

Memory Plus – Memory for KIM-1, Sym-1 or custom systems

- First memory expansion for the KIM-1
- Provides both RAM and EPROM support
- Includes 8K Bytes of 8-bit RAM
- Supports up to four 2716 and 2732 EPROMS
- Includes a built-in EPROM programmer
- One 6522 VIA versatile interface adapter for user I/O use
- Dual edge connectors for basic parallel and serial I/O
- Interfaces to AIM65, KIM-1 and SYM1 systems
- PCB is same format as the KIM-1 or SYM1

Note: This is a very old board (1977) that uses the then available RAM which was only 1K by 1 bit! 8 chips made a 1K x 8-bit byte with 64 chips for 8K bytes.
