

Proto Plus – Expand your KIM-1, Sym1 or AIM65

- PCB is same format as the KIM-1 or SYM1
- Has room for over 60 16-pin DIPs
- Universal grid pattern for many IC packages
- Power and ground bus with locations for decoupling capacitors
- Buffer and decoder circuits built-in for easy interfacing
- Special patterns for many discrete components
- Pattern supports wire-wrap and solder connections
- Double-sided etch with plated-through holes
- Gold-plated edge fingers compatible with KIM-1 and Sym1
