Dr. Kolsky made a most excellent presentation of the STRETCH project and it was well received.

Due to the high political sensitivity of the R17 report, we were unable to talk about it during the meeting. However, Dr. Nick Smith did give a presentation on the activities of ORO regarding data processing.

Mr. Heble Adams has done most of the programming on the ERA 1103A for the Carmonet project. He indicated that one of the biggest problems in war gaming and/or operational simulation is translating the mathematical program into a machine program. We discussed at length with him the basic concepts of the FORTRAN project. We hope at a later date to be able to arrange a meeting between him and our Mr. Ahlin.
