrates the extent to which personal computers are encroaching into the rarefied domain of the graphics workstation.

This can only be good news for small Canadian development companies whose primary assets are vision and talent—and for the worldwide aviation industry which reaps the rewards of their research.

## Microcomputer Research Takes Off at the Abbotsford Air Show

by John Mulvihill (684-3214)

Any lingering doubts about the microcomputer's application in advanced research are quickly put to rest by a visit to the Abbotsford Air Show. A stroll past the exhibitors' booths at Airshow Canada '91, the industry trade show portion of this world-class airplane extravaganza, unearths dozens of Canadian companies who use personal computer platforms in aerospace applications previously the exclusive domain of mainframes and minis.

Consider the real-time, fully graphic geographical tracking system developed by Axion Spatial Imaging Ltd. of Edmonton. On a standard 386-based PC they store a digitally compressed map of Italy, which the user can expand in sufficient detail to view the canals of Venice. Full 3-D topographic rendering is supported.

Before leaving for a flight, pilots must go through preflight briefing with airport officials to share route and weather information. Conducted in person or over the phone, these exchanges involve a lot of Q&A and taking of notes. MacDonald Dettwiler of Richmond, B.C. offers an alternative: pilots can use their laptop computers to log on to their National Aeronautical Information Processing System (NAIPS) and download the very latest information. More convenient, more efficient, and less prone to misunderstanding.

Microcomputers play a growing role in the manufacture of aircraft components. Zum Hingst Technologies of North Vancouver have pioneered the use of personal computers in the operation of milling and machining equipment. Back in 1977 they wrote their own code to achieve the precision required for aircraft standards from their NC (numerical code) machines.

Now, they run their nine milling machines with 386-based PCs via a Lantastic network, using AutoCAD software for component design and the SmartCAM program to translate their blueprints into machine instructions. According to owner Uwe Zum Hingst,

## NEW OFFICE IN KAMLOOPS

With a booming economy in the Okanagan region of British Columbia, ANO Office Automation is further expanding its network of offices with the opening of the Kamloops branch slated for mid-September, 1991.

The new office, located in the industrial district of Kamloops, will house a complete sales and service department with a full time Novell approved technician on-staff. Catering to the business, education, and government sectors, the primary thrust of this new office will be service.

"In today's dog-eat-dog world of the hi-tech industry, the successful reseller must stand apart from the rest. We do this through service excellence and not through price-price-price.", explains Mr. Dick Medema, Regional Manager for the Okanagan and Kamloops.

We wish them all continued success in the bountiful and beautiful Okanagan and Shuswap regions!

### COME ON DOWN

ANO Office Automation will be participating in the Vancouver Business Computer Show September 18th and 19th at the Robson Square Media Centre (Booth #110), the Marketplace '91 exhibit September 19th and 20th for the ministries of the Province of British Columbia, and the UBC Computer Show October 9th and 10th.

We hope you get the opportunity to come down and visit our booth.

### New Bundle

## The Microsoft Office

The incredible success of Microsoft's Windows 3.0 operating environment has spawned a plethora of products supporting this new wave in personal computing. Even companies like Lotus, and WordPerfect who have traditionally stuck by their guns with text based applications are now folding to the demands for Windows versions.

Microsoft has gone one step further in securing its hold on the Windows applications market with the repackaging and attractive pricing of what it labels "The Microsoft Office". Essentially it is the bundling of Excel 3.0 the

leading graphical spreadsheet, Word for Windows, the number one selling full featured graphical word processor,

PowerPoint, the powerful presentation graphics program, and Microsoft Mail version 2.1, their latest entry in the network marketplace which is an excellent electronic mail solution supporting all major PC networks.

The major advantage is that all of the products offer a

consistent interface, reducing the learning curve dramatically. Of course the attractive list price of only \$899 Canadian makes it even more appealing.

## More Power

# New 50MHz 486 Processor

Just when you thought it was safe to invest in a PC based on Intel's 33MHz 486DX, Intel turns around and announces the mass production of a new chip operating at 50MHz. Although actual systems aren't expected to ship until early Winter (probably to be profiled at the Fall Comdex in October at Las Vegas, NV), Intel has released the chip to PC manufacturer's for development.

This announcement comes fresh

on the heels of the co-release of the 386SL portable processor chip set by Intel and Zenith Data Systems at the Spring Comdex in Atlanta, GA. This revolutionary new processor set effectively makes notebooks running on the 20 and 16MHz 386SX obsolete after only a few months off the production lines. Already in mass production, Zenith's MastersPort 386SL boasts an extraordinary 8 to 11 hours of battery with a meagre 1 to 1.5

hours of recharge time. Other features include a stunning 32 grey scale VGA display, 16-bit display bus, 1.44MB 3.5" floppy drive, a special 60MB Conner hard drive, and 2MB of RAM, all weighing in under 7 pounds.

Also anticipated at Comdex will be Intel's much awaited 586 CPU. Although not official, it would only seem logical that Intel would have something nouveau to show the power hungry public.

## Tech Talk with Ken Ng

## System Maintenance

**Q.** *What preventative maintenance techniques should I use to improve the life of my PC?*

**A.** PC's and their peripherals are delicate pieces of equipment. Aside from the preventative maintenance required (which I will get to later on), it is also vital that the operating environment be relatively dust free. One of the biggest problems (aside from dirty power) our service

department deals with is dust that accumulates inside the PC causing a component to short out.

In order to keep the system in good shape you should clean it up about once every 4 to 6 months. To do this you will need to invest in a floppy drive cleaning kit (one for each size of drive), a tape drive cleaning kit (if necessary), a bottle of compressed air, a hard drive utility package such as Spin Rite II or Optune, and a vacuum cleaner.

Once you have all of the supplies, you will have to open up your computer and take out all of the expansion cards. Using the compressed air clear out the power supply fan, ventilation slots in the case, floppy drives, tape drives, expansion slots, and expansion boards. Then strike up the vacuum cleaner and suck up all of the obvious dust and dirt. Next, using the drive cleaning kits, clean out the floppy and tape drives. After all this is done, piece your system together and run the hard drive clean up utility.

If you don't quite feel that adventurous, you can bring your system into our office and we'll do it all for you under our PC Tune Up program - volume discounts are available for multiple machines. This service by the way is included with the renewal of a Security Support On-site Service Program.

Other Tune Ups are available for laser and dot matrix printers - we'll discuss that one some other time.

AND

*Perfect Fit*

## Bubble Jet Accels In CAD

The biggest assets for the average business user of the Canon BJ-300 and BJ-330 has been the outstanding paper handling, quiet operation, blinding speed and superb output. For the engineering community, however, the speed and output are the real clinchers.

Through the use of Print-a-Plot (a third party software application), the latest additions to the Bubble Jet family effortlessly produce stunning CAD drawings without the expense of special paper. The biggest advantage being that every engineer can have a 300 or 330 by their desk to produce 360dpi quick

plots for final checking before sending it to an actual full size plotter - they'll even print on velum.

As well, instead of storing large D or E size plots, engineering firms are finding it handy to simply print out a plot on letter, legal, or ledger paper and file it like any other piece of paper. Thus reducing wasted

space, eliminating the cost of additional copies, and making for a more efficient filing system.

For more information on the Canon BJ-300 or BJ-330 call the ANO office nearest you or send in the "Reader Response Card" at the back of this month's ANOvation.

ANO

*Much Improved*

## Enhanced Training Program

ANO Office Automation and Computer Consultants International have made arrangements with Vancouver Community College and Douglas College to carry daytime courses at ANO's National Head Office in Richmond, B.C.

Commenting on this new program, Gillian Gallie, Co-ordinator for ANO's Professional Training Division furthers that this new arrangement "will enhance our capabilities to provide a full service training program. The demand for top notch computer training is growing rapidly. We anticipate this will reduce the burden on the evening and Saturday classes."

One of the biggest reasons cited for the popularity of computer training from sources like ANO is that the

software available keeps changing. Making it less than feasible to maintain an in-house training program. Since third party training programs can distribute the costs amongst a wider audience, the actual costs themselves are very attractive.

Aside from the packaged courses, ANO also offers customized courses for the business user with very specific training needs. Experts are available to help design a unique training program from a list of dozens of ap-

plications and operating environments, tailored to any company's requirements. Some of the most popular include WordPerfect, Windows, ACCPAC, Lotus, dBase, Ventura, Excel, Novell Netware, and OS/2.

These customized courses can be held either one-on-one on-site, or in our classroom facilities. Should you have a unique application program which has been mastered by your own in-house expert, classroom rentals are available through Richmond, Kelowna, Edmonton, Ottawa, and Toronto.

For further information contact the ANO office nearest you or our Professional Training Division at (604) 276-8898.

# Customer Database Management

If you are not maintaining a strategically structured program for customer tracking, you could be losing out on lost revenue. Generally speaking, repeat patronage is a key to success. The way which you handle past customers can affect future revenues.

In this article we will be discussing the many facets of customer database management. Input has been supplied by industry leaders to ensure that all bases have been covered from a variety of angles.

## PROSPECT MANAGEMENT

Prospect Management is different from Customer Management in that it requires considerably more energy to prepare. With customers you probably already have the information required to setup a quality database. With prospects, however, you usually have to put in a little more time to acquire information about their business.

If you plan on using the database for direct mailing to prospects, you must make sure that the money you are putting into the mailer isn't ending up in the circular filing cabinet under "G". Your database should be targeted to the decision makers, and those who influence the decision makers.

## IDENTIFYING PURPOSE

The purpose of any customer database should be that of a marketing tool. One company which makes excellent use of its customer database

is Tip Top Tailors. Everyone that buys a product from Tip Top is asked if they are a member. If you are, you receive discounts and seasonal updates on upcoming specials. If you are not, they will add your name to their list simply by filling out a quick form.

You see Tip Top already knows that you buy suits or dress clothes, thus they invest the time to make sure that you come back to them when you need a new suit or tie. Of course they also understand that just because you're on their database doesn't mean you'll buy from them. Tip Top also spends an extraordinary amount of energy ensuring that you receive excellent service and an equally attractive price.

Tip Top can also use this database for sales analysis purposes. They should be able to track the number of club members who return to their stores, if customers are loyal to one particular location, customer buying frequency, and the average purchase of a club member. This type of information is crucial

when putting together a marketing strategy because they are better able to accurately target their campaigns.

Quality car dealerships use customer databases to track client purchases and remind the customer when it is time to come in for service. This is an excellent opportunity to both increase service revenue and to reinforce their market positioning in the

consumers mind. As the average buying cycle is between 5 and 7 years in the automotive industry, a small investment in their customer database can mean thousands upon thousands of dollars in future revenue.

A properly maintained customer database can also reduce the learning curve when a new sales rep takes on an account. If the account is well documented, he or she won't be spending a lot of time sifting through paper or

data files, and asking questions which should be easily accessible.

## IDENTIFYING NEEDS

The initial stage in creating a customer database is sifting through what you believe to be vital information about the customer. In order for a sporting goods distributor's database to be effective they must break-down the types of stores they deal with. For them there are specialty stores (skiing, hockey, baseball, football etc.), general stores, and clothing only stores.

Also, they must know which accounts they already deal with, their average annual purchases, and who is responsible for that account. This type of information is essential when putting together a structured database. Without it, implementing a telemarketing or direct mail campaign would be next to impossible.

## DATABASE MANAGEMENT

One area where many get out of the gates quickly but fade out in the stretch is managing an existing database. Keeping a database up to date

requires time. If left unattended it will inevitably end up in a mish-mash of junk and quality contacts.

The best way to keep a database updated is through utilization. Through telemarketing and direct mail, a database can be kept relatively clean. One mailer which works particularly well for this purpose is a questionnaire - be sure it includes a change of address and contact section. It also acts as a superb marketing tool for identifying customer wants and needs.

Never become lazy when maintaining your database. Each piece of information can be important, and may be needed sooner or later. You may want to make it the responsibility of each sales rep to maintain their account and prospect database.

Of equal importance is that you get the correct spelling of the customer and his or her name. Nothing is more irritating to a reader than spelling errors.

### AVOID CLUTTER

When setting up your database, be sure to include pertinent information, but don't clutter it up with trivial data. In general you will need to know the following information which we have outlined below.

#### Customer Type

This can include identification as a Frequent Buyer, Casual Buyer, or Prospect.

#### Industry

For those dealing with multiple industries this is vital. When targeting specific markets it is important to be able to quickly and easily separate them from the rest of the pack.

#### Product Interests

If you deal with a number of product lines it is important that you be able to target marketing campaigns towards those clients interested in particular products. Using the sporting goods distributor as an example, it would be redundant for them to

market a new line of ski equipment to holiday swimwear stores.

#### Sales Rep

Be sure to identify the sales personnel responsible for each account. Should a sales rep leave, it will be easier to distribute their accounts and prospects to other sales reps.

#### Important Dates

Record any important dates which relate to each customer; i.e. birthdays, anniversary's, corporate year end, vacations etc.

#### Other

For ANO Office Automation our customer database is also used to track data about network installations and those customers that subscribe to annual on-site service. This type of information allows us to effectively manage our account base. As the sales, support, service, and telemarketing personnel have access to this data, we are better able to keep up to date records on our clients.

### USING YOUR DATABASE

Once you have an established customer/prospect database in place it's time to put it to use. As was mentioned earlier we use our database for many things - direct mail, telemarketing, service contract maintenance, general customer information, and service information.

What you choose to use your database for will directly affect the software you select. Be sure to plan this out carefully and with longterm

goals in mind. The last thing you don't want to have to do is change software in mid-stride.

### DIRECT MAILING

Direct mail is probably the most common use for a customer database. A properly structured database will directly affect the effectiveness of this type of marketing activity. Obviously, an unorganized ill-planned customer database will result in a similar end product - as the saying goes "junk in, junk out".

Here are some general rules for successful direct mailing, assuming that your database is properly setup.

#### Rule #1: Get It The Right People

Don't waste your time sending direct mail pieces to those who won't read it. Try to avoid sending a mailer to a position such as general manager. Sending a mailer to an actual person has a higher probability of being read. Most secretaries are told to trash direct mailers that aren't for a particular person.

#### Rule #2: Attractive Packaging

The better looking the packaging your mailer is contained in the higher chance of it being opened and read.

#### Rule #3: Attractive Content

The never judge a book by its cover adage is no more important than with direct mail. The attractiveness of your direct mail piece is just as important as the packaging.

#### Rule #4: Get To The Point

Most people in a decision making role want the meat of your message up front. Even in newsletters, you will lose the readers interest if you don't get to the point quickly.

### IMPROVED CUSTOMER TRACKING

Many companies choose to use their accounting software for this one, however, most systems (without the help of third party software) don't do

*Continued on Page 6*

*Long Awaited*

# Canofile 250 Conquering The Paper Jungle

Document filing is the single most important area needing improvement in today's office environment. Storing and retrieving information swiftly and effectively is an urgent priority to all office workers. Yet piles of information are often left neglected - accumulating on desktops, stuffed into drawers or at best filed in clumsy, awkward filing cabinets.

A survey conducted in Japan, asked companies to prioritize those conditions which would lead to a better office environment. A very high percentage of management, as well as office staff, felt it necessary to improve their filing systems. Canon responded to this need by introducing the Canofile 250 - the world's first desktop electronic filing unit.

Electronic filing systems using magnetic and optical media show a very prominent increase in demand. In fact, according to statistics compiled by the Association of Image and Information Management (AIIM), the information and image management industry is expected to grow 300% by the year 1993. By the year 1993, 54% of the entire product segment will be occupied by electronic filing systems. Clearly, in the future, electronic processing and automated retrieval of information will become standard in every office.

In spite of the strong demand for electronic filing systems, those previously available did not penetrate the market very deeply. The reasons behind this were the high price tag and complex operation procedure, as well as the space factor (conventional systems are very large). Moreover, most of the currently available electronic filing systems use non-rewriteable optical disks, a great inconvenience when processing active documents.

With these thoughts in mind, Canon developed the Canofile 250 - compact, easy to use, reasonably priced and with a magneto optical disk that's rewriteable. The Canofile 250 is specially suited for those smaller offices and businesses that perhaps refrained from purchasing electronic filing systems, however desirable, due to high cost and/or complex operation. Additionally, departmental sections within large corporations will also find the Canofile 250 particularly helpful.

## HIGH CAPACITY

The Canofile 250 uses Canon's newly developed Magneto Optical

Disk (MOD) "Diskfile 502M" which provides high-speed access to and high-capacity storage of data in a removeable cartridge format - about the size of a standard CD.

Although magneto-optical technology is a relatively new concept, it utilizes principles of magnetic recording which were proven effective long ago. The result is a high-capacity recording and storing system that combines the best of optical and magnetic disk technology allowing information to be updated or deleted.

## BLINDING SPEED

Conventional filing cabinets are often bulky and cumbersome to sort through, but with the Canofile 250 electronic filing system, thousands of files can be safely and conveniently stored on one desktop.

What once might have taken office staff several hours to file, now can be done in a matter of minutes. A single magneto optical disk can store up to 13,000 A4/letter-sized sheets of image information. Additionally, the Canofile reads at a blinding speed of 40 double sided A4/letter-sized pages per minute. And to accommodate irregular sized information such as memos or business cards, scanning single items via manual-feeding is possible.

## SIMPLE AND EFFICIENT

Simple and efficient indexing is

*Continued on Page 8*

## Helping Hand Continued

a very good job of this. Most Contact Management and Marketing Management applications are designed to do very specific tasks - improve the efficiency of the sales cycle, improve customer relations, and take advantage of direct mail and telemarketing more effectively.

Relying on an accounting sub-ledger to handle the hundreds of tasks asso-

ciated with Contact/Marketing Management would be like swatting flies with a brief case - possible but not effective.

### SOFTWARE REQUIREMENTS

When planning out your software needs it is vital that you take into account the size of your database, the output you expect to achieve, your reporting requirements (sales managers that are sticklers for statistics should pay particular attention to this one), flexibility, expandability, and whether or not networking is important.

Research will only make your buying decision the right one. Remember that once you're full swing into setting up the database itself, switching programs can mean a lot of blood, sweat, and tears. Evaluate your needs closely and get everyone that will be involved later on, involved in the pre-buying cycle.

There are many contact management applications on the market today - some of those include The Maximizer, TeleMagic, UpTrends Marketing Manager, and Act! - through proper research and planning you will more than likely make the right decision.

### HARDWARE REQUIREMENTS

This is not an easy topic as it is

dependent upon the type of application you purchase and what its intended purpose is. For example someone buying a Unix based system will require completely different hardware over someone buying a LAN-tastic system.

## "Don't Make Your System So Complex No One Can Use It"

What remains consistent is the devices used to produce output; i.e. the printers. If you

print out the odd letter and don't participate in any form of mass mailers then a 4 Page Per Minute laser such as the Canon LBP-4 will do you just fine. However, if you produce double-sided highly complicated mailers to a number of people, the Canon LBP-8 Mark IIIR will be more up your alley.

If you plan on using laser labels then a dot matrix or Bubble Jet printer isn't a necessity. For us, we use a high speed dot matrix to produce over 2,000 labels per month for our newsletter - laser labels just don't cut it.

### IN CLOSING

Remember these simple rules and you won't mess up:

1. *Select the software package that best suites your overall needs.*
2. *Keep your database up-to-date through constant usage.*
3. *Don't make your system so complex no one can use it.*
4. *Categorize your customers clearly and concisely.*

We have covered a tremendous amount of information, of which we hope you gained from. It is clear that customer database management is a vital tool for most businesses, whether you be a dry cleaning service or an accounting firm doing income taxes.

*Canofile Continued*

another advantage that makes the Canofile 250 such an indispensable asset to your office. The Canofile 250 offers four indexing methods: Index Cell (visual graphics), File Name, File Number, and Date. Each method lets you store, classify and retrieve your information with ease.

**HIGH QUALITY OUTPUT**

The Canofile 250 comes bundled with Canon's Fileprint 100 laser beam printer which produces 400dpi print-

outs at the speed of 4 pages per minute. The high resolution guarantees image information as clear as the originals, and the high-speed printing results in quick and efficient dis-

tribution of information.

**IN REVIEW**

The Canofile 250 is the ideal compact and affordable solution to the urgent need of information management. For further information please contact the ANO office nearest you. This exciting new product will also be featured at the Vancouver Business Computer Show and the U.B.C. Computer Show (See the front cover for further information on these events).
