MEMO TO: Mr. H. K. Wild  
SUBJECT: 7030 System Card Reader

The 7030 system Card Reader will operate at 1000 cards per minute. However, the feed hopper currently in use will only hold about 1200 cards. Since for large volumes of cards this means operator attention every minute, the question of operator fatigue arises.

In order that this problem be avoided, it is suggested that a file feed be used with the Card Reader. The use of the file feed would help eliminate the operator fatigue problem where large volumes of cards must be handled.
