SERIES 7000 CIRCUIT MEMO #30

SUBJECT:

EXPERIMENTAL WORK WITH TEMPERATURE

STABILIZATION EQUIPMENT

BY:

Leslie J. Allen

DATE:

August 30, 1957

ABSTRACT:

The idea of utilizing the latent heat of vaporization for dissipating heat and stabilizing the temperature of cores was explored by the circuits group. This report describes the work done by the packaging group to establish the feasibility of using a system employing this principle in a machine.
